

Where Else This Software Sells

We scored 59 groups of Canadian firms that hold money or records for other people. Each group faced the same fifteen tests and the same bar.

1 What this list is for

59 GROUPS SCORED	15 TESTS EACH GROUP	12 OWE IT OFTEN	4 NOBODY SELLING YET
---------------------	------------------------	--------------------	-------------------------

This list asks which other Canadian firms owe a duty shaped like the one our first buyers owe. **It says where to go and ask. It does not say what is true.** Our first buyer is a payment company: a firm holding other people's money in a trust account, which owes a daily reconciliation, called safeguarding in the law. **Twenty calls to real buyers beat every score here.**

Every group in this paper owes the same kind of duty.
Each one holds money or records for somebody else, and each has to show that what it holds is still all there. What changes is how often the duty falls.

2 Words used in this document

These are the only special words in this paper, and nothing later uses one that is not here. They are set out in the order you meet them.

EVERY TERM USED IN THIS PAPER, IN PLAIN WORDS	
Trust account. A bank account holding money that belongs to somebody else. A lawyer holding your house deposit is the everyday example.	Payment company. A business that holds or moves money for other people without being a bank. Payroll firms, money transfer apps and gift card companies. These are our first customers.
Safeguarding. Keeping customer money apart from the company's own money, and being able to prove it.	Reconciliation. Checking two lists against each other. What a company says it holds for customers, against what the bank says is in the account.
Registration. Government permission to operate. A company applies and the regulator decides. Some are turned down.	Regulator. The government body that writes the rules and checks that a company follows them. Ours is the Bank of Canada.
Examiner. The person from the regulator who asks to see the records, usually about a date in the past.	Independent review. An outside firm checking the records. The first one falls due in September 2028 and it looks back three years.
Penalty ceiling. The largest fine a regulator can hand out for one breach. Here it is one million dollars for a serious one and ten million for a very serious one.	Stablecoin. A digital coin meant to hold a fixed value, usually one dollar. The firms that issue them hold real money behind them, so they carry the same duty.
Open banking. New Canadian rules that let you tell your bank to share your data with another company you have chosen.	Evidence store. The place the daily proof is kept. Records go in, get dated, and are never changed.

Confidential. Prepared for a named reader. Please do not pass it on. Every figure is Canadian unless it says otherwise beside the figure. Figures drawn from the financial model of 5 August 2026, base case.

3 What is on each page from here

THE REST OF THE PAPER, PAGE BY PAGE

Page 2. The one duty behind every group, and how the list narrows.

Page 5. The best groups on the score, in a table.

Page 3. What each test is worth, and the test that is not on the list.

Page 6. The whole field sector by sector, and what we hold.

Page 4. The eight groups already in the plan, drawn to the money.

Page 7. Two findings worth more than their rank.

4 The one duty behind every group on this list

THE MIDDLE STEP IS THE SAME IN EVERY TRADE. THAT IS WHY ONE PRODUCT CAN SERVE THE LIST.

	STEP ONE Holds money for somebody else	STEP TWO Checks it against the bank	STEP THREE Keeps a dated record	HOW OFTEN
Payment firms holding a worker's pay	Pay it has not sent yet	Against the bank statement	Kept for eighteen months	Daily
Law firms holding a house buyer's deposit	Deposits held until closing	Against the trust account	Sent to the law society	Monthly
Rent and deposit holders holding a tenant's deposit	Rent and deposits in trust	Against the trust account	Kept for the examiner	Monthly

Every group in this paper holds money that belongs to somebody else, checks it against the bank, and keeps a dated record of the check. The three steps do not change from trade to trade. The clock does. Sources: Retail Payment Activities Act; Law Society trust account rules; provincial rules on rent and deposits held in trust.

5 How the list narrows

FOUR GROUPS CLEAR ALL THREE TESTS, AND THREE OF THEM ARE PAYMENT FIRMS

4

THE TEST AT THIS STEP

Every group we could serve

Canadian firms holding money or records for other people, in one list.

The law says must

A law in force with a date on it, not a guide and not best practice.

And the duty falls as often as it can

Every day, or every month against a hard deadline.

And nobody sells them a tool for it

No firm to push out, and no contract to wait for.

Each bar is as wide as the count beside it, drawn to one scale. The fourth group is mortgage servicing in Ontario, the same duty under a different rule maker. In payments the penalty ceiling is ten million dollars. Source: 4orm Finance market entry list.

WHAT EACH STEP OF THE FUNNEL ABOVE MEANS

The law says must. A law in force with a date on it, not a guide.

Falls as often as it can. Every day, or monthly against a hard deadline.

Nobody there. No firm selling a tool for that duty yet.

6 What each test is worth

TWO TESTS CARRY TWELVE PER CENT EACH: DOES THE LAW SAY MUST, AND IS ANYBODY THERE

WHAT WE ASK OF EVERY GROUP

WEIGHT

Every group was asked all fifteen, and each answer was marked out of five. Five is always the answer that is good for us. Bars start at zero and are sorted by weight.

HOW TO READ THE CHART ABOVE

Test. One of the fifteen questions put to every group.

Weight. How much one answer counts, out of a hundred.

Marked out of five. Five is the answer that is best for us.

7 The test that is not on the list

A GROUP THAT REUSES THE SOFTWARE WE HAVE IS A SECOND PRODUCT. A GROUP THAT DOES NOT IS A SECOND COMPANY.

REUSE

One product, three groups

A second market is a second product.

NO REUSE

Three groups, three builds

A second market is a second company.

A fourth test sits under the fifteen and does most of the work: does this reuse the software we already have? A group needing its own feeds, its own rule book and its own proof file is a build from nothing. Every group named on the next page shares the parts on the left of this drawing.

8

The eight groups already in the plan, drawn to scale

Before asking where else this software sells, it is worth seeing the market we already chose. **These eight groups carry the whole of the modelled market, drawn here to the money behind each one, and each is then asked the same three questions.** Only one group answers yes to all three.

THE THREE TESTS IN ORDER, PUT TO EVERY GROUP

One. The duty is in force today, with a date behind it.

Two. The regulator prints the names, so every buyer can be called.

Three. Priced under twelve thousand, so nobody writes a case.

✓

Size is the wrong way to pick a first market.

The largest group by money sits under rules not yet in force, and the largest by firms is watched by the provinces. We start where the duty is live.

9 The thirteen best groups on the score

#	GROUP	SECTOR	HOW MANY	WHO SELLS THERE	SCORE BAR	SCORE
1	Payment firms on the list, small	Payments	~300 registered	Nobody, for this rule		4.63
2	Payment firms waiting to get on the list	Payments	1,200 to 2,200	Nobody		4.59
3	Payment firms on the list, mid sized	Payments	~80 to 150	Nobody, for this rule		4.57
4	Mortgage servicing firms, Ontario	Lending	242	Nobody. Three firms serve the loan, not the money held		4.46
5	Canadian dollar stablecoin issuers	Digital assets	3 today, 20 by 2031	Big audit firms, by hand		4.34
6	Home sale firms holding deposits, Ontario	Property	3,816	Two book keeping tools, no proof file		4.33
7	Mortgage brokers, Ontario	Lending	1,193	Nobody, just for this		4.19
8	Gaming sites holding player money, Ontario	Digital assets	48 firms, 82 sites	Game platforms keep their own count		4.15
9	Mortgage brokers, British Columbia	Lending	7,000 and up	Nobody, just for this		4.08
10	Travel sellers holding deposits, Ontario	Consumer deposits	~1,900	Nobody for the trust duty		4.07
11	Home sale firms holding deposits, B.C.	Property	No count published	Two book keeping tools		3.99
12	Crypto trading sites	Digital assets	13 on the last list	Advisers, one job at a time		3.94
13	Consumer driven banking accredited entities	Open banking	~680 year one	Nobody		3.91

WHAT EACH TERM MEANS

Group. Canadian firms that all owe the same duty about money they hold for others.

Who sells there. Who sells software there today. Nobody is the best news.

Sector. The wider trade the group sits in, used to group the list.

Score bar. The score drawn as a bar, so the gaps can be seen down the column.

How many. Firms in the group. Where no count is published, the cell says so.

Score. Fifteen answers out of five, weighted and added.

The three groups the plan enters first came first, second and third under a score built before they were chosen. **That is the finding worth keeping.** A group is easiest to reach when the regulator prints its own list, because every name is a buyer and one examiner visits them all.

This is a list of options, not a plan.

Nothing below the top three is funded, staffed or dated. It exists so that when the first product works and the question becomes what next, the answer is already screened.

10 Sectors, by how many groups each holds

PAYMENTS HOLDS ONLY FOUR OF THE 59 GROUPS, AND THREE OF THEM SCORE HIGHEST

Size is not the point of this chart. The two largest sectors both have a tool installed already. The one we sell to first is only fourth largest, and nobody serves it.

THE SIX LARGEST SECTORS, AND WHAT SITS IN EACH

Lending. Mortgage, car and gear loans. New duties, and no tool built for them.

Payments. The three groups we enter first. Nobody there, and the names are public.

Professional trust. Law firms, notaries and trustees. Practice tools already inside.

Property. Rent and deposits held in trust. The same duty on a monthly clock.

Deposit taking. Credit unions and small banks. Reached through a buying group.

Consumer deposits. Travel, funerals and new homes. Two of the four have nobody.

11 Three things we hold that others do not

1 Build bench

Speer Technologies, a named nine person bench working to our design and our tests. Speer states on its own account that it secured twenty five patents for past clients. Groups score well where a small team can ship in months.

2 Legal bench

Counsel at Fasken turns hard rules from a cost into a wall. Rule content we can stand behind, weight in front of a watched buyer, and early sight of what is coming.

3 Money bench

Share law, market and firm advice on the bench. Groups that need a licensed firm or a set way to sell are open to us and would be shut otherwise.

These three benches are what a rival would have to assemble before it could follow us into any of these sectors. **None of the three is bought in a quarter.**

12 Two findings worth more than their rank

The score answers one question: **where should we sell first**. It cannot say whether a thing is true. Two groups landed mid list and hold the two most useful facts in the scan.

1 A Canadian rule maker already takes the file this product makes

The Law Society of Alberta already accepts a file made by a computer from the law firms it watches. That is the closest thing in Canada to what we export, and it runs today. It is our best proof that a Canadian rule maker will take a machine made record, which is what the business rests on. **The group scores 3.55 and ranks twenty fifth of 59**, because no count is published and three practice tools are already installed there.

2 The tightest duty in the scan is not in payments

Trustees who wind up bankrupt firms owe a check every month, due inside forty five days, under a federal order. Across all 59 groups nothing else falls on that tight a clock. **It scores 3.56 and ranks twenty third**, because that is a small group and four case tools are established. It earns this page by showing the same duty far outside payments, on a harder clock than ours.

13 How often the duty falls

A DAILY DUTY FALLS 365 TIMES A YEAR. THE YEARLY RETURN FALLS ONCE.

WHO OWES IT, AND HOW OFTEN

1 Jan

1 Apr

1 Jul

1 Oct

31 Dec

Payment firms

the daily check

365 times a year

Trustees

monthly, due inside 45 days

12 times a year

Rent and deposit holders

the monthly trust check

12 times a year

Payment firms

the return each 31 March

once a year, on 31 March

A yearly duty buys one order. A daily one builds a habit, and a habit is what survives a rival turning up. Each row is one calendar year and every mark is one time the duty falls, drawn on the day it falls. Sources: Retail Payment Activities Act; the federal order on trustees; Alberta Real Estate Act rules on trust money.

WHAT EACH TERM MEANS

Score. Fifteen questions, each marked out of five, weighted and added.

Machine made record. A record a computer builds and a rule maker reads.

Federal order. A written order from a federal body, here the bankruptcy office.

A low rank means do not sell here first.

It never means the finding is worthless. Both groups keep the score they earned, and a list that hides its best proof under a sort order is one nobody should trust.
