

4orm Mission Anchor

The standing charter for what 4orm is building, what it must protect and how the company makes consequential decisions.

Founder-level governance document

Adopted September 2026

Reviewed at least annually

4orm Finance · Confidential

Chad R. Johnston, Founder and Chief Executive, 4orm Finance

A vision, a boundary, a test and a measure. The parts of this charter that should not move.

Vision and what we are building	What 4orm connects, and what each side of the decision gets.	3
The shared record of understanding	Nine questions a decision should be able to answer years later.	4
Boundary principles	Eight principles that order our choices.	5
Values	Nine operational commitments.	6
Our non-negotiable boundaries	Nine things we will not do.	7
The founder test	Ten questions before a material decision, and the rule that follows.	8
Founder stewardship and a living charter	How the purpose is carried and protected.	10
How the mission becomes measurable	Nine indicators that test the mission, not the usage.	11
Governance purpose, adoption and review	What this charter governs, and what it does not.	12

A decision entered informed and prepared.

A financial system in which people can enter major decisions informed and prepared, and businesses can serve them with less administrative friction, stronger relationships and evidence that stands up over time.

What we are building

4orm connects the person, the professional and the evidence around a consequential financial decision. It is designed to strengthen understanding before commitment and preserve the story behind the decision afterward.

FOR PEOPLE

Sovereignty

A person's financial life and personal information should remain theirs. 4orm should strengthen their ability to understand, decide and act without surrendering unnecessary control.

Privacy

Personal information should be collected with purpose, protected carefully and shared only within clear permissions and lawful requirements.

Autonomy

People should have the space, information and tools to explore a decision, ask questions and reach their own informed conclusions.

Understanding

Clear language, education and exploration of goals, affordability, risks, trade-offs and long-term consequences.

FOR BUSINESSES

Context

A stronger picture of the person's goals, needs, risks, concerns and understanding.

Evidence

A durable record of what was known, explained, considered, recommended and agreed.

Less rework

Information organized as the work happens so teams spend less time reconstructing the file later.

Relationship

Technology that helps professionals understand people better and supports the human relationship rather than replacing it.

The value is the meaning, not the data.

The long-term opportunity is not to collect more data. It is to preserve the meaning behind a decision, the person's circumstances, questions and understanding together with the professional's explanations, reasoning and actions.

The shared record of understanding

- 01 What is the person trying to accomplish?
- 02 What matters to them now and over the long term?
- 03 What can they afford today, and what could change later?
- 04 What risks, trade-offs and uncertainties matter?
- 05 What did they understand, question or want clarified?
- 06 What was explained or recommended, and why?
- 07 What alternatives were considered?
- 08 What was agreed, shared or approved?
- 09 Can both sides retrieve the evidence years later?

Eight principles that order our choices.

People before products	The decision begins with the person, not the product a business wants to sell.
Understanding before consent	A signature or click is not a substitute for comprehension.
Truth before transactions	We state what is known, what is uncertain and what still needs to be verified.
Proactive before reactive	We look for risks, gaps and misunderstandings before they become harmful outcomes.
Education before pressure	People should have the information and space to explore a consequential decision.
Evidence while it happens	Important reasoning, explanations and acknowledgements should be preserved during the process, not reconstructed later.
Human relationships matter	Technology should strengthen understanding between people, not remove the human responsibility within consequential decisions.
Long-term over short-term	We consider the future consequences for the person, the relationship and the company, not only completion of the transaction.

Nine words we are accountable to.

Truth

Sovereignty

Privacy

Autonomy

Security

Good faith

Stewardship

Discipline

Service

These values are operational commitments. They must be visible in the product, our contracts, how we handle information, how we treat people, who we partner with and how we respond when doing the right thing is harder than doing the convenient thing.

Nine things we will not do.

These are stated as refusals because a boundary that bends under pressure is not a boundary.

- We will not sell, rent or exploit personal information for unrelated advertising, profiling or behavioural manipulation.
- We will not collect or retain information without a defined purpose, appropriate safeguards and a lawful basis.
- We will not intentionally use technology to pressure, manipulate or make a consequential financial choice for a person.
- We will not present a score, search, recommendation or system output as a guarantee of safety, suitability or future performance.
- We will not conceal material limits, conflicts, uncertainty or errors in the product or evidence record.
- We will not design systems that remove meaningful human review from consequential financial decisions where human judgment remains required.
- We will not weaken sovereignty, privacy, security, evidence integrity or lawful compliance to reach a launch date, growth target or valuation.
- We will not accept capital, partnerships or commercial terms that require 4orm to abandon these commitments.
- We will meet lawful obligations and use proper legal process when requests for information appear overbroad, unsupported or inconsistent with the rights of affected people.

Ten questions before a material decision.

Before a material product, market, partnership, capital, data or governance decision is approved, ask:

- 01 Does this help a person understand a consequential financial decision better?
- 02 Does it preserve or strengthen the person's sovereignty, privacy and autonomy?
- 03 Does it help the business understand the person and the relationship better?
- 04 Does it create or preserve better evidence of what happened and why?
- 05 Does it identify or reduce avoidable risk before harm occurs?
- 06 Does it reduce work without weakening professional judgment, accountability or human review?
- 07 Is the use of information clear, necessary, secure and permissioned where required?
- 08 Does this support the person's long-term interests rather than merely completing today's transaction?
- 09 Can we explain the decision honestly to the person affected, the business, a regulator and our own team?
- 10 Would we still support this decision if it became public?

DECISION RULE

If the answer is no, unclear or dependent on hiding a material fact, compromising a core value or taking control away from the person without justification, we pause. We do not force the decision through.

Growth is important.

Growth is not the North Star.

We carry this work as stewardship under God. We are accountable for the truth we tell, the systems we build, the information entrusted to us and the consequences of our decisions. We serve; we do not rule. We do the uncomfortable work, protect the person and the relationship, think beyond the transaction and build for the long term.

Stewardship means protecting the purpose of 4orm through changes in products, markets, leadership, financing and ownership. Growth is important, but growth is not the North Star.

A standing, living charter

This Mission Anchor is intended to remain a standing mission document for 4orm. It is not a campaign, product description or one-time mission exercise. It should be revisited as the company learns and grows, while protecting the principles that should not move.

What may change, and what should not.

The language may become clearer. The products may change. The markets may expand. The technology will evolve. The central purpose should remain constant: give people greater understanding, sovereignty and agency in major financial decisions, strengthen the relationships around those decisions, and preserve evidence that can be trusted.

The mission is testable, not just the usage.

The mission should be measurable over time. 4orm should track outcomes that show whether the company is actually improving the quality of decisions and relationships, not simply whether people are using the software.

- Consumer comprehension before a major commitment.
- Whether people report greater clarity about goals, affordability, risks and trade-offs.
- Quality of consent and meaningful control over information sharing.
- Evidence completeness and the ability to retrieve the reasoning behind a decision.
- Administrative time and rework reduced for businesses.
- Quality of professional understanding of the person.
- Security and privacy outcomes.
- Complaint, dispute and remediation outcomes.
- Long-term indicators that show whether the system is helping people make more sustainable financial decisions.

What this charter governs, and what it does not.

Governance purpose

This Mission Anchor is the standing founder-level statement of purpose, values, boundaries and decision discipline for 4orm. It should guide product design, hiring, partnerships, capital, data practices, governance and future strategic choices.

It is not, by itself, a substitute for the Company's Articles, bylaws, shareholder agreements, privacy program, regulatory obligations or board resolutions. Where the founders intend these principles to have binding legal effect, the appropriate protections should be drafted into the relevant corporate, contractual and governance documents by qualified counsel.

Adoption and review

The founders and directors should review this Mission Anchor at least annually and whenever 4orm materially changes its core product, jurisdiction, control structure, regulated activities or ownership. Changes should clarify or strengthen the Charter, not quietly remove its central protections.

PERMANENT ANCHOR

Help the person understand the decision before it is made. Protect their sovereignty, privacy and autonomy. Give the business clear evidence of what happened, why it made sense and what was agreed.

4orming trust into financial decisions.
