

From validation to a repeatable mortgage revenue engine.

The objective is not more features. It is a repeatable path from design partner to paid customer to recurring revenue, then platform reuse.

FOUNDER

Validate the buyer before scaling the build

4ormIQ is live. Speer discovery and design run Oct to Dec. Mortgage design-partner and paid-discovery conversations continue. First salesperson starts in November. Base model assumes **C\$0** revenue in 2026.

Q1 2027

BUILD

Build the saleable mortgage workflow

Speer mortgage build begins in January. Complete the end-to-end workflow, define onboarding, and prepare controlled customer use. Client relations starts in March. Exit gate: product ready for paid delivery.

APR TO JUN 2027

CUSTOMER

Turn controlled pilots into paying customers

Paid delivery begins in April. Target model earns about **C\$79.4K** a month. With a two-month collection delay, first customer cash is modeled in June. Convert early customers and measure operating value.

Source: 4orm Pre-Seed Pro Forma (28 Sep 2026) and Investor Financial Summary (Oct 2026). Management targets and planning assumptions, not forecasts.

Prove the motion repeats, then scale.

JUL TO SEP 2027

SALES

Prove the revenue motion repeats

Second salesperson starts in July. Show repeat use, customer references, delivery cost and implementation effort. Keep mortgage as the proof market before broad vertical expansion.

Q4 2027

REVENUE

Finish the year at the C\$715K target

2027 model: C\$240K core platform, C\$100K enterprise, C\$125K Decision Records and C\$250K implementation. No supervision or API revenue is assumed in 2027.

Q1 2028

SCALE

Enter the scale phase with a larger run-rate

The 2028 model steps to about C\$372.9K a month and a C\$4.475M full-year target. Scale only where customer demand and reuse economics are demonstrated.

Source: 4orm Pre-Seed Pro Forma (28 Sep 2026) and Investor Financial Summary (Oct 2026). Management targets and planning assumptions, not forecasts.

How the first C\$715K is built.

2027 management target. Paid delivery begins in April, and consumer subscriptions are excluded from the base case.

01

C\$240K

REVENUE PLATFORM BUILD

12 average firms at C\$20K annual platform fee.

02

C\$100K

ENTERPRISE AND NETWORK

1 average enterprise customer at C\$100K annual fee.

03

C\$125K

DECISION RECORDS

5,000 paid records at C\$25.

04

C\$250K

IMPLEMENTATION

10 paid implementation projects at C\$25K.

C\$715K

2027 TOTAL REVENUE TARGET

Earned across Apr to Dec 2027 in the target model, approximately C\$79.4K per paid month.

Source: 4orm Pre-Seed Pro Forma (Revenue and Cash Plan). Management target case, not a forecast.

What has to be true before we call it repeatable.

Five commercial proof gates. Each one is measured before the motion is called repeatable.

Paid conversion	Design partners and controlled pilots convert to paying customers.
Value measured	Net staff time, review effort, evidence completeness and reconstruction time are measured.
Pricing validated	C\$20K platform ARR and C\$25 per Decision Record survive paid customer negotiation.
Delivery repeatable	Onboarding, support and implementation effort are known and do not require a custom rebuild.
Reuse proven	A second vertical can reuse the core architecture instead of becoming a second product stack.

Entering 2028

C\$4.475M

2028 FULL-YEAR MANAGEMENT TARGET

C\$372.9K a month. Model assumptions: 70 average core firms, 3 enterprise, 50K records, 25 implementation projects.

Supervision and API revenue begin in the 2028 target model. Expansion follows demonstrated demand.
