

4ORM IQ - CORE SYSTEM

One identifier in. A source-backed record out.

4ormIQ builds a record from public evidence. It keeps the source, date, coverage and uncertainty visible - and never turns the result into a trust score.

**THE INVARIANT**

The system describes the evidence. It does not decide whether a company is safe, good or fraudulent.

WHAT THE PERSON EXPERIENCES

Check. Understand. Open the evidence yourself.

The consumer sees a simple journey. The complexity stays underneath.

ILLUSTRATIVE RESULT - SOURCE WEIGHT STAYS VISIBLE

OFFICIAL RECORD No warning located No official action found in sources reached.	CONSUMER SIGNAL Repeated withdrawal complaints Consumer reports remain allegations.	COVERAGE 2 applicable sources unreachable Unreached sources remain visible.	MEANING Worth a closer look - not an official finding Open the sources and decide what to do next.
---	---	---	--

A signal is not a fact. An allegation is not a finding. No warning is not proof of safety.

Report first. The source board, method and full working sit one click behind it.

ENGINE SEQUENCE

Retrieval first. Interpretation second.

PLAN

1 NORMALIZE

Understand what was entered.

2 CLASSIFY

Determine party type, vertical and jurisdiction.

3 SOURCE PLAN

Select only sources that could apply.

GATHER

4 RETRIEVE

Direct connectors, source-restricted search and research objectives.

5 RESOLVE + EXPAND

Confirm the party. Search new identifiers found in round one.

RETRIEVAL LOCK

The source ledger freezes here.

Downstream logic cannot add a source retrieval did not find.

INTERPRET + PUBLISH

6 RUN THE TEN CHECKS

Apply the same questions to every party. Unresolved checks remain visible.

7 APPLY AUTHORITY + RULES

Control what each source may mean and which combinations may support a finding.

8 COMPOSE THE RECORD

Explain evidence, coverage and uncertainty. Apply the publication gate separately.

ENGINEERING RULE Providers are replaceable. The control sequence, rules and evidence boundaries are the system.

THE TEN CHECKS

Same questions. Every party.

One record. Ten independent checks. If a check cannot run, it stays unresolved and names the sources behind it.

1

Identity + existence

Does the legal entity exist?

2

Registration + licensing

Does it hold what it claims?

3

Regulatory + enforcement

Warnings, alerts, sanctions.

4

People + ownership

Who is publicly connected?

5

Legal + financial

Court filings, insolvency, judgments.

PARTY UNDER REVIEW

**One record.
Ten independent
checks.**

CHECK 10 EXAMPLE

"12 years trading" + domain created 43
days ago

6

Web + digital identity

Does the digital history fit?

7

Consumer experience

Repeated independent patterns?

8

Transaction + payment

Who is the money going to?

9

4orm intelligence

Exact shared identifier?

10

Claim vs record

Does the story fit the dates?

SOURCE AUTHORITY

Not every source is allowed to mean the same thing.

The catalogue is public. The hierarchy and combination rules are the control system.

104 CATALOGUED SOURCES · AUTHORITY GATES

A · OFFICIAL RECORD**58**

May support a material finding on its own.

B · VERIFIED DATA**27**

Needs corroboration: two together, or one with Tier A.

4ORM · OWN CORPUS**8**

May establish a shared identifier - never a shared operator.

C · CONSUMER REPORTS**6**

Corroboration only. Never a finding by itself.

D · PUBLIC CHATTER**5**

Context only. Always labelled as chatter.

50 angry reviews**DO NOT EQUAL****an official finding**

Volume does not upgrade source authority.

THE COMBINATION ENGINE

**The sources are inputs.
The allowed combinations are the
product.**

OFFICIAL LICENCE MISMATCH

VERIFIED DIGITAL CONTRADICTION

OFFICIAL BENEFICIARY MISMATCH

REPEATED CONSUMER PATTERN

↓
MATERIAL FINDING MAY BE SUPPORTED

CONTROL LAYER

Two measures. Four standing orders. No blurred states.

IDENTITY CONFIDENCE

Are these records about the same party?

Same-name entities are never silently merged across jurisdictions.

EVIDENCE COVERAGE

How much of the applicable record did we reach?

Coverage is measured only against sources that could actually apply.

A SOURCE WITH NO RESULT CAN MEAN THREE DIFFERENT THINGS

EMPTY

Reached. Nothing relevant found.

NOT APPLICABLE

Could never hold a record here.

UNREACHED

Should have been checked, but could not be reached.

Only **UNREACHED** lowers evidence coverage.

THE FOUR STANDING ORDERS

1

EVIDENCE OR SILENCE

If it cannot be traced, do not say it.

2

ABSENCE IS NOT INNOCENCE

No result is not proof of safety.

3

GREEN IS NOT A GUARANTEE

Green describes completed checks - never endorsement.

4

ENTITY, NOT CHARACTER

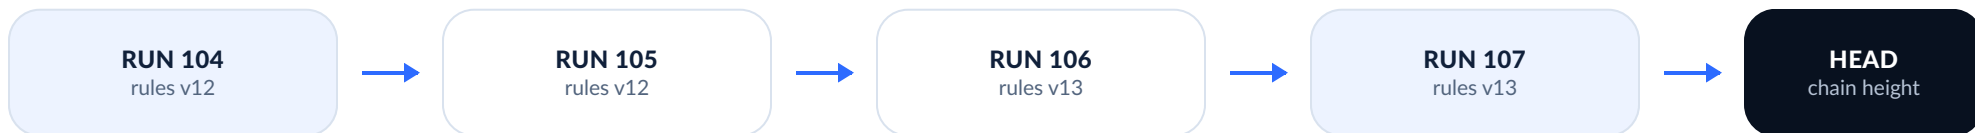

Describe records and identifiers. Never assume intent.

EVIDENCE LAYER

Prove the process without storing the subject.

Every run creates operational evidence. The chain proves how the engine behaved without turning the subject of the search into an operations log.

TAMPER-EVIDENT RUN CHAIN

RECORDED

Identifier type • province • declared purpose
run outcome • source behaviour • duration
rule version • privacy-preserving visitor-day

NEVER IN THE OPERATIONS CHAIN

The identifier
The party
The search result

RULE CHAIN

Every run names the rule version in force.
Every rule change needs a source or approved basis.

VISITOR-DAY

Salted • hashed • truncated • rotated daily.
Useful for abuse controls without a reusable identity.

WHY IT MATTERS

Old runs and rule changes cannot move silently.
Use "tamper-evident," not "immutable."

PUBLICATION GATE

Finding is not the same as publication.

1 QUALITY

Is the evidence strong enough?

2 IDENTITY

Are we sure it is the same party?

3 AUTHORITY

Can this source support this statement?

4 RIGHT OF REPLY

Does publication require contact and response time?

5 CURRENT

Does the finding still exist on the latest clean check?

PUBLIC OUTPUT LANGUAGE

- OFFICIAL FINDING LOCATED
- MATERIAL INCONSISTENCY
- CONSUMER-REPORTED PATTERN
- NO MATERIAL INCONSISTENCY FOUND
- UNRESOLVED / SOURCE UNAVAILABLE

BARRED AS VERDICTS

SAFE · TRUSTED · SCAM · FRAUDSTER · VERIFIED COMPANY

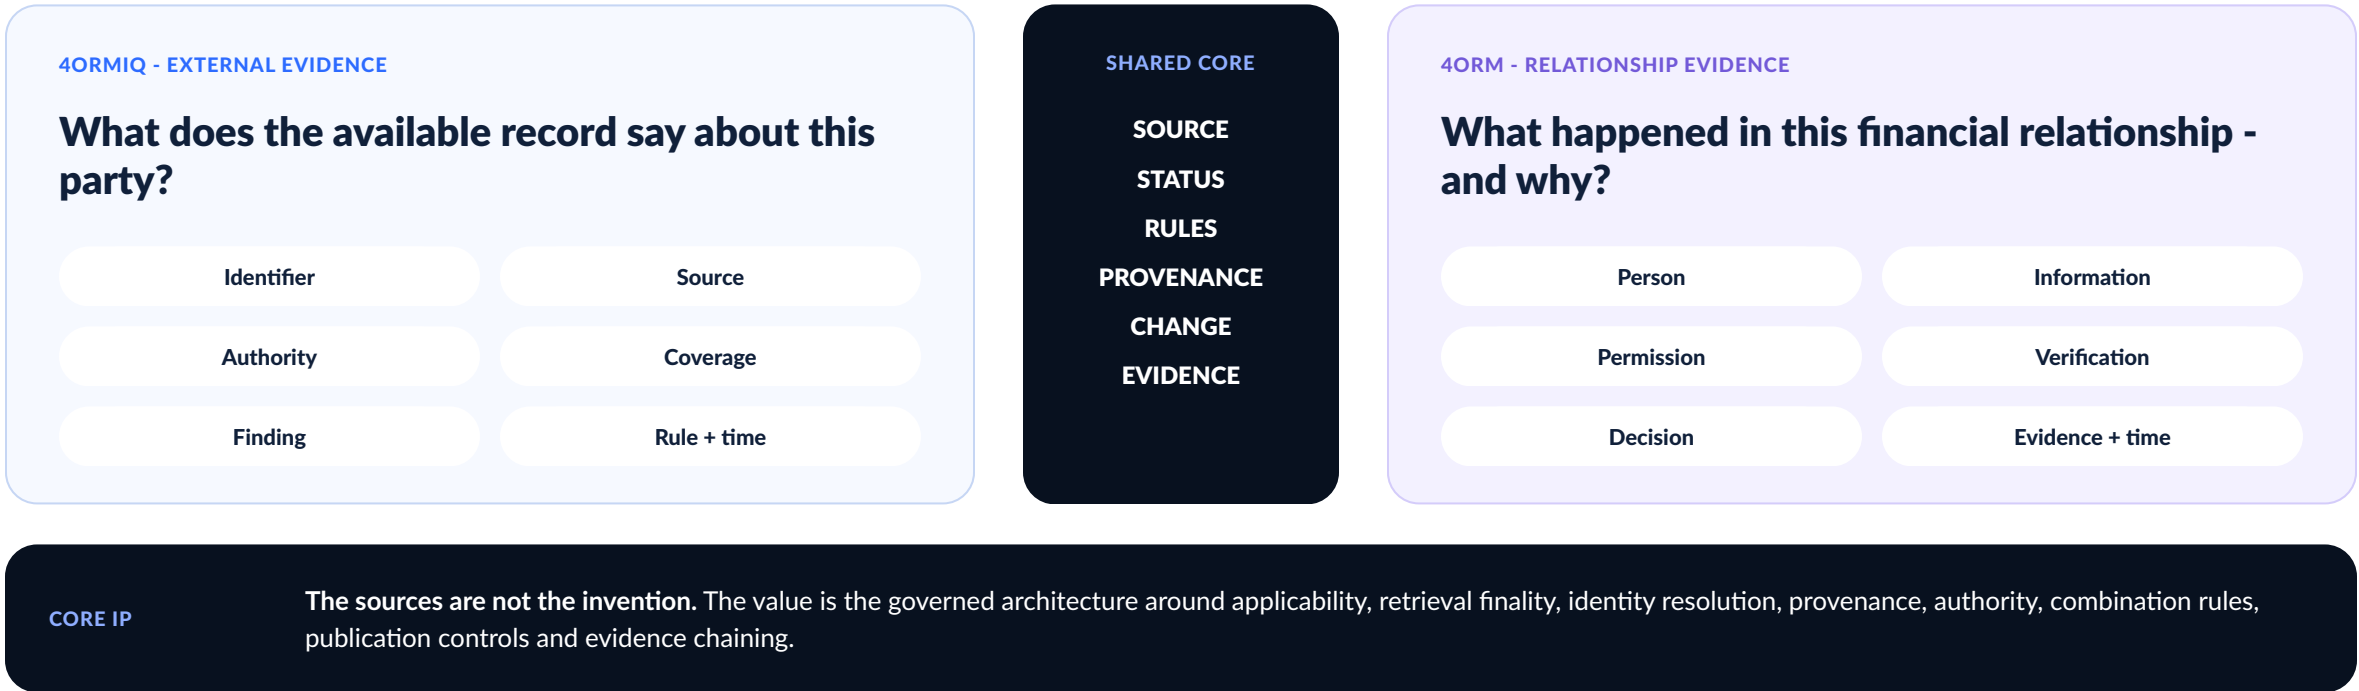

The record describes evidence, not character or intent.

Bring information into the light. Keep its meaning intact.**PUBLIC REGISTER RULE** No qualifying finding = no row. A finding that no longer survives the latest clean check comes off.

FROM 4ORMIQ TO 4ORM

Same evidence discipline. A bigger relationship.

4ormIQ proves the architecture on public evidence. 4orm extends the same control principles into the financial relationship itself.

IP WORKSTREAM Preserve rule versions, design decisions, invention dates and prior-art notes for later patent counsel review.
