10 · Company comparison	Thirty-seven companies on one basis · page 50
Method and sources	Every source code, with a link that opens the original · page 58

EXECUTIVE SUMMARY

What this register establishes, and what it does not.

A single reference for the evidence behind the current deck and the investor master.

What is strongest

Regulators expect customer understanding, appropriate products and demonstrable records. Named businesses report less administration, faster signup and setup, more completed applications and sales, and stronger oversight. These support the need and the operating mechanisms. They do not establish 4orm results.

What is closest

Aveni, Recordsure and MorganAsh already sell into the job this company describes. Part 6 reads all three in detail, because a register that measures 4orm only against governance platforms measures it against the wrong field.

How to read the evidence

Published finding	A regulator, government body, industry association or survey reports a result for a defined group being measured.
Customer case	A vendor or its customer reports a customer implementation result. It is not an independent experiment, a national average or a guaranteed saving.
Company claim	A figure a company publishes about itself, with no independent measurement basis supplied.
Discovery and model	Internal interviews, company history, pricing, market layers and financial scenarios, kept separate from external validation.
Source status	Linked source codes open the original source. D, M, V, N and C identify supplied materials.

Suitability means whether a product fits the consumer's needs, financial circumstances, goals and ability to handle the risks. Annual recurring revenue is repeat revenue expressed as a yearly amount. Customer assets are money held or managed for clients, not company sales. Not verified means not established in the reviewed sources, not zero. Provincial-only market statistics are excluded.

01 · NEWS AND MARKET DIRECTION

Twelve months of movement, all of it dated and sourced.

9 dated developments

Dated findings from Canadian regulators, government bodies and named companies, each with a source that opens.

KEY TAKEAWAYS

- Regulators across securities, insurance and banking published in the same direction inside twelve months.
- Every item carries a dated source that opens to the original.
- Company developments are included where they change the competitive picture, not as endorsement.

Linked source codes open the original source. Dates and observation periods may differ.

NEWS AND MARKET DIRECTION

Current developments and dated findings

10 December 2025. Proving the product fits the consumer.

Canadian Securities Administrators (CSA; coordinates the provincial and territorial bodies that regulate investments) and Canadian Investment Regulatory Organization (CIRO; oversees investment dealers and trading on Canadian debt and equity markets) reviewed **105** firms and found weaknesses in customer information, product assessment and records showing why recommendations were suitable. The 105 is the number of firms reviewed, not a failure percentage.

[R4]

January 2026. Oversight of brokers and agents.

A joint review by Canadian Council of Insurance Regulators (CCIR; brings Canadian insurance regulators together on common issues) identified weak supervision and documentation where insurers sell through brokers and agents. Insurers remain responsible for how those customers are treated.

[R6]

2026. Consumer-controlled financial data sharing.

The Bank of Canada (Canada's central bank) framework supports secure sharing of financial information with approved providers chosen by the consumer. This could help 4orm connect to financial systems; 4orm's approval to participate is not established.

[R8]

---

29 April 2026. Trust software scale.

Vanta (software that helps firms check security practices and show customers the evidence) announced **US$300M** annual recurring revenue and **16,000**+ customers, reaching the milestone nine months after **US$200M**. `COMPANY CLAIM` This validates category scale, not 4orm's growth forecast.

[G1]

4 June 2026. A close comparator raises again, and extends into consumer AI.

Aveni (software that reviews financial-service conversations, checks suitability files and monitors customer outcomes) announced a **£12M** round led by PXN Ventures, with Puma Growth Partners, Lloyds Banking Group, Nationwide and Scottish Enterprise named as existing investors. The announcement describes an extension into consumer-facing agentic AI for financial services. VERIFIED Founded 2018. Its earlier **£11M** Series A was announced 29 July 2024, led by Puma Private Equity.

[G4] [G23] [G24]

4 August 2026. A mortgage network buys a software provider.

Dominion Lending Centres (a Canadian mortgage brokerage network) announced the acquisition of Filogix (Canadian mortgage software connecting brokers and lenders) from Finastra Holdings for **C$58.5M** in cash, subject to closing adjustments. Filogix becomes a wholly owned subsidiary operating independently of Newton Connectivity Systems, which runs the Velocity platform, with both under the same parent. VERIFIED

[G15] [G25]

9 September 2026. Professional work process investment.

Harvey (legal and professional work process software) announced a **US$550M** raise at a **US$15.5B** valuation.

[G6]

10 September 2026. Review the full customer story.

Aveni expanded its checks across the complete customer case, including different communication channels, vehicle financing and insurance. Competitors are already connecting information across the customer relationship, and a claim that nobody joins the complete file would be inaccurate.

[G17]

16 September 2026. Keep evidence behind risk decisions.

Drata (software that tracks compliance tasks and keeps supporting records) announced a tool for assessing risks from outside suppliers, emphasising defensible, evidence-backed decisions.

[G18]

A note on the Aveni funding date.

Aveni's 26 June 2026 article refers to a May raise. Its dedicated funding announcement is dated **4 June 2026**. This register uses the dated announcement and claims no verified closing date. The inconsistency sits between two company pages.

02 · WHAT THE REGULATORS ARE SAYING

Five Canadian regulators, one consistent direction.

10 quoted expectations

Understand the consumer first, offer what fits their circumstances, obtain real agreement, and keep records that show how the assessment was made.

KEY TAKEAWAYS

- Comprehension is becoming the measure of success, not disclosure.
- The documentation gap is named by the regulators themselves.
- None of these regimes requires 4orm, endorses its architecture, or transfers professional responsibility to software.

Linked source codes open the original source. Dates and observation periods may differ.

WHAT THE REGULATORS ARE SAYING

Exact short excerpts, followed by their practical meaning

Financial Consumer Agency of Canada, appropriate products.

FCAC supervises consumer protection at federally regulated financial institutions. **“A Bank should assess the appropriateness of the product or service when it offers or sells it.”** Customer circumstances and product knowledge must inform the assessment. Applies to entities within the guideline's banking coverage.

[R1]

Canada's financial consumer protection agency, consent.

“Banks must ensure that Canadians are only provided with the products and services that they agree to receive.” Agreement must relate to the actual product or service.

[R2]

Canada's investment-dealer regulator, meaningful discovery.

“a Dealer's process for collecting information should amount to a meaningful interaction with the client.” A completed questionnaire alone does not demonstrate a useful discovery process.

[R3]

Canada's council of investment regulators and the investment-dealer regulator, evidence gap.

“many firms lacked sufficient documentation to evidence the KYP assessments performed” Here, KYP means knowing the product's features, costs and risks. The firm needs records showing how it assessed the product.

[R4]

Canadian insurance regulators' council and CISRO, understand needs first.

CISRO is a forum for regulators of insurance agents and brokers. **“Before giving advice, appropriate information should be sought from Customers for assessing their insurance objectives and needs.”** The consumer's needs should precede the recommendation.

[R5]

Quotes are short excerpts from the cited texts. These regimes have different scopes. None requires 4orm, endorses its architecture, or transfers professional responsibility to software.

WHAT THE REGULATORS ARE SAYING

Understanding, distribution, consent and support

Canadian insurance regulators' council, supervision.

“a lack of insurers' robust monitoring and supervision of independent distribution channels” The January 2026 review connects oversight gaps to the relationship between insurers and the agents or brokers selling their products.

[R6]

Canada's financial consumer protection agency, understanding.

“Communicating in ways people understand means using comprehension or understanding as the measure of success.” Measure what the consumer understood, alongside what was disclosed.

[R7]

Bank of Canada, consumer control.

“securely share their financial data with approved service providers of their choice” Consent and approved access matter when reusing financial information.

[R8]

Canada's financial consumer protection agency, tailored mortgage relief.

“Consumers at risk are offered mortgage relief measures that are appropriate to their circumstances, including their financial needs.” A discovered difficulty should lead to a practical support path.

[R9]

Canada's financial consumer protection agency, individual suitability.

“Each mortgage holder's journey is different, and what works for one person may not suit another.” Consumer context changes the right comparison and recommendation.

[R10]

Implication for 4orm, a proposed response.

Start with the consumer. Capture circumstances, goals, reserves, constraints and unresolved questions; let the professional assess options and document the rationale. **Create retrievable evidence.** Connect facts, permissions, explanations, options, decisions and later changes. This is a product hypothesis aligned with the findings, not proof of regulatory compliance. `4ORM TARGET` [D] [C]

03 · CONSUMER PRESSURE AND CIRCUMSTANCES

Large exposure, and a consumer who is uncertain.

C$2.4T residential mortgage debt

Published conditions and consumer-reported experience, kept separate because they measure different populations.

KEY TAKEAWAYS

- Mortgage exposure is large and the arrears level remains historically low. Both are true.
- Consumer-reported uncertainty and national arrears measure different things and are never combined here.
- Self-reported understanding is not an objective comprehension assessment.

Linked source codes open the original source. Dates and observation periods may differ.

CONSUMER PRESSURE AND CIRCUMSTANCES

Observed conditions, forecasts and questionnaire implications

Over C$2.4 trillion.

Canadian residential mortgage debt in December 2025. This measures financial exposure and the importance of decisions; it is not software spending or 4orm total addressable market.

[P5]

0.21% to 0.24%.

National mortgage arrears of 90-plus days increased from October to December 2024 compared with October to December 2025. Canada Mortgage and Housing Corporation (CMHC; Canada's national housing agency) describes the level as historically low. The evidence does not support a claim of record defaults.

[P5]

About 15% higher payments, a forecast.

The Bank of Canada's 2026 assessment projected this average increase over its next 12 months for the remaining pandemic five-year fixed-payment group, about 12% of outstanding mortgages. Most recent renewers had managed increases.

[P1]

20% did not compare lenders; 13% did not know negotiation was possible.

Canada's financial consumer protection agency's mortgage research identifies information and comparison gaps; 37% cited their existing banking relationship as a reason for lender choice.

[R10]

88% researched rates online; 72% used calculators.

Canada's national housing agency's 2026 findings recorded in the full investor deck support a preparation step before the application. Respondents considered roughly two to three providers.

[M]

26% reported process uncertainty; 47% of homebuyers cited uncertainty as a concern.

These are different populations and different questions, and should not be combined.

[M]

CONSUMER PRESSURE AND CIRCUMSTANCES

Turn the pressure into a useful solution

52% bought the maximum they could afford; 32% had unexpected costs.

Canada's national housing agency's 2026 homebuyer findings recorded in the full investor deck support asking about reserves and total ownership costs.

[M]

79% said they understood affordability.

Self-reported understanding is not an objective affordability or comprehension assessment.

[M]

2025 self-reported payment strain.

The master records 51% having difficulty maintaining debt payments, 17% difficulty with mortgage payments and 14% missing a payment. These survey measures are not the national 90-day arrears rate.

[M]

Financial strain, 2025, as recorded in the deck.

53% struggled financially; 33% borrowed for regular expenses; 26% spent more than income; 50% used savings; 48% lacked emergency savings. Responses overlap and must not be added.

[D] [M]

Time to save a down payment.

Canada's national housing agency's 2026: 4.4 years overall and 4.7 for first-time buyers; 28% of first-time buyers used a co-signer other than a spouse. Context for resilience questions, not a default prediction.

[M]

Advice remains relevant.

The master reports 76% receiving financial advice in 2024 and retirement preparation among non-retirees falling from 69% in 2019 to 49% in 2024. Original survey methods should accompany external reuse.

[M]

Information channels overlap.

Canada's national housing agency's 2026: 31% used lender sites, 32% broker sites and 33% comparison sites; 16% of online researchers used digital assistant tools. These are not exclusive shares.

[M]

Questionnaire and professional-review design, proposed

Payment shock.

“If your payment rose to the amount shown, what would remain each month after taxes, insurance, utilities, maintenance and other debt payments?” Use the consumer's actual terms and a plainly labelled scenario.

[V]

Income interruption.

“If your household income stopped or fell for three months, what payments could your remaining savings cover?” Separate savings after closing from the down payment.

[V]

Future fit.

Ask about dependants, leave, relocation, retirement, renovations, other debts, exit penalties and the time horizon. Check missing or conflicting information before recommendation.

[D]

Resolve the gap.

A professional can compare a lower purchase price, a different eligible structure, stronger reserves or a later timeline, explain trade-offs and document why the selected option fits.

[V]

The scenarios are education and discovery tools.

Rates, income shocks and other factors can contribute to strain, but the reviewed evidence does not quantify every cause of default or show that 4orm prevents defaults. `4ORM TARGET`

04 · CANADIAN MARKET SCALE AND GAPS

Counted populations, never estimated ones.

14,100 real-estate establishments

Counted employer establishments and licensed people, held separately. These populations are never summed.

KEY TAKEAWAYS

- Populations are counted from published registries and classification codes, never summed across overlapping definitions.
- Complaints and compensation give the cost of the current state in published figures.
- Provincial-only statistics are excluded from the market view.

Linked source codes open the original source. Dates and observation periods may differ.

CANADIAN MARKET SCALE AND GAPS

National market context and potential buyers

14,100 real-estate employer establishments.

2025 industry classification code 5312: offices of real-estate agents and brokers. Establishments are not unique firms, users or qualified buyers.

[P2]

9,722 insurance employer establishments.

2025 industry classification code 5242: agencies, brokerages and other insurance-related activities. Budget and product coverage still need qualification.

[P3]

6,480 auto-dealer employer establishments.

2025 industry classification code 4411. A possible later group of sales partners, not proven mortgage demand.

[P4]

78 banks and 52 trust and loan companies.

Canada's financial consumer protection agency's 2024-25 federal oversight group being measured; not the total number of Canadian financial institutions.

[R2]

Nearly 30M Canadians protected; 27M with health coverage.

CLHIA (Canadian Life and Health Insurance Association) 2025 facts recorded in the full investor deck. Life and health insurers delivered C$143.3B in benefits and retirement solutions in 2024. Coverage populations overlap.

[M]

1,897,055 new vehicles; 3,778 franchised dealerships.

CADA (Canadian Automobile Dealers Association) 2025 snapshot recorded in the full investor deck, with C$62.9M average dealership sales. Dealership sales are not work process software revenue.

[M]

CANADIAN MARKET SCALE AND GAPS

470,314 residential Multiple Listing Service sales.

CREA (Canadian Real Estate Association) 2025 national transaction count in the master. A transaction denominator, not 470,314 paying software customers.

[M]

245 dealer members; 544M trades worth C$5.387T.

Canada's investment-dealer regulator's financial year 2025 market context recorded in the full investor deck. Trading value is not an addressable software budget.

[M]

22.5B payments worth C$12.2T; 86% digital.

Payments Canada (the organisation operating Canada's core payment clearing and settlement systems) 2024 figures recorded in the full investor deck. These show connected-data scale; they should not be converted directly into record fees.

[M]

Do not sum these populations.

One firm may operate several establishments, and the same consumer may appear across multiple financial sectors.

Canadian gaps beyond mortgages

Insurance understanding.

Ratehub (a Canadian financial-product comparison platform)'s 2025 findings in the master: more than 20% reported weak policy knowledge; over one-third were uncertain about exclusions or had not checked them. Survey evidence, not a measured claim-denial rate.

[M]

Digital car shopping.

TRADER (a Canadian automotive marketplace and dealer-technology business) July to September 2025: 82% researched online; nine in ten were open to a partly online journey and six in ten to a fully online purchase.

[M]

Price pressure affects decisions.

Among tariff-affected auto shoppers in the cited research, 33% delayed, 31% lowered budgets and 33% compared more. These are stated reactions in that group.

[M]

Investment information is fragmented.

Canada's council of investment regulators 2024 Investor Index figures in the master: 53% used social media for investing information, rising to 82% among 18 to 24-year-olds; 46% of Canadians encountered investing information socially. Denominators differ.

[M]

More self-directed participation.

The master records 45% self-directed investors, with 30% of that group opening accounts within two years; 61% used an adviser, down 8 percentage points from 2020. Groups can overlap.

[M]

Trust and confidence are not the same.

Canada's investment-dealer regulator 2024 research in the master: 28% used alternative information; among those users 44% rated it equally valuable and 12% more valuable. Only 21% were very confident about investment objectives.

[M]

Human advice still matters.

IG Wealth Management and Ipsos 2025: 55% said human advice was essential, as cited in the master. It supports professional involvement rather than a fully automated suitability claim.

[M]

Stablecoin knowledge gap.

Canada's financial consumer protection agency survey figures in the master: 21% correctly defined the product; 18% met the knowledge measure; roughly half self-estimated knowledge. 4% currently owned and 5% formerly owned; 32% of never-owners considered buying.

[M]

Fraud exposure.

Canada's council of investment regulators 2024: 23% reported possible fraudulent opportunities. The master also cites Finance Canada: crypto was involved in 60% of C$310M reported investment-fraud losses in 2023. Neither measures recoverable 4orm revenue.

[M]

CANADIAN MARKET SCALE AND GAPS

Cost of weak outcomes and the value of timely support

C$38M+ reimbursed across 745,000+ accounts.

Canada's financial consumer protection agency's 2024-25 work produced reimbursements for consumer and business accounts. This is broad banking correcting errors and compensating customers, not mortgage-only harm.

[R2]

95,000+ at-risk mortgage holders contacted.

By 31 March 2025, institutions had proactively contacted this group being measured, as reported by Canada's financial consumer protection agency.

[R2]

15,000+ mortgage relief measures; C$6M+ in avoided charges.

Canada's financial consumer protection agency reports relief measures and avoided penalties or fees. Measures are not necessarily unique households.

[R2]

26,000+ inquiries and roughly 6,200 investigations and cases.

Ombudsman for Banking Services and Investments (OBSI) 2025 figures recorded in the full investor deck indicate complaint workload. The inquiry and investigation counts are different measures.

[M]

Canada's investment-dealer regulator complaint workload.

The master records 1,345 complaints and 3,889 inquiries for the cited 2025 reporting period. These are not all proven violations.

[M]

C$10.37M in investment-dealer regulator fines.

The master's financial year 2026 figures combine C$6.27M for individuals and C$4.1M for firms. Fines assessed are not necessarily collected.

[M]

2025-26 enforcement by the council of investment regulators.

The master cites C$20.7M in fines and C$59.4M in restitution, compensation and repayment of improperly obtained gains ordered; 763 website alerts and 11,728 deactivated sites. Orders and alerts are different from realised consumer recoveries.

[M]

05 · CANADIAN CUSTOMER CASES

Named Canadian deployments, and what they reported.

11 named Canadian deployments

Published customer results from named Canadian deployments.
Local results, not national averages.

KEY TAKEAWAYS

- Canadian results come from named deployments and are local, not national averages.
- Time and integration results are reported separately from money and adoption results.
- A customer case is a vendor or customer report, not an independent experiment.

Linked source codes open the original source. Dates and observation periods may differ.

CANADIAN CUSTOMER CASES

Named deployments, not national averages

KBH + Docusign, 1 hour per employee per day. CUSTOMER CASE

During the 2020 tax season, staff at this Canadian accounting firm reported this saving, 30,000 printed pages avoided and about 1,100 clients signing digitally. Seasonal performance should not be annualised across a full year. Elizabeth Garbuzov of KBH: **“we finished everyone's tax returns on time without working crazy overtime”**.

[K1]

Wealthsimple + Flinks, thousands onboarded daily, in minutes. CUSTOMER CASE

Bank-connected data supported identity checks, account authentication and fraud detection at this Canadian investing platform. No before-and-after fraud-loss or cost figure was published. Laura Lampe of Wealthsimple: **“With Flinks we're able to onboard thousands of clients daily in a matter of minutes”**.

[K2]

EQ Bank + Flinks, simpler mortgage documents. CUSTOMER CASE

The case describes faster collection and review of bank statements, income and source-of-funds information, transferred to the bank's repository. The saving is qualitative. Paul von Martels of EQ Bank: **“It has made things a lot easier for our clients.”** No published percentage improvement in affordability or defaults.

[K3]

Cornerstone Insurance + Applied Systems, 120 minutes to as little as 5.

Small-commercial processing improved in the customer case recorded in the full investor deck. This is a best-case process figure, not an average for every insurance transaction.

[M]

BrokerTeam and Ogilvy + Applied Systems, less repeated administration.

Both cases describe centralised data, carrier feeds and document capture, freeing staff for personalised service. No quantified saving was retained.

[M]

CANADIAN CUSTOMER CASES

Benefits that reach both sides of the relationship

Wawanesa + CSIO, 100+ daily signups.

The early My Proof of Insurance launch reported this adoption. Adoption is different from hours saved.

[M]

Desjardins + Bain, customer recommendation score up 11 points. CUSTOMER CASE

Expenses fell more than 10% over four years; online-initiated sales rose from 25% to roughly 40%. These were outcomes of a broad transformation, not one software feature. Nathalie Larue of Desjardins: **"Our online experience is a major driver of members' loyalty."**

[K4]

Financeit + Flinks, 70% bank-link adoption. CUSTOMER CASE

In one retailer's direct-to-consumer financing programme, borrowers linked accounts for recurring payments instead of uploading void cheques. Adoption, not a 70% sales increase.

[K5]

Rifco + Flinks, approximately 10% more reported income. CUSTOMER CASE

Management associated faster verification and more application-processing volume with the increase. The case does not isolate the software contribution or define the income metric and period.

[K6]

Lepelco + Applied Systems, 62% and 91% portal adoption.

Personal-lines and commercial adoption respectively; 150% premium growth during the case period, associated with the transformation rather than proven to be caused by the portal.

[M]

KOHO, consumer uptake and a defined credit-building result.

The current site reports 2.5M+ Canadians and a plus-93-point average for a selected group starting at a 440 score. COMPANY CLAIM Not a universal or guaranteed outcome.

[G14]

Wealthsimple, growth in a consumer-led platform.

Power Corporation's April to June 2026 report confirms 3.6M clients excluding tax filers, C$155.6B in assets under administration and approximately C$17B in quarterly net new customer money. Assets and inflows are not company revenue.

[P6]

What this supports.

Consumers adopt digital preparation, data sharing and self-service, and businesses gain capacity. 4orm still has to measure adoption, comprehension, retention and paid demand in its own work process. 4ORM TARGET [D]

06 · THE CLOSEST COMPARATORS

Three companies already sell into the job we describe.

250+

organisations Aveni says it works with across the United Kingdom

Aveni, Recordsure and MorganAsh are not governance tooling or adjacent platforms. They cover adviser productivity, suitability evidence and consumer-supplied assessment, which is the ground this company claims.

KEY TAKEAWAYS

- Aveni is the primary strategic benchmark: a competitor, and a company whose packaging and customer evidence we should model.
- Recordsure covers suitability review and outcomes monitoring. MorganAsh collects assessments from the consumer directly.
- Consumer understanding alone is not a defensible claim of uniqueness. The additional value has to be shown.

Sources read September 2026 unless otherwise stated. Linked source codes open the original source.

THE CLOSEST COMPARATORS

Aveni is the primary strategic benchmark.

A United Kingdom financial-services AI company, founded 2018, selling adviser productivity, suitability-file review and customer-outcome monitoring on one platform.

Founded	2018. VERIFIED Stated in the company's own funding announcement boilerplate, read September 2026.
2024 funding	**£11M** Series A, announced 29 July 2024. Led by Puma Private Equity, with Lloyds Banking Group and Nationwide as new investors, and ParEquity and Scottish Enterprise participating. VERIFIED
2026 funding	**£12M** round, dedicated announcement dated **4 June 2026**. Led by PXN Ventures, with Puma Growth Partners, Lloyds Banking Group, Nationwide and Scottish Enterprise named as existing investors. VERIFIED
Scale	**Over 250 banks, advice networks, wealth managers and compliance providers across the United Kingdom**, on the company's own count. COMPANY CLAIM An organisation count, not a verified count of paying contracts.
Annual recurring revenue	Not established in the sources reviewed. It must not be inferred from funding or from the organisation count.
Deployment history	The June 2026 announcement describes over seven years of live deployments. COMPANY CLAIM
Home market	United Kingdom. No Canadian deployment was established in this review.

A note on the funding date.

Aveni's 26 June 2026 article refers to a May raise. Its dedicated funding announcement is dated **4 June 2026**. This register uses the dated announcement and claims no verified closing date. The inconsistency sits between two of the company's own pages.

[G4] [G17] [G23] [G24] Sources: aveni.ai platform page; aveni.ai funding announcement dated 4 June 2026; Scottish Enterprise release dated 29 July 2024. Read September 2026.

THE CLOSEST COMPARATORS

What Aveni sells, product by product

Its current offering goes well beyond recording conversations. Two of the five products are labelled beta in Aveni's own site navigation, and that distinction is kept visible here rather than presenting every product as equally mature.

PRODUCT	WHAT IT DOES	WHY IT MATTERS TO US
Assist	Captures meetings, structures client information, drafts documents and supports updates to the system of record.	Overlaps discovery, documentation and professional productivity.
File Check	Compares suitability reports, fact finds and recommendations against the underlying conversation, flagging inconsistencies.	Direct overlap with connecting client context to suitability evidence.
Detect	Reviews interactions and complete customer cases for conduct, vulnerability and customer outcomes.	Direct overlap with risk identification, professional oversight and auditable records.
Approve beta	Tests customer-facing AI against policies before deployment.	Relevant to the safeguards around financial AI.
Assure beta	Monitors customer-facing AI interactions in real time and escalates risky behaviour.	Relevant to ongoing supervision of a counselling-centred product.

Approve and Assure are labelled beta in current site navigation. Published capability does not establish independent accuracy, availability to every buyer, or suitability for Canadian rules. [G23] [G26] [G27]

Aveni already joins calls, messages and documents at case level.

Its 10 September 2026 case-level outcome testing announcement describes bringing a complete customer case together across channels, covering motor finance, lending and insurance. Any claim that nobody connects the complete file would be inaccurate. What this register found thin is the consumer-controlled front end and Canadian rule content. [G17]

THE CLOSEST COMPARATORS

Financial firms are already buying less administration and stronger client oversight.

Three named United Kingdom deployments, published by the vendor, each with a starting and an ending measurement on the page.

CUSTOMER AND CONTEXT	PUBLISHED RESULT	WHAT IT SUPPORTS
Key Group United Kingdom, later-life lending and advice	Quality-assurance review fell from **90 minutes** to **15 minutes** per case, using Detect. Aveni's own headline is six times the efficiency of a human-only assessment. That is 75 minutes released, or approximately **83 per cent** less review time, calculated by us from the two reported figures.	Faster review and more capacity to identify cases needing attention. The case describes prioritising flagged reviews and routing possible vulnerability to named champions.
Prosser Knowles United Kingdom, financial planning	Post-meeting administration fell from **2 hours** to **45 minutes**, which Aveni describes as approximately **60 per cent** less administration. Speed to client moved from **4 to 6 weeks** to same day or next day.	Less documentation work, faster client follow-up, and integration into the firm's existing back-office platform, intelliflo office.
Octopus Money United Kingdom, financial advice and coaching	**50 per cent** less quality-assurance review time, **50 per cent** less coach case-building time and a **30 per cent** initial adviser post-meeting administration saving, across roughly **60** advisers and coaches.	Separate benefits for compliance teams, coaches and advisers. These are separate measures and are not additive savings.

CUSTOMER CASE All three are vendor-published customer results, not independently established averages and not measured 4orm outcomes. There is no common experimental design and no comparable cost baseline. [K16] [K17] [K18]

Sources: aveni.ai customer stories for Key Group, Prosser Knowles and Octopus Money, accessed September 2026. Scope: three named United Kingdom deployments. Status: vendor-published.

THE CLOSEST COMPARATORS

Review coverage, read precisely

Octopus Money's current detailed table reports that the team sampled **15 to 20 per cent** of client calls before Detect and now reviews **100 per cent** of interactions. Automated coverage is not the same as a complete human review of every interaction: human reviewers still validate the flagged cases.

[K18] Source: aveni.ai Octopus Money customer story, current detailed table, accessed September 2026. Scope: one named deployment. Status: vendor-published.

What we should model from Aveni

Packaging and proof

- Sell a specific business outcome: less administration, faster review, clearer evidence.
- Package products around the people using them, so the adviser, the reviewer and the compliance lead each see their own gain.
- Publish named customer cases with clear starting and ending measurements.

Delivery and trust

- Integrate into existing systems, and define the data fields and permissions before selecting a connector.
- Keep professional review and accountability visible.
- Demonstrate the consumer benefit alongside the business benefit.

Where we have to be additional.

Aveni is a close global comparator combining adviser productivity, suitability-file review and customer-outcome monitoring. Its products connect conversations, documents and professional workflows, creating substantial overlap with 4orm's proposed evidence capabilities. 4orm must demonstrate additional value through private consumer exploration, scenario modelling, selective sharing and delivery within Canadian financial workflows. `4ORM TARGET` That last sentence is 4orm's proposed differentiation, not an established exclusive capability.

THE CLOSEST COMPARATORS

Recordsure and MorganAsh

Recordsure, with TCC. Suitability review and customer outcomes.

Its current positioning explicitly covers suitability reviews, customer outcomes, client meeting capture, populating the system of record and audit evidence. Its homepage advertises **50% cost savings**, **90%+ right-first-time suitability** and **35% more selling time**. COMPANY CLAIM These are vendor headline claims and should be labelled as such unless a named implementation and a measurement basis are supplied. This is an ongoing competitor to monitor, not a document tool.

[G20] [C4]

MorganAsh MARS. Consumer-supplied assessment and monitoring.

MARS collects assessments directly from consumers, identifies support needs, monitors changing circumstances, offers support pathways and integrates with existing systems. This challenges any claim that competitors only look backward or never start with the consumer. Published starting prices are Standard from £500 a year and Enhanced from £725 a year, each for up to 300 customers, excluding value added tax, with Enhanced including software integration and possible bespoke setup charges.

[G19] [M2]

What this means for the positioning.

Structured consumer assessments, changing-circumstance monitoring and supportive next steps already exist and are purchasable today. Consumer understanding on its own is therefore not a defensible claim of uniqueness. The additional value of private exploration, scenario modelling and a controlled handoff to a professional has to be shown, not asserted. 4ORM TARGET

[D] [C]

Recordsure and MorganAsh figures carried from the September 2026 research brief with their sources named, and not re-fetched in this build. Re-fetch before external distribution. Scope: published vendor pages. Status: company claims.

THE CLOSEST COMPARATORS

The Canadian mortgage field is where the first sale happens.

The software our first customers already open in the morning. Prioritise it over any global comparison.

COMPANY	WHAT IT DOES	HOW TO TREAT IT
Filogix	Expert, Expert Plus and FXLink connect Canadian mortgage brokers to lenders. Acquired by Dominion Lending Centres from Finastra Holdings for **C$58.5M** in cash, announced **4 August 2026**. More than **8,000** brokers connected with approximately **350** lenders, and approximately **C$60B** in funded mortgage volume in the twelve months ended 31 May 2026.	Distribution, and a possible partner. Mortgage volume is not software revenue, and an acquisition price is not fundraising.
Newton Velocity	Mortgage application and document intake, brokerage reporting, compliance packages, and anti-money-laundering risk assessment and monitoring.	Belongs beside Filogix in every Canadian comparison. Run by Newton Connectivity Systems, now under the same parent as Filogix and operating independently.
Finmo, in Lendesk	Borrower intake, verification and compliance features, including published mortgage suitability form functionality since April 2023.	An existing workflow competitor and a possible integration route.
AVA Credit	Mortgage-file tooling with model inventories, usage records, data-handling rules and human review around the file.	Keep the capabilities qualified. They are supported only by the retained internal review; paying-customer progress and financial metrics were not established.
Broki · Blu Mortgage	Broker workflow and client-relationship software, carried as pricing anchors at 99 a month and 1,260 a year respectively.	Separate businesses and separate price points. Confirm currency, plan coverage, tax and current availability before quoting either.

[G15] [G16] [G21] [G25] [C1] [C2] [C3] Sources: Dominion Lending Centres acquisition announcement dated 4 August 2026 and contemporaneous trade reporting VERIFIED; newton.ca Velocity and compliance pages; lendesk.com Finmo platform and help.finmo.ca suitability-forms note dated 18 April 2023. Read September 2026.

07 · GLOBAL CUSTOMER CASES

Firms buy outcome evidence where a duty requires it.

38 global customer results

Vendor and customer reported results on time, sales, resources, reporting and integration. Every one is labelled with its country.

KEY TAKEAWAYS

- Global cases establish that firms buy outcome evidence where a duty requires it.
- Results are grouped by what they measure so unlike figures are not averaged together.
- Best-case vendor results are labelled and never presented as an expected outcome.

Linked source codes open the original source. Dates and observation periods may differ.

GLOBAL CUSTOMER CASES

Faster work and fewer steps

Santander UK + Docusign, 12 days to 2 days. CUSTOMER CASE

Average business-account opening became 83% faster; 39 signup documents became one dynamic form. Business banking, not mortgage suitability. United Kingdom.

[K7]

Vestwell + Docusign, 75 minutes to 5 minutes. CUSTOMER CASE

Agreement preparation fell sharply; the initial implementation saved about 200 staff hours monthly. Embedded down payments also reduced post-signature drop-offs by 70%. United States.

[K8]

Trustmark + Docusign, 3 days faster. CUSTOMER CASE

The bank reported faster service turnaround and 97% completion, with more than half completed on the day of sending. United States.

[K9]

FineMark + Docusign, 4 to 5 hours to 30 minutes. CUSTOMER CASE

Trust-packet preparation involving up to 45 documents became much faster; the case reports a 90% time reduction. United States.

[K10]

First Citizens + Docusign, under one hour. CUSTOMER CASE

High-value legal agreements could be generated, executed and stored in less than an hour. The cited case does not provide a comparable starting measurement. United States.

[K11]

Key Group + Aveni, 90 minutes to 15 minutes. CUSTOMER CASE

Quality-assurance review was about 83% faster, calculated from the reported values. Read in full in Part 6. United Kingdom.

[K16]

Prosser Knowles + Aveni, 2 hours to 45 minutes. CUSTOMER CASE

Approximately 60% less administration, with speed to client moving from 4 to 6 weeks to same day or next day. Read in full in Part 6. United Kingdom.

[K17]

Octopus Money + Aveni, 50% less review time. CUSTOMER CASE

Coverage expanded from a 15 to 20% call sample to 100% of interactions across about 60 advisers and coaches. More coverage is distinct from proven improvement in consumer outcomes. United Kingdom.

[K18]

GLOBAL CUSTOMER CASES

Sales velocity, completion and customer relationships

FirstBank + Total Expert, 20% more loan-officer productivity. CUSTOMER CASE

The customer result recorded in the full investor deck supports work process and follow-up efficiency. United States; vendor-published.

[M]

Prosperity Home Mortgage + Total Expert, US$141M in additional funded loans. CUSTOMER CASE

The six-month case identified 27,904 opportunities from 591,000 contacts. Funded loan principal is not revenue or profit. United States.

[M]

U.S. Bank + Blend, 80,000 affordability-tool users. CUSTOMER CASE

40% of pre-applicants completed an application. This is a completion rate at that step, not a 40% increase in the share of people who become customers. United States.

[M]

Compass Mortgage + Blend, online applications from about 10% to over 50%. CUSTOMER CASE

The case also reports roughly 95% fewer support tickets and a 20% improvement in file quality. United States.

[M]

Clark Knapp + Cox Automotive, 15% higher share of closed sales opportunities. CUSTOMER CASE

The case reports a faster digital-retail journey, with some in-store completion in around 30 minutes. United States.

[M]

BT Business + Pega, 6 percentage points less customer loss. CUSTOMER CASE

The case also reports 1.9% more contract renewals and doubled the share of prospects becoming customers in a targeted mobile campaign. The results use different measures and populations. United Kingdom.

[K15]

GitLab + SafeBase, within Drata, 10 to 14 days off sales cycles. CUSTOMER CASE

The case reports 50% fewer security questionnaires year over year. Buyer-accessible evidence can reduce repeated trust reviews. Global software business.

[K21]

Clay + Vanta and Workstreet, 20% shorter deal cycles. CUSTOMER CASE

A joint compliance and trust implementation supported commercial speed. The whole effect should not be attributed to a single feature. United States.

[K28]

GLOBAL CUSTOMER CASES

Money, resources and avoided effort

Zello + Drata, 700+ hours and $70,000+ annually. CUSTOMER CASE

The case values time saved and reports 234 checks and safeguards, with sales cycles 3 to 14 days shorter. The dollar denomination was not established in the retained report; no currency conversion is made here. United States.

[K20]

MyOutDesk + Drata, capacity comparable to about three roles. CUSTOMER CASE

A reported workload-equivalent benefit, not proof of three redundancies or cash payroll savings.

[K22]

Jellyfish + Drata, 2 to 3 hours saved weekly. CUSTOMER CASE

Faster evidence handling included document access in seconds. Capacity and retrieval benefits should be measured separately.

[K23]

Snowflake + Vanta, 2,000+ hours annually. CUSTOMER CASE

Self-service trust information reduced repeated security-review work. The case supports a shared evidence-access mechanism.

[K24]

Perforce + Vanta, 60% to 15% of team time on compliance. CUSTOMER CASE

The case reports a 75% reduction in that labour burden and 60% less questionnaire work. Reallocated time is not automatically an equal cash saving.

[K26]

Duolingo + Vanta, up to 12 hours weekly. CUSTOMER CASE

A programme manager's reported saving; the case also describes avoided service and hiring costs in the hundreds of thousands without a single precise, comparable cash figure.

[K27]

Consumers Credit Union + Alloy, five dollars of avoided fraud loss per software dollar. CUSTOMER CASE

The customer describes an economic return from fraud prevention. The benefit being counted is avoided loss, not revenue. United States.

[K32]

Separate the benefits.

Released capacity, avoided future hiring, reduced overtime, reduced external spend, faster cash collection and lower realised loss are different outcomes. Count only benefits evidenced in the paying firm's own starting measurement and pilot. [D]

GLOBAL CUSTOMER CASES

Reporting, audit and review coverage

Bancolombia + Workiva, 79 days to 34 days. CUSTOMER CASE

A 57% reduction in data-collection time; 360 hours saved for the 2024 annual United States securities filing work. Colombia.

[K13]

Mineros + Workiva, one month to one week. CUSTOMER CASE

A 75% reduction in the financial-statement cycle in the February 2026 case. Colombia and international mining.

[K14]

Connective + Drata, 4 to 5 months to 5 weeks. CUSTOMER CASE

The customer case reports faster preparation for a SOC 2 examination, which reviews a service provider's controls. It does not establish that a financial product is suitable for a consumer. Australia; mortgage aggregator.

[K19]

GitHub + Vanta, 93% questionnaire automation. CUSTOMER CASE

Reported within six months, reducing repetitive security-answer work. This is automation coverage, not 93% fewer company costs.

[K25]

Samsara + Vanta, 50% faster vendor reviews. CUSTOMER CASE

The update also describes combining overlapping checks from about 820 checks and safeguards across 10 sets of requirements to roughly 260. Counts reflect mapped checks, not eliminated legal obligations.

[G1]

BNP Paribas + Fenergo, reuse customer information. CUSTOMER CASE

The One KYC programme creates a reusable record of customer checks. Launched July 2021 and recognised in Celent's 2022 awards. The retained case summary did not quantify savings. International banking group.

[K12]

Why firms may pay.

Complete records, consistent source information, easier review of unusual cases and fast document retrieval can support audits, complaints and management reports. The examples show how this can work. 4orm must prove extra value beyond a firm's existing tools. 4ORM TARGET [D] [C]

GLOBAL CUSTOMER CASES

Integration, approvals and risk

Raise + Sardine, 98% less manual review. CUSTOMER CASE

Vendor-published result from the global case-study index. This supports automatically identifying cases that need review, not removal of all compliance work.

[K29]

Prezzee + Sardine, up to 70% higher approval rates. CUSTOMER CASE

The index also reports card fraud 50% below the industry average. That comparison is not a 50% before-and-after fraud reduction.

[K29]

Novo + Sardine, 90% fewer payments reversed after a card dispute. CUSTOMER CASE

Reported in the vendor's customer index. Definition, starting measurement and implementation period should accompany reuse as a headline.

[K29]

IncredibleBank + Alloy, 90% of openings automated. CUSTOMER CASE

The case also reports 90% less manual review. These related measures should not be added as separate savings. United States.

[K30]

Suncoast Credit Union + Alloy, 35% lower fraud losses. CUSTOMER CASE

Digital membership completion increased 17% from 2024 to 2025; 98% of login decisions were automated. The case records 269M logins in 2024 and 103,000 digital products opened. A future target of 2.5M members by 2030 is a goal, not achieved growth. United States.

[K31]

Consumers Credit Union + Alloy, 78% signup and setup automated. CUSTOMER CASE

Policy changes became 96% faster. United States.

[K32]

Earnest + Alloy, approvals from 45% to over 70%. CUSTOMER CASE

About 56% relative improvement, rather than 56 percentage points. Policy changes fell from 4 to 6 weeks to 3 to 6 days, reported as 89% faster. United States.

[K33]

Integration lesson for 4orm.

Use consumer-approved data, reuse verified facts and send exceptions to professionals. More approvals are valuable only when the resulting product and risk decision remain appropriate. [D] [C]

08 · TRUST, DISCOVERY AND INTERVIEWS

What consumers report, and what discovery recorded.

9 discovery findings

What consumers report about effort and trust, and what internal discovery recorded without inventing numbers.

KEY TAKEAWAYS

- Consumer effort and emotional burden are recorded as reported, without inference.
- Internal discovery keeps names and numbers as given, and is labelled discovery rather than validation.
- Interview evidence informs the product specification and sizes no market.

Linked source codes open the original source. Dates and observation periods may differ.

What the evidence supports, and what still needs measurement

Less repeated paperwork.

EQ Bank with Flinks and Santander with Docusign show how connected information can reduce document gathering, re-entry and branch or postal steps. Their customer cases support convenience.

[K3] [K7]

Faster access to an answer.

Wealthsimple's signup and setup and the banking agreement cases show shorter waiting and fewer process steps. Faster completion alone does not prove a better financial decision.

[K2] [K9] [K11]

Relationship quality.

Desjardins' 11-point improvement in Net Promoter Score measures customers' willingness to recommend the business. It came from a wider business transformation and is the strongest quantified Canadian loyalty example in this collection.

[K4]

Less employee strain.

KBH's overtime testimony is qualitative evidence of relief. It does not quantify burnout, turnover or mental-health outcomes.

[K1]

Confidence in reporting.

Mineros' case links connected financial reporting to more confidence and an easier audit process. This is operational testimony, not a clinical measure.

[K14]

Fewer in-store steps.

Cox's 2021 United States financing-journey research, recorded in the full investor deck, reports roughly 30 minutes saved by online finance applications and 38 minutes by online paperwork. These are separate measures, not a combined 68-minute promise.

[M]

Consumer understanding.

Canada's financial consumer protection agency explicitly treats comprehension as the success measure. 4orm should test whether users understand payments, costs, risks, alternatives and trade-offs after the experience.

[R7]

Names and numbers preserved without invented quotations

Still unproven for 4orm.

Reduced anxiety, improved trust, lower defaults, fewer complaints, higher customer retention and fewer unsuitable sales require direct measurement. No percentage improvement in those outcomes is established by the reviewed material. `4ORM TARGET`

[D]

Ali AbouDaya, Transactix and CADX.

The August 4 conversation, summarised in the September 7 discovery materials, records C$250-300K in annual external compliance tooling and services spending and C$25-50K as a potential software budget. Management-synthesised interview figures, not audited spending.

[V]

Aly Kassam, ATB discovery conversation.

The supplied synthesis includes an approximately C$100K annual attestation example. It is not verified ATB procurement or an ATB commitment. The original transcript was not recovered; no verbatim quote is asserted.

[V] [D]

Century 21 practitioner, 21 years of experience.

Discovery describes entering information once and moving it through roughly 10 applications, with completeness checks and notifications. It also raises the question of whether the brokerage or the individual agent pays.

[M]

Names and numbers preserved without invented quotations continued

eXp discussion, communication is already captured.

Existing client-relationship communication records are a starting measurement. 4orm needs to show additional context, comprehension and rationale rather than assume communication capture is missing.

[M]

Kevin, automotive vehicle financing and insurance discovery.

The notes describe repeated credit submissions, declines and unnecessary friction. Dealer incentives and consumer benefit need to be tested together; there is no quantified reduction from 4orm.

[M]

Early activity.

The materials describe four partner conversations, 13 compliance registers and approximately C$70K deployed. Conversations are not customers; deployed capital is not necessarily external money raised.

[D] [M]

Founder-history claims.

Hundreds helped, C$10M of losses observed, C$25M of losses said to have been prevented and C$16K in historical revenue appear in the master. These are unverified management statements, not measured platform outcomes or annual recurring revenue.

[M]

Discovery is not validation.

Every figure on these two pages came from an interview, a founder recollection or an internal summary. None of it has been confirmed against a purchase order, a transcript or a financial statement. Recover the originals and the permission to quote before any of it is used outside this company. [D] [V]

09 · PRODUCTS, PRICING AND WHAT MUST BE PROVEN

Anchors, proposals and scenarios, each labelled as what it is.

34 pricing and scenario items

External price anchors, internal proposals and management scenarios, each labelled as what it is.

KEY TAKEAWAYS

- External anchors and internal proposals are different classes of evidence and are shown apart.
- Management scenarios are from the model and are not external validation.
- Items retained for verification are listed rather than promoted.

Linked source codes open the original source. Dates and observation periods may differ.

PRODUCTS, PRICING AND WHAT MUST BE PROVEN

What existing products prove, and the gap

Filogix, Newton Velocity and Finmo hold the Canadian mortgage workflow.

All three already serve broker and lender work processes and offer compliance-related features. Finmo published mortgage-suitability forms in 2023; Velocity carries compliance packages and anti-money-laundering risk assessment. Integration and additional value beyond existing tools are necessary, and Part 6 reads the field in full.

[C] [C1] [C2] [G15] [G16]

AVA Credit, professional tools with oversight and controls.

The competitive review describes model inventories, usage records, data-handling rules and human review around mortgage files. Paying-customer progress and financial metrics were not established.

[C]

Aveni and Recordsure, complete-customer-case evidence.

Both address financial-services monitoring and records showing what happened to the customer; Aveni's 2026 case-level expansion strengthens the overlap. A claim that nobody connects the customer case would be inaccurate.

[C] [G17] [G20]

MorganAsh, consumer understanding and support needs.

Consumer-supplied assessments, monitoring throughout the customer relationship and board reporting overlap with 4orm's proposed approach to customer understanding. It is a meaningful competitor, not a document tool.

[C] [G19]

Drata and Vanta, recurring evidence budgets.

These firms show that companies buy continuous evidence and trust work processes at scale. Their security and compliance categories are examples of similar ways to earn revenue, not direct Canadian mortgage-suitability competitors.

[G1] [G3]

Sardine and Alloy, integration plus risk.

Coordinating data and decisions between existing systems can create value without manufacturing the financial product. Their identity and fraud coverage differs from full consumer suitability.

[G7] [G8]

Pricing and willingness to pay

External anchors and internal proposals are different classes of evidence and are kept apart here.

Proposed 4orm annual firm value, C$30K. 4ORM TARGET

The pilot package combines work process, professional review and a retrievable record, with consumer access included. This is an illustrative price to validate, not a contracted price.

[V]

Firm and transaction pricing in the current deck. 4ORM TARGET

C$6K to 50K+ per firm annually; record options C$15, C$25 and C$39; supervision C$25K to 100K; software connections C$100K to 500K; enterprise C$150K to 500K. These are suggested price ranges, not contracted prices.

[D] [M]

Service prices in the model. 4ORM TARGET

C$3,500 implementation and C$450 evidence-pack assumptions; pack testing at C$250, C$500 and C$1,000. No evidence of completed purchases is established.

[M]

Work process price snapshots.

Broki 99 a month; Blu Mortgage 1,260 a year; SkySlope 340 a month, with Forms 149 a year or 15.99 a month. Currency, plan coverage, tax and current availability need confirmation before quotation.

[M]

Prices for compliance services and extra customer support.

AML Shop with AMBA 5,500 to 10,250; Guardexia £2,500 a month or £27,000 a year; MorganAsh MARS £500 or £725 a year for 300 consumers, plus value added tax. These are different packages and dated price examples, not current quotes.

[M] [M2]

Connection costs used in the financial plan.

Flinks Connect: 500 over 200 equals 2.50 per connection; 1,250 over 1,100 is about 1.14. Enrich: 250 over 100 equals 2.50; 1,100 over 1,250 equals 0.88. Upload: 1,500 over 100 equals 15. Currency and commercial terms need confirmation.

[M]

Identity and signing snapshots.

Veriff 0.80 with 49 minimum; Plus 1.39; Sumsub 1.85 with 299 minimum; Docusign C$40 per user monthly in the master. These are not current vendor quotes or a complete list of direct costs.

[M]

Market estimates and revenue scenarios, not external validation

Practical buyer calculation.

At C$30K annually, saving 500 hours valued at C$60 an hour equals the fee; 1,000 hours equals C$60K of staff capacity, or twice the fee before implementation and other costs. This is an example calculation, not a proven cash return from 4orm.

[V] [M]

C$2.04B strategic ceiling; C$1.77B full-product spending ceiling.

Broader current-product coverage plus estimated spending in other regulated markets, and a ceiling that assumes qualifying firms use all applicable features. Neither is a measured annual market-spend figure.

[V]

C$840.5M total recurring-revenue market; C$490.6M market 4orm could realistically serve.

The earlier financial plan's estimates. A mortgage-first plan needs a separate calculation that another person can check. The five market estimates overlap and cannot be added together.

[V]

Current Year 5 target, C$94.7M. 4ORM TARGET

C$22M firm platform, C$12M enterprise, C$37.5M records, C$9M supervision, C$7M software connections and C$7.2M services. Mixed revenue is not all annual recurring revenue. Assumptions: 1,100 firms at C$20K; 30 enterprise accounts at C$400K; 1.5M records at C$25; 150 supervision accounts at C$60K; 20 customers buying system connections at C$350K.

[D]

Example revenue growth and alternative cases. 4ORM TARGET

Five annual revenues: C$0.715M, C$4.475M, C$16.25M, C$43.625M and C$94.7M. Year 5 alternatives: C$47M conservative and C$175M+ supporting technology case. These are management scenarios, not third-party forecasts.

[D]

Scale claims are not pricing evidence.

Neither the C$2.4T mortgage balance nor a comparable's billion-dollar valuation establishes the revenue 4orm could win, its margins or investor returns. Equity outcomes, dividends and exit multiples in the older materials are scenarios.

[P5] [D] [M]

PRODUCTS, PRICING AND WHAT MUST BE PROVEN

Costs, revenue and what we still need to prove

Cost and margin for each record.

The plan assumes C$4 to 12 in direct costs per record. After those costs, a C$25 price leaves 52 to 84% of revenue; C$15 leaves 20 to 73%; C$39 leaves 69 to 90%. Other company expenses still have to be paid. A 70 to 80% margin is not automatic.

[M]

Planning assumptions that still need proof.

The plans assume 80 to 85% gross margin; C$35 to 42M earnings before interest, taxes, depreciation and amortisation; and C$39 to 44M operating expenses. Also 86% margin on repeat revenue and 55% on services; C$4,200 to acquire a customer; 10% customer loss; 3% price increases from 2029; paid records on 55% of eligible transactions; and 0.6 evidence packs per firm each year. These planning versions need to be reconciled.

[D] [M]

Pilot scale.

The deck proposes 5 to 10 paid firms and 100 to 250 records, which is not achieved traction. Record the starting results before the pilot.

[D]

Consumer measures.

Comprehension before and after; unresolved questions resolved; permissions understood; record-view rate; perceived effort; appropriate professional connection; ability to explain key consequences.

[N] [D]

What to measure for the business.

Review time after allowing for extra tasks; repeated work; missing or conflicting information; record completeness; time to rebuild a transaction history; setup effort; support requests; customers who pay; and willingness to renew.

[N] [D]

Targets to test. 4ORM TARGET

Paid records used on 50% of eligible transactions by month 3; 70% reuse of core product components; 20% time saving after allowing for extra tasks, or a 20% quality improvement; 50% of consumers viewing their record; and 60% of pilot customers choosing an annual contract. Aim for setup within 14 days, then 7, and 70% of record revenue left after direct costs, then 80%.

[D] [M]

When to stop and rethink the offer.

The deck flags fewer than 25% of prospects paying; paid records used on fewer than 30% of eligible transactions; less than 65% of record revenue left after direct costs; customer value below twice the fee; record views below 30%; reusable components below 50%; or more than 10 to 15 manual minutes per record. These are proposed tests, not observed results.

[D] [M]

Items retained for verification

Claims in the research that should not be promoted as established facts yet.

Office of the Superintendent of Financial Institutions, E-23.

The September 18 direction report describes a September 2025 final guideline, effective 1 May 2027, covering enterprise model governance, documentation and accountability. The exact primary release and coverage were not recovered in this refresh; retain as a follow-up source item.

[N]

OECD March 2026 guidance.

The report describes updated consumer-protection approaches covering circumstances, needs, explanations and retained information. The exact publication was not independently recovered here.

[N]

Legislative and payment-supervision dates.

The earlier report cites Bill C-15 Royal Assent on 26 March 2026 and 2026 payment-supervision enforcement activity. The individual legislative and enforcement events require primary confirmation.

[N] [R8]

September professional-platform launch.

The direction report cites a 14 September 2026 adviser work process launch and connections to BlackRock, Charles Schwab, Addepar, Envestnet, Orion and Wealthbox. Original announcement and reporting were not recovered here. Do not use as a verified news headline from this register.

[N]

United Kingdom consumer-model trust finding.

The report cites a July 2026 Financial Conduct Authority-related finding that over one-quarter trusted general-purpose tools for financial advice. It is international, and the original group being measured and methodology remain to be confirmed.

[N]

Other national figures that need source checks.

The full deck cites 1.33M new mortgage loans worth C$413.25B in 2025; roughly one-third of consumers using mortgage professionals; approximately 9M people sharing account data through online-banking login access; and roughly 10% bitcoin ownership. Confirm the original national sources and definitions before external reuse.

[M]

Exact interview quotations.

Ali and ATB spending evidence is preserved as attributed synthesis. Recover original transcripts and permission before using quotation marks or implying institutional endorsement.

[V]

10 · COMPANY COMPARISON

Thirty-seven companies, on one basis.

37 companies compared

Funding, recurring revenue, customers and relevance, with not verified used where the sources did not establish a figure.

KEY TAKEAWAYS

- One basis across thirty-seven companies: funding, recurring revenue, customers and relevance.
- Not verified means the reviewed sources did not establish the figure, not that it is zero.
- Customer assets held or administered are never treated as recurring revenue.

Linked source codes open the original source. Dates and observation periods may differ.

COMPANY COMPARISON

Canadian mortgage and financial software

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Filogix	Not verified	Acquired by Dominion Lending Centres from Finastra Holdings for **C$58.5M** cash, announced 4 Aug 2026, subject to closing adjustments	Not verified	**8,000+** brokers; approximately **350** lenders and other participants; approximately **C$60B** funded volume, 12 months to 31 May 2026	Mortgage work process and distribution. VERIFIED [G15] [G25]
Newton Velocity	Not verified	Owned by Dominion Lending Centres; operates independently of Filogix	Not verified	Not verified	Application and document intake, brokerage reporting, compliance packages, anti-money-laundering risk assessment. [C2]
Finmo, in Lendesk	Suitability forms published 2023	Not verified; brand metrics not separated	Not verified	Not verified	Borrower intake, verification, compliance and suitability forms. [C] [G16] [G21]
AVA Credit	Not verified	Not verified	Not verified	Live-file proof of concept in review; no paid-user count	Mortgage workbench with human review. [C]

COMPANY COMPARISON

Canadian mortgage and financial software continued

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Broki, Blu Mortgage	Not verified for each	Not verified for each	Not verified for each	Not verified for each	Separate broker work process pricing comparisons, not one business. [M]
Flinks	Not verified	Not verified	Not verified	**15,000+** institutions connected; **1M+** monthly connections	Data integration. Connections are not paying customers. [G13]
Wealthsimple	2014	C$750M round, Oct 2025; total not verified	Not verified; customer assets are not recurring revenue	**3.6M** clients; **C$155.6B** assets, Apr to Jun 2026	Consumer-led distribution and product expansion. [H1] [P6]
KOHO	Not verified	130M new capital; 1.33B valuation, Jun 2026; currency not specified there	Not verified	**2.5M+** Canadians, current site	Consumer subscription and credit building. [H5] [G14]

Newton Velocity is new to this comparison. The Filogix broker count is the figure given in the 4 August 2026 acquisition announcement.

COMPANY COMPARISON

Suitability, consumer understanding and record review

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Aveni	2018	£11M Series A, 29 Jul 2024; £12M round announced 4 Jun 2026, led by PXN Ventures; total not verified	Not established in the reviewed sources	Over 250 banks, advice networks, wealth managers and compliance providers across the United Kingdom, company-reported. Named customers: Key Group, Prosser Knowles, Octopus Money	The closest strategic overlap: adviser productivity, suitability-file review and case-level outcome monitoring. VERIFIED on founding and funding. [G4] [G17] [G23] [G24] [K16] [K17] [K18]
Recordsure, with TCC	Not verified	Not verified	Not verified	Not verified	Suitability review, meeting capture, outcomes monitoring and audit evidence. Homepage claims 50% cost savings, 90%+ right-first-time suitability and 35% more selling time, unqualified. COMPANY CLAIM [G20] [C4]
MorganAsh	Business history from 2004; MARS launched 2022	Not verified	Not verified	PayPlan and Match the Cash are named deployments; total customers not verified	Consumer-supplied assessment, support needs, monitoring and reporting. Published pricing from £500 a year. [G19] [M2]

COMPANY COMPARISON

Suitability, consumer understanding and record review continued

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Fenergo	Not verified	Ownership-backed business; financing total not verified	Not verified	BNP Paribas One KYC case; overall count not verified	Client lifecycle and reuse of institutional client records. [K12]
Applied Systems	Not verified	Private ownership; funding total not verified	Not verified	Canadian case customers include Cornerstone, Lepelco, BrokerTeam and Ogilvy	Established broker work process and self-service; integration and bundling threat. [M]
InvestCloud	Not verified	Not verified	Not verified	Not verified	Wealth-management work process adjacency. [M]

These three sit closest to the job 4orm describes and belong at the front of any competitive conversation. Part 6 reads all three in full. Aveni is the only one of the three with a verified founding year, two dated funding rounds and three named customer deployments carrying published starting and ending measurements. Recordsure publishes percentages without a named implementation, and MorganAsh publishes a price list without a customer count.

COMPANY COMPARISON

Trust, professional work and risk

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Drata	2020; launch about 2021	Funding total not verified in reviewed sources	**US$100M+** reached in 2025	**8,500+** customers on current site; 8,000+ in Nov 2025	Continuous compliance and trust technology. [G9] [G10] [G3]
Vanta	2018	US$150M Series D; US$504M total; **US$4.15B** valuation, Jul 2025	**US$300M**, Apr 2026	**16,000+** customers; 400+ integrations	Large recurring evidence category; nine months from US$200M to US$300M. [G1] [G2] [G22]
Harvey	2022	US$550M round; **US$15.5B** valuation, Sep 2026; total not verified	US$100M+, Aug 2025; later figure not verified	500+ customers in 54 countries, Aug 2025; 80% of the AmLaw 100, Sep 2026	Professional work process scale; customer and revenue periods differ. [G5] [G6]
Sardine	2020	US$170M total, current company page	Not verified	450+ enterprises	Fraud, anti-money-laundering and transaction monitoring; capital is not revenue. [G7] [D]
Alloy	2015	US$52M round at US$1.55B valuation, Sep 2022; total not verified	Not verified	900+ financial institutions and fintechs	Identity and risk coordination. Distinct from Alloy Automation. [H2] [G8]
Workiva	2008; first cloud product 2010	Public company; total financing not compiled	Not verified in reviewed primary profile	6,700+ customers; 85% of the Fortune 1000; 97% gross retention, Apr to Jun 2026	Reporting and evidence technology; retention is not revenue growth. [G11]

COMPANY COMPARISON

Business software, systems and other providers

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Docusign	2003	Public since 2018; total financing not compiled	US$2.98B financial year 2025 revenue, secondary profile; not recurring	1.9M+ paying customers; 1B+ users; 1,000+ integrations	Agreement work process; global scale and named time-saving cases. [H4] [G12]
Pega	Not verified	Public company; financing not compiled	Not verified in reviewed material	BT Business case; overall count not verified	Decisioning and retention coordination. Broader platform threat. [K15]
Total Expert	Not verified	Not verified	Not verified	FirstBank and Prosperity cases; overall count not verified	Client-relationship-driven mortgage opportunity identification. [M]
Blend	Not verified	Public company; financing not compiled	Not verified in reviewed material	U.S. Bank and Compass cases; overall count not verified	Digital mortgage intake and consumer preparation. [M]

COMPANY COMPARISON

Business software, systems and other providers continued

COMPANY	STARTED	FUNDING OR VALUATION	RECURRING REVENUE	CUSTOMERS OR SCALE	RELEVANCE AND SOURCE
Cox, Dealertrack, RouteOne	Separate businesses; brand dates not verified	Parent or consortium ownership; funding not comparable	Standalone product recurring revenue not verified	Clark Knapp case; total product counts not verified	Auto retail and finance work process; not three independent startup comparables. [M]
SkySlope	Not verified	Not verified	Not verified	Not verified	Real-estate transaction records; pricing anchor retained. [M]
Plaid	Not verified	Not verified	Not verified	Not verified	Financial-data connections; supplier or integration alternative. [M]
Neo Financial	2019	C$362M round: C$112M equity and C$250M debt, Nov 2024	C$75 to 100M revenue, 2023, reported range; not recurring	1M+ customers last reported 2022; no current count verified	Calgary consumer-finance comparable. [H3] [H6]

Veriff, Sumsub, Guardexia, AML Shop, Borrowell, EQ Bank, Transactix, Stablecorp and Tetra are retained in the workbook with not verified against each field. They carry no figure this register can stand behind.

POSITIONING

What we say, now that the field is named.

The positioning of record.

Established platforms already help financial firms capture conversations, automate administration, review suitability and evidence customer outcomes.

4orm is building counselling-centred AI that helps people privately explore their goals, circumstances, possible outcomes and risks, then choose what to share with the business serving them.

That shared understanding is designed to fit into the firm's existing workflow, reduce repeated discovery and support a clear record of the professional's reasoning.

Our opportunity is to prove that this approach gives firms better client understanding and measurable operating value beyond the tools they already use.

What the evidence will and will not carry

The evidence carries this

- Regulators expect understanding, appropriate products and demonstrable records, in their own words.
- Firms pay for less administration, faster review and ready evidence, in named deployments with published measurements.
- The Canadian populations are counted, not estimated.

The evidence does not carry this

- That nobody connects the complete file. Aveni does, at case level.
- That competitors only look backward. MorganAsh collects from the consumer directly and monitors changing circumstances.
- Any 4orm outcome. No comprehension, retention, complaint or default result has been measured for this product.

Scope: how this register should be used when the company is discussed. Status: management direction, September 2026.

H1 to H6	Secondary company profiles, used only where no primary source was established	various

Access basis.

G23, G24 and G25 were confirmed against their primary pages on September 2026. C2, C4 and M2 are carried from the September 2026 research brief with their sources named, and were not re-fetched in this build. Re-fetch all six before external distribution and retain dated snapshots: live pages change.

Customer cases describe particular deployments. They are not national surveys or independent causal studies. Annual recurring revenue is a recurring-revenue run rate, not profit. Not verified means the reviewed sources did not establish the metric, not that the value is zero. None of the named companies is presented as a 4orm partner or endorser.

4orming trust into financial decisions.
