The plan in one table

Six years, ten lines, every figure calculated from the customers the plan signs rather than typed. Every other document in this folder expands one row of the table below.

$105.3M
REVENUE IN 2031

$58.4M
EARNINGS BEFORE INTEREST, TAX AND AMORTISATION, 2031

835
CUSTOMERS AT THE END OF THE PLAN

$86.6M
CASH AT THE END OF 2031, BEFORE ANY DISTRIBUTION

1 The plan, in one table

	2026	2027	2028	2029	2030	2031	At the end
Capital in	$1,050,000	$1,000,000	$3,500,000	$0	$0	$0	$5,550,000
Customers at the year end	0	65	238	473	645	835	835
Gross new customers	0	69	184	259	214	244	970
Total revenue	$0	$3,879,925	$17,751,792	$44,178,275	$73,714,961	$105,276,946	$244,801,899
Gross margin	0.0%	64.3%	69.9%	73.6%	76.5%	77.6%	75.7%
Operating expenses	($478,165)	($2,792,777)	($7,087,837)	($12,728,162)	($18,037,944)	($23,261,900)	($64,386,786)
Closing cash	$581,835	$1,099,173	$7,320,496	$19,497,264	$45,484,559	$86,616,099	$86,616,099
Runway, months	1.7	1.1	3.6	6.6	11.6	22.2	22.2
Headcount	3	12	23	32	38	47	47
EBITDA	**($468,165)**	**($4,315)**	**$5,536,211**	**$19,967,309**	**$38,401,044**	**$58,393,173**	**$121,825,257**

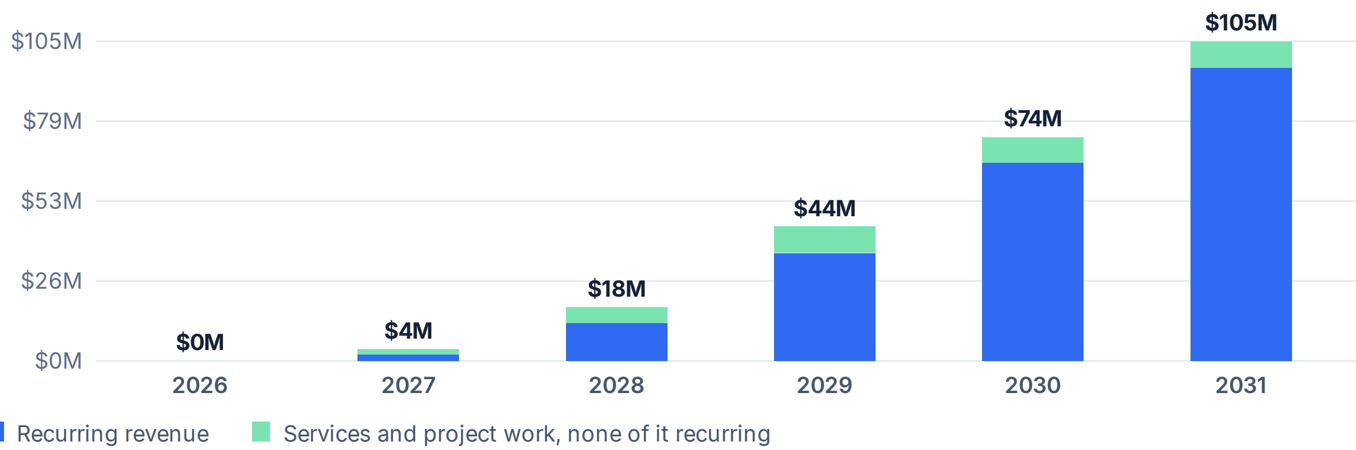
Legend. EBITDA is earnings before interest, tax, depreciation and amortisation, after grants and before tax. **Runway** is closing cash divided by the monthly cost of the year that follows. Negatives in parentheses. Source: the master pro forma, base case, Canadian dollars.

What the six years are for

One line a year. If any of these six is wrong, the model below it is wrong too.

2026, build	The build starts and two design partners are signed. No paid payment provider signs this year, and revenue is nil by design.
2027, the first paying cohort	The full duty set ships and 69 customers are won. Revenue reaches **$3,879,925** and the year ends within $4,315 of breaking even.
2028, the second regulator and the seed	A second rule maker runs on the same build, the round closes, and the year turns profitable at **$5.54M** of earnings on **$17.75M** of revenue.
2029, scale on one engine	259 customers won, the largest year in the plan, and revenue passes **$44.2M**.
2030, margin above seventy per cent	Gross margin reaches **76.5%** as the reconstruction wedge decays and the platform cost is spread across a larger base.
2031, worth a multiple of recurring revenue	The plan closes at **$105,276,946** of revenue, **$96,564,640** of it recurring, and annual recurring revenue of **$108,935,933** at the year end.

2 Revenue by year, and what repeats



Bars start at zero and each one is the year's total revenue, split into the part that repeats next year without a new sale and the part that does not. The recurring share runs from **54.3 per cent** in 2027 to **91.7 per cent** in 2031.

What this model says

Four statements the arithmetic supports, each one checkable on the tab named beside it.

1 The early money reaches the round

The low point on the road to the seed is **($778,960)** in May 2028, and it is stated rather than smoothed. The month by month map runs from the first cheque to two months past the round.

2 Customers are derived, not asserted

New logos are typed by tier on one tab. Every revenue, cost and cash figure downstream is calculated from them, so a reader who disagrees with the customer count can change it and watch the whole plan move.

3 The second regulator is the platform test

Property trust accounting runs on the same engine and the same five screens. If it needs the underlying data to change, the platform claim fails and the cost structure changes with it.

4 It funds without the grants

Eight programmes worth $775,000 are modelled and none is awarded. Switched off, the road still reaches the round, on a deeper low point of $1,123,710.

3 And the four things it does not say

It does not say the penetration is achievable	It says what has to be true. 1,562 payment providers are registered, 745 of them hold customer money and 459 more are waiting for approval. Nobody knows what share will buy, so the plan states the share it needs and names the population it is measured against.
It does not say implementation will be productised	It assumes it. How fast a new customer gets value appears nowhere in the arithmetic, because it can only be observed. The delivery capacity test is the nearest thing to a check on it.
It does not say churn holds at the per tier rates	Losses are typed by size band, three per cent at the top and eight at the widest. Cohort data replaces them as soon as renewals exist.
It does not say the competitive gap holds	Cable sits inside a platform with Canadian distribution and a Schedule I bank behind it. The gap is Canadian regulatory content, submission and price, and it is a finding rather than a moat.

The numbers a reader checks first

The dashboard, in the order the questions usually arrive.

Measure	Figure	What it means
Pre-seed raised	$2,050,000	Five instalments across 2026 and 2027, released against evidence
Seed raised	$3,500,000	The 2028 round, priced on paying customers
Lowest cash before the seed	($778,960)	The low point on the monthly road, in May 2028
Cushion on the pre-seed	-38.0%	The low point divided by the money raised for that period
Runway at the seed decision	1.1 months	Cash at the end of 2027 against the monthly cost of 2028
Average cost a month, 2027	$348,270	Operating expenses and cost of revenue together
Total cash used before profit	$472,480	The deepest the cumulative loss ever goes
Cash at the end of 2031	**$86,616,099**	**Before any distribution to investors**

Legend. Every figure on this page is read off the master pro forma and can be recalculated by anybody holding the workbook.

4 What has to be true before each instalment releases

No.	Who	When	Amount	What has to be true
1	Don H	Aug 2026	$50,000	Committed at incorporation. Already secured
2	Brooks	Aug 2026	$500,000	Build partner engaged and the intellectual property assignment signed
3	Open	Oct-Nov 2026	$500,000	Architecture note accepted, twenty discovery calls, two design partners
4	Open	Feb-Mar 2027	$500,000	Both design partners live and the first paying subscription customer signed
5	**Open**	**Apr-May 2027**	**$500,000**	**Ten thousand a month of recurring revenue across five paying customers**

Legend. Money is released against evidence rather than against a calendar. A lender facility of $500,000 sits beside these five and is switched off in every figure in this folder.

Two numbers decide this plan.

The share of the counted firms that agree to pay, and how long a new customer waits for their first signed reconciliation. The first is why twenty discovery calls come before the build. The second is why the delivery capacity test sits on the face of the model rather than in a footnote.
