4orm Business Plan

4orm is transaction integrity infrastructure for regulated financial decisions. It helps consumers understand what is happening, and gives businesses the evidence to prove what happened, why it happened, what information was used, what was agreed to, and whether the right process was followed.

100%

MORTGAGE FILES WITH NO

CHARGED TO A CONSUMER
IN ANY SCENARIO

One record

What each reader gets from it

The consumer

A readable account of why a recommendation fits their circumstances, and a copy they keep

The professional

Judgement supported rather than replaced, with the reason recorded while it is fresh

The regulated business

Evidence the work was done, produced from systems it already operates

The regulator

A record another qualified person can re-perform, in the same shape across markets

Legend. The company sells to the regulated business. The consumer is never charged, in any scenario in this plan, and no consumer data is sold in any of them.

The company is not proposing a new obligation. It is proposing infrastructure for one that already exists and is already being examined.

Canadian regulators have moved the test from whether a form was completed to whether the file can show why the decision suited the consumer. This document sets out the market that creates, the product, the commercial model, the financial plan, the risks, and what the company is asking readers to decide.

How to read section 7.

It carries revenue, the cost base, earnings, the solved capital requirement and a month-by-month cash bridge. 7.7 explains what changed since the last model; 7.8 prints the model's own checks, including the one that does not clear.

S E C T I O N 1 • E X E C U T I V E S U M M A R Y

The business at a glance

4orm Finance is building the record of what happened in a consequential consumer financial transaction: what the person wanted, what was known, what options existed, what was recommended and why, what was disclosed and acknowledged, and what followed. The consumer gains understanding. The regulated business gains evidence.

Item	Position at 1 September 2026
Legal entity	4orm Finance, Alberta incorporated, office in Calgary
Stage	Pre-revenue. First consumer product targeted within 30 days; first paid market under discovery
Product architecture	Three layers: 4ormIQ for consumer trust, Transaction Integrity as the commercial platform, and financial relationship infrastructure over the longer term
First paid market	Mortgage brokering, Ontario, then automotive finance as the architecture test
Buyer	The brokerage or dealer group. The professional carries the duty; the firm holds the budget
Revenue model	Professional subscription, evidence case usage, organization platform, embedded access, and safeguarding infrastructure for firms holding client money
Base case 2031 revenue	\$71.1 million, Canada only, on 40,000 paid professional seats, 400 organization accounts and 110 network partners
Capital	A solved seed of \$3.55 million in September 2027, on top of \$2.05 million of pre-seed equity completed by May 2027. The facility is optional and switched off

Legend. Source: 4orm Finance master pro forma, adoption-led build, 1 September 2026. A **professional seat** is one licensed person using the product. An **organization account** is a firm-level contract covering supervision and evidence across that firm.

Layer	What it produces	Revenue in the base case
4ormIQ, consumer	Trust, attention, usage evidence and distribution	Nil by design
Transaction Integrity, business	The paid record, its evidence output and firm-level supervision	90% of 2031 revenue
Regulated infrastructure	Safeguarding evidence for firms holding client money	10% of 2031 revenue

Legend. The consumer layer carries no revenue in the Low or Base case. It exists to create the conditions in which the business layer can be sold.

The commercial question this plan answers. Whether regulated Canadian firms will pay for infrastructure that produces a defensible account of a consumer transaction, and whether the same architecture carries into a second market at sufficient reuse to make the company infrastructure rather than a single vertical application.

S E C T I O N 1 • E X E C U T I V E S U M M A R Y

1.1 The opportunity, in four findings

Each finding below is drawn from a published regulator, association or company source. The full citation for each appears in Appendix C.

Finding	Evidence	Implication for 4orm Finance
The evidence gap is measured, not asserted	In its targeted 2024-25 supervisory work FSRA found no documented suitability assessment, meaning a written record showing why the product recommended fitted that borrower, in 100 per cent of the mortgage files reviewed, against 85 per cent the prior year. This does not establish that the recommendations were unsuitable; it establishes that the file could not demonstrate the assessment	The buyer's own regulator has already established the deficiency the product addresses
The deficiency is systemic, not individual	100 per cent of entities examined showed inadequate supervision of brokering activities	The purchase decision sits at firm level, which is where budgets and duties align
The direction is set beyond mortgage	The securities regulators reviewed 105 firms and found inadequate documentation of suitability determinations; RECO introduces mandatory annual financial filing on 1 October 2026 with monthly trust reconciliation planned for 2027	Multiple Canadian regulators are converging on evidence of the decision and the position
The cost of absent evidence is quantified elsewhere	The United Kingdom motor finance redress scheme was confirmed in March 2026 at £9.1 billion across 12.1 million agreements, resting on whether disclosure could be evidenced	A precedent exists for the economic consequence of unevidenced consumer transactions

Legend. FSRA is the Financial Services Regulatory Authority of Ontario, the provincial regulator for mortgage brokering, insurance and pensions. RECO is the Real Estate Council of Ontario. Its findings are targeted supervisory results on selected files and entities, not a claim about every Ontario mortgage file.

What is already required of the firm	To assess suitability, disclose material risks and conflicts, obtain informed consent, retain accurate records and supervise the people who act in its name
What is not currently produced	A single record that connects those obligations to the transaction they relate to, in a form that can be re-performed by a third party
What the company sells	That record, assembled from systems the firm already operates, with the consumer receiving a readable copy of the half that concerns them

The company is not proposing a new obligation. It is proposing infrastructure for an obligation that already exists and is already being examined.

That distinction governs the product boundaries in section 5.5 and the regulatory posture in section 9.

1.2 The financial summary

The model starts with year-end adoption and lets revenue fall out of it. Nothing is built backwards to a chosen 2031 figure, and every engine bills on the average of its opening and closing counts rather than on the closing one.

Canadian dollars	2027	2028	2029	2030	2031
Low	\$161,132	\$870,852	\$2,587,432	\$5,863,956	\$10,540,040
Base	\$937,888	\$6,106,188	\$18,728,038	\$40,748,550	\$71,065,963
Blue-sky	\$3,391,718	\$20,954,087	\$68,379,001	\$155,181,796	\$260,556,914

Legend. Source: master pro forma, Executive Summary tab. The scenarios differ in adoption, price, retention and which engines operate, not in sentiment.

Base case, position at 31 December 2031	Value	Against the counted base
Active consumers using 40rmIQ	3,000,000	7.2% of 41,417,056
Paid professional seats	40,000	18.4% of 217,585
Organization accounts	400	8.1% of 4,940
Network partners distributing the product	110	not applicable
Regulated infrastructure customers	110	14.8% of 745
EBITDA, 2031	\$36,866,541	52% margin

Legend. EBITDA is earnings before interest, tax, depreciation and amortization: what the business earns from operating, before financing and accounting charges. The base case turns EBITDA-positive in 2029 and funds itself from there.

Read the base case as one claim: 40,000 paid professionals by 2031, and 35,500 of them arriving through 110 networks rather than one at a time.

Every other figure depends on it. The Low case is what the business looks like if the product works and the networks do not.

The capital ask, in one place	Value	Note
Pre-seed equity, complete by May 2027	\$2,050,000	Two priced subscriptions and three SAFEs, milestone-gated across ten months
Solved seed, September 2027	\$3,550,000	Largest shortfall across the scale window, plus a three month cushion
Total equity through the seed	\$5,600,000	A planning output, not a financing recommendation

Legend. A \$500,000 venture debt facility is available at 8 per cent and is switched off: the plan reaches the round on equity alone. The seed is solved rather than chosen, at a \$30 million post-money. Cash stands at \$230,176 the month before it closes.

SECTION 2 · COMPANY

2.1 Purpose, and the principle that governs product decisions

40rm Finance exists to improve the quality of regulated financial relationships. The operating principle is that the consumer and the professional are on the same side of a poor transaction, and that one record can serve both.

Purpose	Protect the person, strengthen the relationship, and preserve a reliable record of what happened and why
Dual value principle	Help the consumer understand what is happening while giving the professional the evidence to demonstrate what happened and why. A feature that serves only one side is out of scope
Evidence principle	Original source records, provenance, timestamps, actors, events, consent and decision facts constitute the evidence. Summaries, classifications and explanations assist interpretation and are not themselves evidence
No extra work	Where information can be derived from an authorized system it is not requested again. Every release identifies the step added and the step removed
Boundaries	The company does not advise, does not decide, does not sign, does not hold or move client money, and does not monitor communications

Values applied to architecture rather than to language

Value	How it constrains the build
Protect the people	The first test of any feature is whether the person gains understanding, control and protection
Build it to last one hundred years	No trade of long-term trust for a short-term feature, sale or financing event
Own the outcome	Completing a task is not the same as resolving the underlying failure
Evidence is all that is needed for the truth	Preserve original evidence, provenance, versions and uncertainty
Clarity comes from conversation	Better financial decisions require real questions, not additional boxes

Legend. The full value set is maintained internally. The five above are the ones that appear as constraints in the product specification.

SECTION 2 · COMPANY

2.2 Three layers, one architecture

The company develops in three connected layers. Each has a distinct role, audience and commercial purpose. They share a common evidence architecture and transaction grammar, while individual products may operate in separate data, security and privacy domains.

Layer	Role	Commercial purpose	Status
4ormlQ	Consumer trust, attention and learning	Free entry product. Builds trust, usage evidence and distribution	In build
Transaction Integrity	A shared record across the parties to a transaction	The first paid business. Mortgage brokering is the first commercial market	In discovery
Financial relationship infrastructure	Identity, permissions and continuity across transactions	Network and infrastructure access over the longer term	Planned

Legend. 4ormlQ is not expected to carry the economics of the company. The commercial model is centred on the second layer, and the third is not funded independently until the second is proven.

What the record joins

Each element is captured once, dated, attributed to a named actor and retained with the transaction. Individual elements are already served by existing systems. The join between them is not.

Layer	Who uses it	What it must prove before the next layer is funded
4ormlQ	Consumers, without a fee	That people engage with something the company designs, and that engagement can be measured
Transaction Integrity	Regulated firms and their professionals	That firms pay, that adoption holds inside a signed firm, and that the architecture transfers
Financial relationship infrastructure	Consumers and institutions together	That permissions and identity can be carried between transactions within privacy and regulatory limits

Legend. Each layer is funded on the evidence produced by the one before it. The third is not resourced independently at any point in this plan.

Note. Terminology used throughout this document is defined in Appendix A. The terms transaction record, evidence case, decision integrity and financial position integrity carry specific meanings and are not used loosely.

SECTION 2 · COMPANY

2.3 What the product changes about suitability

Suitability is the test of whether a recommendation fitted the person who received it. Making that easier to establish is the outcome the product is designed to produce, and the boundary below is what keeps the claim honest.

4orm does not determine whether a recommendation is suitable.

It creates the context and the evidence that allow the consumer, the professional and the firm to understand and demonstrate why it was. The recommendation, the judgement and the signature stay with the licensed professional.

What each party contributes, and what results

Contributed by the consumer	Contributed by the professional	Connected by 4orm
Goals	Products considered	Facts connected to their original evidence
Circumstances	Alternatives	The decision connected to the facts relied upon
Preferences	Trade-offs	Changes connected to the decisions they affect
Concerns	Recommendation	The explanation connected back to the consumer
Questions	Reasoning	Professional judgement preserved, not replaced
Changes	Changes reconsidered	One record, readable by both sides

Legend. The result is a better-supported determination, not an automated one.

Who	What a better-supported determination gives them
Consumer	A clearer understanding of why this recommendation fits their circumstances
Professional	A better-informed conversation and structured support for professional judgement
Firm	A transaction that another qualified person can reconstruct and review

What this is, and what it is not

The product does	The product does not
Collect what the consumer wanted, in their own words, before options are shown	Decide what the consumer needs, or score them
Record the options considered and why one was recommended over the others	Choose the option, or rank products for the professional
Preserve what was known then, so the decision can be re-performed later	Assert that a recommendation was suitable

Legend. The right column would move the duty from the professional onto the software.

S E C T I O N 3 • M A R K E T

3.1 Addressable populations, counted rather than estimated

Two populations matter and they are not interchangeable. Professionals create records and consume seats. Organizations hold licences, carry supervisory duties and sign contracts. Every penetration figure in section 7 is expressed against one of them.

Reference population	Count	Unit	Source and date
Ontario mortgage brokerages	1,162	organizations	FSRA, 31 March 2026
Ontario mortgage brokers	2,759	people	FSRA, 31 March 2026
Ontario mortgage agents, level 1	7,127	people	FSRA, 31 March 2026
Ontario mortgage agents, level 2	4,699	people	FSRA, 31 March 2026
Canadian real estate professionals	160,000	people, floor	CREA, 2025, more than
Canadian property and casualty brokers	43,000	people, floor	IBAC, more than
Canadian franchised new light vehicle dealerships	3,778	organizations	CADA, 2025
Payment service providers holding end-user funds	745	organizations	Internal register, 2026
Counted professional base / counted organization base	217,585 / 4,940	people / organizations	Sum of the rows above

Legend. Source: master pro forma, Market Sanity tab. These populations are used as denominators for penetration. No revenue figure in this plan is derived by multiplying a population by a price.

Population type	What it determines	How it is used in section 7
Professionals	Seat revenue and the volume of records created	Penetration expressed against 217,585 counted individuals
Organizations	Platform contracts and supervisory revenue	Penetration expressed against 4,940 counted firms
Transactions	Usage revenue, independent of how many firms are signed	Multiplied by an adoption rate, never by a population

Legend. Mixing these three is the most common error in a market estimate. They are kept separate throughout the financial plan.

Note. The Ontario mortgage figures are used for the beachhead. National figures are used for the expansion sequence in section 6.7 and are not counted in the base case before the year in which the relevant market opens.

S O U R C E S FSRA sector counts • CREA Annual Report 2025 • IBAC • CADA

S E C T I O N 3 • M A R K E T

3.2 Transaction volume, and why it matters more than population

The commercial model includes a fee tied to completed transactions. Transaction volume therefore sets the ceiling on usage revenue independently of how many firms are signed.

Transaction population	Annual volume	Period	Source
Mortgages brokered in Ontario	270,000+	2024	FSRA, worth more than \$158 billion
Residential sales through the Multiple Listing Service, Canada	470,314	2025	CREA
New light vehicles sold, Canada	1,897,055	2025	CADA
Individual life policies, Canada	not published	not applicable	No national count exists

Legend. Insurance record volume is therefore modelled from licensed users inside contracted agencies rather than from an invented transaction count.

Demand drivers

Driver	Observable evidence
Consumer control of financial data	The federal Consumer-Driven Banking Framework provides for consent management, withdrawal of access and deletion following withdrawal where the law permits
Regulatory focus moving from process to outcome	Supervisory findings addressing rationale and re-performance rather than form completion
Financial oversight becoming continuous	RECO annual financial filing from 1 October 2026, monthly trust reconciliation planned for 2027
Fraud moving earlier in the transaction	Reported fraud losses above \$704 million in 2025, with an estimated 5 to 10 per cent of incidents reported
Accountability moving toward platforms and institutions	Redress and liability outcomes attaching to firms rather than to individuals

Legend. Each driver is a condition the company did not create and cannot influence. They are listed because they determine whether the purchase is timely, not whether it is possible.

SOURCES [CREA 2025 sales](#) • [CADA data report](#) • [Consumer-Driven Banking Framework](#) • [Finance Canada anti-fraud paper](#)

S E C T I O N 3 · M A R K E T

3.3 Measured deficiencies in the beachhead market

FSRA publishes the results of its targeted supervisory reviews of mortgage brokerages. The table below is the two most recent review periods, presented as the regulator presents them.

Deficiency identified	2023-24	2024-25	Basis
No documented suitability assessment, including exit strategy and rationale	85%	100%	By file
Missing or inadequate disclosure of material risks	48%	73%	By file
Missing or inadequate disclosure of relationships or conflicts of interest	35%	65%	By file
Inadequate supervision of brokering activities	93%	100%	By entity

Legend. Source: FSRA Mortgage Brokering Sector Supervision Plan 2025-26. These are targeted reviews of selected files and entities. FSRA does not publish the number of files reviewed in the 2024-25 period, and the findings are not representative of every Ontario mortgage file.

A recommendation can be right and still be impossible to prove.

The recurring finding is not that the advice was shown to be wrong. It is that the record could not establish whether it was right. That distinction is the market.

The same direction in adjacent regulated markets

Investments	The Canadian Securities Administrators and the Canadian Investment Regulatory Organization reviewed 105 firms under the Client Focused Reforms and identified inadequate documentation of suitability determinations, including firms that recorded only that an investment was suitable without showing the basis
Life and health insurance	FSRA's most recent agent supervision work identified missing contemporaneous notes as the first of its five most common deficiencies, alongside missing product range disclosure and absent needs analysis
Automotive finance	OMVIC advises consumers that dealers may submit credit applications to multiple lenders, may receive different offers and compensation, and may not present every available option
Real estate	RECO's published regulatory actions between March and August 2026 are dominated by disclosure, consent, record-keeping and trust account failures

Note. The pattern across four regulators is consistent: the finding is rarely that the advice was wrong. It is that the file cannot establish whether the advice was right, which is a different deficiency with the same consequence for the firm.

S E C T I O N 3 · M A R K E T

3.4 The same requirement, under different names, across markets

Each regulated market uses its own vocabulary, and only some of them call the test suitability. The underlying requirement does not change: connect the person's circumstances to the decision that was made, and preserve the evidence that supports it. The table below states the requirement in each market's own terms.

Market	What has to be established
Mortgage	Why this mortgage suited this borrower
Investments	Why this investment suited the client's circumstances, objectives, risk tolerance and portfolio
Insurance	Why this product met the person's needs, and why it was recommended
Auto finance	What financing options existed, what was presented, what changed, and why this option was selected
Real estate	What was disclosed, authorized and understood through the transaction
Client money	Not suitability. Whether the required financial controls occurred, and whether money remained where it belonged

Legend. Client money is listed separately on purpose. Financial position integrity is a controls question rather than an advice question, and the plan does not describe it as suitability.

The published finding behind each row

Mortgage	FSRA's targeted 2024-25 review found no documented suitability assessment in 100 per cent of the files reviewed, and inadequate supervision of brokering activities in 100 per cent of the entities examined
Investments	The Canadian Securities Administrators and CIRO reviewed 105 firms and identified inadequate documentation of suitability determinations, including files recording only that an investment was suitable without documenting the basis
Insurance	FSRA identified missing contemporaneous notes, product range disclosure and needs analysis deficiencies in its agent supervision work
Auto finance	OMVIC has published guidance on multiple lender submissions, differing offers and undisclosed compensation, including situations in which not every available option is presented to the consumer

The rows above are supervisory findings on selected files and entities. They establish that the record frequently cannot demonstrate the basis for a decision. They do not establish that the decisions themselves were wrong, and this plan does not claim they do.

S O U R C E S [FSRA supervision plan 2025-26](#) · [CSA and CIRO staff notice](#) · [OMVIC](#)

S E C T I O N 3 · M A R K E T

3.5 The cost of the current state, as recorded by the regulators

The economic consequence of an unprovable file is observable in published Ontario figures for a single year. Penalties are the visible component and the smaller one.

Chart. Published Ontario figures for a single year, drawn to one scale from zero. Sources: RECO Annual Report 2025, OMVIC 2025 Annual Report, FSRA Enforcement Annual Report 2024-25.

Cost category	Observed measure	Who bears it
Regulatory penalty	\$1.2 million of FSRA monetary penalties across 100 enforcement actions in FY2024-25, with 25 licences revoked or refused; \$1.9 million in fines at OMVIC	The firm, and in several categories the individual personally
Professional indemnity	\$15.7 million of estimated errors and omissions payments in Ontario real estate in 2025	The insurer, and the sector through premium
Complaint handling	2,878 complaints opened at RECO in 2025, an increase of 88 per cent over 2024	The firm, in hours and in management attention
Reconstruction	Not published. Observed in practice as days of work per disputed file	The firm, at the moment it is least able to absorb it

Legend. The reconstruction line is a management estimate based on practitioner accounts in Appendix E and is labelled as such. **Errors and omissions insurance** covers claims that a professional gave wrong advice or made a mistake; the payments below are what that insurance actually paid out in one province in one year.

How this cost translates into a purchase.

A firm does not buy evidence infrastructure to avoid a penalty it does not expect. It buys it because complaint handling, professional indemnity renewal and supervisory examination are recurring operating events with an unpredictable cost, and because the principal broker carries several of those exposures personally.

S O U R C E S RECO Annual Report 2025 · OMVIC 2025 Annual Report · FSRA enforcement report

SECTION 3 • MARKET

3.6 International precedent: what a comparable duty produced

The United Kingdom introduced a consumer outcomes duty in 2023. Two consequences followed that are material to this plan: a supplier category formed, and one industry established the price of unevidenced disclosure.

Measure	Figure	Relevance to the Canadian thesis
Total cost of the redress scheme to firms	£9.1 billion	Establishes the economic scale of unevidenced consumer disclosure
Agreements in scope	12.1 million	The exposure is per transaction, which is how the product is priced
Average redress per agreement	£829	A per-transaction consequence comparable to a per-transaction fee

Legend. Source: FCA Policy Statement PS26/3, 29 March 2026. The regulator's consultation stated that the absence of evidence of disclosure is enough to presume that it is highly likely no disclosure was made.

What formed in response to the duty	Relevance
A supplier category selling outcome and suitability evidence	Demonstrates a willingness to pay where a regulator requires evidence
Evidence obligations attaching to the firm rather than the individual	Supports the firm-level purchase assumed in section 6.1
Redress calculated per agreement rather than per firm	Supports a per-transaction pricing unit

Legend. No part of the Canadian forecast assumes a Consumer Duty equivalent is introduced here.

Note. Canada has no equivalent duty and this plan does not assume one arrives. The precedent is used to establish that firms pay for outcome evidence where a regulator requires it, and to identify the supplier categories that formed in response.

SOURCES FCA PS22/9, Consumer Duty • FCA PS26/3, redress scheme • FCA CP25/27

S E C T I O N 4 • C O M P E T I T I O N

4.1 What regulated firms buy today, and the step none of it reaches

Every firm in these markets already spends on software and advice. Four steps run through a consequential consumer transaction. The market serves the first three well and the fourth is where the categories stop.

Step in the transaction	How well it is served today
01 Establish who the client is and what they want	Well served. Every vertical has a customer system
02 Move the transaction through to completion	Well served. Origination, forms, contracting, funding
03 File and retain the documents	Well served. Document stores, electronic signature, retention tools
04 Demonstrate why the decision suited that consumer	Where every category below stops
Category the firm already pays for	Where it stops
Customer and origination systems	They record what was submitted, not the reasoning that made it suitable
Forms and electronic signature	A signed form evidences that a form was signed, not what was explained
Document storage and shared drives	They retain files without an account of the decision or its sequence
Compliance consultants and outsourced file review	They arrive after the transaction, bill by the hour, and cannot reconstruct what was not recorded
Training and continuing education	They teach the obligation and produce no evidence that it was met
Internal email and personal notes	No cost, the most common alternative, and the least defensible under examination

Legend. The fourth step is the one tested on examination, argued in a professional indemnity claim, and disputed by a consumer. It is also the only one for which no established category exists in Canada.

Note. This analysis frames the competitive question correctly: the realistic alternative to 4orm Finance is not a rival product. It is the status quo, at no incremental cost, with an unquantified contingent liability attached.

SECTION 4 · COMPETITION

4.2 Direct, adjacent and substitute competition

Competitors are assessed on whether they remove the need for the product within three years, not on feature overlap. Two entrants on the money side have narrowed the gap since the company's earlier assessment, and the plan records that plainly.

Party	Category	Position against 4orm Finance	Risk
Vertical customer, origination and dealer systems	Incumbent workflow	Own distribution and data. Could add an explanation screen or an audit narrative	High
AutoRek	Safeguarding automation	Publishes end-to-end safeguarding automation and a Canadian case study. Business facing only	High, money side
Guardexia	Safeguarding platform	Publishes a standard platform at £2,500 per month for one entity	Medium, money side
Kani Payments	Safeguarding reporting	Publishes a safeguarding calculation and reporting product without public pricing	Medium, money side
Compliance consultants and file review firms	Services	Address the same failure manually and at higher cost. Also a distribution channel	Medium
Aveni, Recordsure, MorganAsh, Comentis	United Kingdom evidence vendors	Prove firms pay for outcome evidence. No Canadian entity or rule set, no consumer-facing half	Low, near term
Status quo: email, notes and shared drives	Substitute	Free, entrenched, and the realistic alternative in most firms	The primary competitor

Legend. A correction to the company's earlier position: the assessment that no vendor sold safeguarding evidence in Canada no longer holds. Safeguarding is treated in this plan as a defensible product wedge rather than an uncontested market.

Where the defensible position sits.

Features can be copied. The position the company intends to defend is the accumulated transaction history inside a firm, the integration into the workflow that produces it, the switching cost that creates, and the regulatory knowledge required to keep an obligation library current across four regulators. None of those is available to a new entrant on the day it ships a comparable feature.

S E C T I O N 4 • C O M P E T I T I O N

4.3 The suppliers a comparable duty produced, and what they did not build

The United Kingdom vendor set is the closest available evidence of demand for this category. It also defines the areas the company has decided not to enter.

Company	What it sells	Scale on the public record
Aveni, Edinburgh	Evidence and compliance automation over recorded customer interactions	£11 million raised in July 2024 and £12 million in June 2026. Nationwide, Lloyds, Aviva and Schroders named as customers
Recordsure, London	Conversation assessment and file review for suitability and outcomes	More than 500 million interactions analysed over thirteen years
MorganAsh, United Kingdom	Consumer-supplied assessment producing a vulnerability rating	Integrated with Intelliflo and Iress. Canada Life, Royal London and Zurich named
Comentis, United Kingdom	Vulnerability assessment and outcome surveys by widget or interface	Founded 2018. A £200,000 pre-launch round is the only disclosed funding

Legend. Figures are each company's own published claims. All four sell to the regulated firm only. None provides the consumer with a copy of the record, and none operates in Canada.

Areas the company has decided not to enter, and why

Conversation monitoring and analysis	Occupied by funded competitors with a decade of recorded interaction data. Entering would mean competing on their evidence base
Vulnerability scoring	Occupied, narrow, and sold as a rating rather than a record
Autonomous regulated advice	A licensing exposure without a defensible position, and the direction regulators are least comfortable with
Replacement of vertical workflow systems	A multi-year contest against entrenched incumbents in markets that already have adequate software
Referral or lead generation revenue	Excluded until legal and conflict analysis supports it, because it would compromise the consumer trust the first layer depends on

SECTION 5 · PRODUCT

5.1 The transaction record: what it holds and what joins it

The product is a structured record of a single transaction, assembled from systems the firm already operates. Each object carries its source, time, version, provenance, permissions and its relationships to the rest of the transaction.

1

Objects the record holds

■ Person.

The consumer or client in the transaction

■ Professional.

Whoever is accountable for the advice or action

■ Goal.

What the person is seeking to accomplish

■ Fact.

Material information relied upon

■ Evidence.

The original source behind a fact, event or action

2

Relationships between them

■ Option.

A product, lender or route considered

■ Decision.

What was selected, recommended or approved

■ Rationale.

The stated reason for the decision

■ Change.

What became different, and what depended on it

■ Outcome.

What happened after the decision

Five properties the record must preserve

Truth	What was known at the time, and what evidence supported it
Decision	What options existed, what was selected, and the stated reason
Change	What became different, and which earlier decisions relied on the previous position
Understanding	What was explained, asked and acknowledged. The record does not assert what a person internally understood, because that is not evidence
Consequence	What followed the decision, and how it compares with what was expected

Note. Provenance means the traceable origin of a piece of information: which system or person it came from, when, and in which version. It is the property that allows a transaction to be reconstructed rather than recalled.

S E C T I O N 5 · P R O D U C T

5.2 Evidence classification, and the language used to describe it

The product separates original evidence from interpretation and makes uncertainty visible. It never describes information as more established than its source supports.

Evidence class	Example	How the product describes it
Authoritative source	Regulator, registry, originating institution, official filing	Verified against an authoritative source
Originating system record	Bank feed, lender response, system event, signed document	Source-linked system evidence
Direct communication	Email, message, call record, meeting note	Communication evidence with provenance
Professional attestation	Judgement, rationale, approval	Named human attestation
Consumer statement	Goal, concern, self-reported fact	Consumer-provided information
Public or third-party information	News, review, complaint, public record	Context, not automatically an authoritative fact
Unknown or disputed	Conflicting or absent evidence	Unknown, disputed or not verified

Legend. Registration, licensing, authorization, regulation, approval, warnings, complaints and allegations carry different meanings and are never used interchangeably in the product or in company material.

1 The five statuses a fact can carry

- **Verified.** Supported by an authoritative or originating source
- **Supported.** Evidence exists but is not authoritative
- **Self-reported.** Stated by a person, not independently established
- **Disputed.** Two or more sources materially conflict
- **Unknown.** The evidence required is absent

2 Corrections create versions

A correction is recorded as a new version and the original is retained, so the record can still show what was known at the relevant time. A business may add context and a consumer may challenge an inaccuracy. Neither party can silently amend what occurred.

S E C T I O N 5 • P R O D U C T

5.3 Operating model: the product removes work rather than adding it

This is a design constraint rather than a marketing position. Where information can be derived from an authorized system, the professional is not asked to enter it again, and each release identifies the step added and the step removed.

Connection method	Where it is used
Native interface or event notification	Systems that expose structured data and events
Secure lightweight plugin	Older or closed systems where the user continues to work normally
Bank or account feed	Financial position and safeguarding controls
Email and document connection	Communications, disclosures and evidence created in the ordinary course
Scheduled file transfer or export	The practical fallback for spreadsheet and file-based workflows
Approved browser capture	Only where a closed system offers no better path

Legend. The sequence is: connect once, observe, understand change, surface what matters, preserve the evidence.

Confirmation rather than re-entry

Pattern avoided	Pattern used
Ask the professional to enter the client's income again	Income \$142,000. Source: application and supporting documents. Confirm or correct
Ask the professional to list every lender considered	Applications were recorded with three named lenders. Confirm the options considered
Ask the professional to write a long rationale	The product assembles the context. The professional confirms, corrects or adds judgement

Legend. Attention is directed to exceptions: income that changed after a recommendation, an application submitted outside recorded consent, trust liabilities that no longer match funds held, or circumstances that moved after suitability was assessed. Routine activity is not surfaced.

S E C T I O N 5 · P R O D U C T

5.4 Consumer control, identity and the planned wallet

Consumers provide the same sensitive information at the start of every regulated financial relationship. The planned wallet allows a person to carry a reusable, encrypted identity and verification relationship instead of repeating it.

The person controls	The business receives
Identity and verified know your customer relationship	Only what the permitted transaction and its obligations require
Permissions and any future sharing	A record of what was authorized, for what purpose and for how long
Visibility into who has accessed what	The information and evidence required to operate and to meet legal duties
Correction of inaccurate information	Updated information with version history where required

Legend. Know your customer refers to the identity and background checks a regulated firm must perform before acting for a client. The wallet is a planned capability and will be implemented only where privacy, security, identity and regulatory requirements are satisfied. No revenue in section 7 depends on it.

Retention and deletion, stated in advance

Business records	The firm retains what it is legally or regulatorily required to retain
Shared transaction history	The company preserves the record required to support the transaction, the evidence and the applicable obligations
End of the retention period	Eligible parties can be notified that information may be deleted where the law permits
Limits on deletion	Legal holds, complaints, investigations, litigation and regulatory duties can prevent deletion. The product states this rather than implying otherwise

Note. The shared record cannot belong exclusively to the party paying for it. A business may add context and a consumer may challenge an inaccuracy. Neither can silently amend what occurred, and that constraint is architectural rather than contractual.

S O U R C E S [Consumer-Driven Banking Framework](#) · [Bank of Canada, consumer-driven banking](#)

S E C T I O N 5 · P R O D U C T

5.5 Two applications of one architecture, and the boundaries of both

The same infrastructure answers a question about a decision and a question about money. The second is an application of the company's architecture, not a separate definition of it.

Decision integrity asks	Financial position integrity asks
What did the person need?	What does the business owe?
What facts were known?	What does the business hold?
What options existed?	Where is the money?
What was recommended, and why?	What control applied, and did it occur?
What changed?	Was there a discrepancy?
What was explained or acknowledged?	How was the exception resolved?
What proves the decision?	What proves the position?

Legend. Decision integrity opens in mortgage brokering, then automotive finance, investments and insurance. Financial position integrity opens in real estate trust accounts, then payment service providers holding end-user funds.

What the product does not do

It does not advise	The recommendation belongs to the professional. The record holds the reason given, not a reason generated by software
It does not replace the workflow	Customer, origination and dealer systems retain their function. The product reads from them and writes the record
It does not monitor communications	Messages are contributed by the consumer or the professional. Extracted facts remain linked to their source and are reviewed before use
It does not delete on request where the law requires retention	Consumer control operates inside the firm's legal duty, and the limit is disclosed
It does not certify compliance	The company does not sign filings, does not hold or move client money, and does not determine whether a firm is compliant

S E C T I O N 5 · P R O D U C T

5.6 The architecture, in three tiers

The architecture is described here as a business design rather than an implementation. It states what the solution must be able to do. How each tier is realised is a decision for the chief technology officer and the build partner, and is tested by demonstration rather than by agreement with this description.

Read it downward. What a person sees is the top tier. What the company owns is the middle one. What it reads from is the bottom. **A common architecture does not require common physical storage.**

Sensitive domains remain separated.

4ormIQ is designed to be capable of operating independently of the institutional product. The two share an evidence architecture and a transaction grammar. They do not automatically share a physical database, and a consumer record is not moved into an institutional product because the two were built on the same model.

What the common model buys the company

Property	What it means in practice
One grammar, many markets	A new regulated market is onboarded as configuration against the same model rather than as a new application
State, rather than data alone	The record holds the state of a transaction at each point, so an earlier state can be reconstructed rather than derived by report
Separable domains	Consumer and institutional data can sit in different security and privacy domains without a second architecture
Demonstrable behaviour	Each property above is written as an architectural invariant the build partner must demonstrate, not assert

Legend. These properties are the reason the architecture is specified before the build partner is engaged. A solution that satisfies the narrative but not the behaviour is a fail.

Note. The design authority for this architecture sits with the company. The build partner writes the software against it and is validated against a demonstration script rather than a design review.

S E C T I O N 5 · P R O D U C T

5.7 Five principles, and what each one prevents

Five principles govern the architecture. Each exists because of a specific failure, and each is written so that a breach is visible rather than arguable. They constrain what can be built, which is the point of them.

Principle	What it means	The failure it prevents
Separation of control and execution	Regulatory oversight stays independent of platform operation	A supplier grading its own homework, and a regulator being asked to trust it
Modularity by domain	Each domain is a service with clear ownership and defined boundaries	A second market that cannot be added without rebuilding the first
Non-bypassable controls	Critical controls are enforced inside the workflow, so no step can be skipped	A control that exists in the policy manual and not in the file
Provability and traceability	Every action is immutable, time-stamped and auditable end to end	A record that is contested and cannot be defended
Privacy and data sovereignty	The consumer controls their data, shared only on explicit permission, held in Canada	A consumer relationship built on data the person did not agree to share

Legend. Immutable means a record cannot be altered after the fact. A correction is written as a new version, and the original survives.

Why these are stated before the build partner is engaged.

Each principle becomes an architectural invariant in the validation pack: something the partner must demonstrate in working software rather than agree with in a design review. A solution that satisfies the narrative and not the behaviour is a fail, and the company would rather find that in a workshop than in an examination.

How each principle is demonstrated rather than asserted

Principle	The demonstration asked for
Separation of control and execution	Show an oversight view a firm cannot alter, and a platform action it cannot hide
Modularity by domain	Configure a second market against the same model, in front of us, without a code change to the first
Non-bypassable controls	Attempt to complete a transaction with a required step skipped, and show what happens
Provability and traceability	Produce a state from a live file, then the same state as it stood a month earlier
Privacy and data sovereignty	Withdraw a consent and show what stops being visible, and what legally cannot

Legend. Workshop scenarios, not a checklist. Each has a pass condition written before the demonstration, so the outcome cannot be reinterpreted afterwards. A partner who cannot pass them is the wrong partner, which is cheaper to learn in a room than in production.

S E C T I O N 5 · P R O D U C T

5.8 What every event records, and the two clocks it carries

An event is the smallest unit of the record: one thing that happened. Eight fields are captured every time, without exception. Six of them are ordinary. The two that matter most are the reason and the source, because those are the two an examiner asks for and the two a conventional system does not keep.

Who The named actor, not a login	What The action taken, in the same terms	On what The object affected: a fact, a decision	When The timestamp, on both clocks
Why The business reason. Usually left empty	Evidence source Where it came from: system or person	Rule The requirement, as it stood then	Resulting state What became true, so it can be rebuilt

The two clocks, and why they cannot be one

Two clocks, kept apart, are what allow a decision to be judged on what was known at the time.

Keeping the two apart is what lets the record answer two separate questions: was the recommendation reasonable on what was known at the time, and once the circumstances changed, was suitability reconsidered. A system that stores only the current value can answer neither.

What every event carries, whatever the market

Immutable and ordered	An event is written once and takes its place in sequence. Reordering is not available to anyone, including the company
Time-stamped on both clocks	So a fact can be true from January and known only in March, and the record shows both
Traceable and verifiable	Every event points back to the source it came from, and the source can be produced
Tamper-evident	An alteration is detectable. This is the property that turns a stored file into evidence somebody will accept

Note. This is a description of what the record must hold, not of how it is stored. The implementation is a decision for the chief technology officer and the build partner.

S E C T I O N 5 · P R O D U C T

5.9 What was known then, and what changed after

A suitability question is answered twice: once at the moment of the recommendation, and again after the circumstances move. A system that stores only the final state can answer neither. Preserving the history is what allows both questions to be answered separately, and it is central to the product.

What the record preserves	Why the distinction matters
What was known at the time	The recommendation is tested against the facts available then, not against hindsight
What actually changed	A change of circumstance is a new version, not an overwrite
When the change occurred	Separates the event from the moment it became known
When the business learned of it	Establishes when a duty to reconsider was triggered
Which decision relied on the earlier information	Connects the change to the decisions it affects
What happened next	Shows whether suitability was reconsidered, and on what basis

A worked example

At the time of the recommendation	Verified income of \$120,000 . The recommendation is made and recorded with the facts relied upon and the reason for the choice
Later in the relationship	New evidence arrives. Income is \$95,000 . The record carries a new version, dated, with its source, and the original survives intact
The two questions this now answers	First, was the original recommendation reasonable on what was known at the time. Second, once the circumstances changed, was suitability reconsidered, when, and by whom

A conventional record answers neither question well. Overwriting the income figure destroys the basis for the first, and storing only the current state gives no evidence for the second. Historical reconstruction is therefore an architectural requirement rather than a reporting feature, and it is one of the invariants the build partner is required to demonstrate rather than assert.

S E C T I O N 5 · P R O D U C T

5.10 Where the record lives, and how 4ormIQ sits beside it

The record is held in three places that do different jobs. Separating them is what makes an earlier state reconstructable rather than merely remembered.

Store	What it holds	Why it is separate
Evidence store	Originals and source copies, encrypted and access controlled	The source document has to survive independently of anything derived from it
Event history	A time-ordered record of every event, which cannot be altered or deleted	This is the layer that makes the record defensible rather than assertable
Current state	Real-time views and workflow, always rebuilt from the history	A view can be wrong and corrected. History cannot be edited to make it right

Legend. Current state is derived, not authored. That is the property that stops a convenient correction from becoming the official version of events without leaving a trace.

4ormIQ and the platform, side by side

The boundary	What it guarantees
4ormIQ does not reach institutional data	A consumer product cannot become a back door into a firm's file
The platform does not read 4ormIQ searches	Unless a relationship is created and the consumer permits it
Both follow the same event and evidence rules	So they interoperate later without a second architecture
The consumer decides what is shared, and when	Consent is the connector, not a data-sharing agreement between systems

Legend. This is the separation the plan describes in 2.2 and 5.6, drawn. Sensitive domains stay apart while the grammar stays common.

S E C T I O N 6 · C O M M E R C I A L

6.1 Selection of the beachhead market

Mortgage brokering in Ontario was selected against six criteria. The table records how each candidate market scored, so that the choice can be re-examined rather than assumed.

Criterion	Mortgage	Automotive	Real estate	Insurance
Consumer consequence of a poor decision	High	High	High	Medium
Professional judgement present in the transaction	High	Medium	High	High
Published regulatory finding on evidence	High	Medium	Medium	Medium
Repeatable transaction volume	High	High	High	Low
Identifiable buyer with budget and duty	High	Medium	High	Medium
Difficulty of incumbent displacement	Medium	High	Medium	Medium

Legend. Assessment by management against public evidence. Mortgage is selected on the strength of the published regulatory finding and the concentration of duty in the principal broker.

The buyer, and the people around the buyer

Role	Position in the decision
Principal broker or broker of record	Economic buyer and duty holder. Signs without a committee in most firms
Compliance officer or office manager	Day-to-day operator and the first evaluator of workload
Agents and brokers	Users. Adoption risk sits here rather than in the purchase
Errors and omissions insurer	Indirect beneficiary. A potential channel rather than a buyer
Franchisor or network	Aggregated purchase path, and the route to multi-firm deployment

Legend. A go-to-market plan that names only the user is incomplete. The economic buyer, the operator and the adopter are three different people in this market.

What the buyer is currently spending on the same failure.

Outsourced file review, compliance consulting, professional indemnity premium, and internal hours spent reconstructing files during a complaint or an examination. The purchase is therefore a substitution against existing spend rather than a request for a new budget line, which materially shortens the approval path in a firm of this size.

SECTION 6 · COMMERCIAL

6.2 Sales motion, pilot definition and channel development

Founder-led direct discovery and partnership development run in parallel. Direct customers establish product evidence. Potential channel, network, integration and institutional partners are explored during discovery, so that validated distribution paths are ready when the product is proven. No partnership is counted as revenue until it is commercially documented.

Stage	What happens	Exit criterion
Trigger	A published regulatory finding, an examination, a complaint, or a renewal of professional indemnity cover	The firm accepts a discovery conversation
Discovery	Structured interview on file assembly, supervision, complaints and reconstruction effort	Two quantified pain points and a named budget owner
Demonstration	One of the firm's own completed files, rebuilt as a transaction record with gaps visible	The firm agrees the gaps are material
Paid pilot	Defined scope, data access, success measure, decision date and conversion path	A signed pilot with a fee attached
Conversion	Platform subscription plus seats, with usage priced per completed transaction	First invoice paid
Expansion	Additional offices, supervision reporting, second transaction type	Net revenue retention above 100 per cent

Legend. A pilot without a buyer, a scope, a success measure and a decision date is research rather than commercial progress, and is not counted as pipeline.

What a paid pilot must contain before it starts

Element	Why it is mandatory
A named budget owner	Without one, the pilot ends when the enthusiast leaves or gets busy
A defined scope, in files rather than in weeks	A time-boxed pilot with no volume target produces an opinion, not a result
Agreed data access	Access negotiated mid-pilot is where most of them stall
A written success measure	Set before the work starts, so the outcome cannot be reinterpreted afterwards
A decision date and a conversion price	The pilot exists to reach a decision, and both answers are useful
A fee	A free pilot measures curiosity. A paid one measures intent

Legend. A pilot missing any of the six is research. Research is valuable, and it is recorded as discovery rather than as pipeline. Partnership development runs alongside this motion on its own register, set out in 6.4.

SOURCES Century 21 Canada · eXp Canada transition

SECTION 6 • COMMERCIAL

6.3 These markets are already organised into networks

4orm intends to build a small number of direct customers first, but the long-term commercial model is not based solely on acquiring individual professionals or firms one at a time. The markets the company is entering are already organised into networks, and those networks are where scale is available.

Partner type	Why it matters	What to explore
Mortgage networks and broker groups	One relationship can reach hundreds or thousands of professionals	Network licensing, preferred platform, shared supervision
Banks and credit unions	Existing consumer relationships, lending infrastructure and trust	Consumer experience, data connections, embedded transaction integrity
Franchisors and national firms	One agreement can distribute across many offices	Enterprise and network deployment
Dealer groups and automotive networks	Large transaction volume under one commercial relationship	Transaction-based deployment
Insurance organisations and MGAs	Central supervision with distributed professionals	Suitability and evidence infrastructure
Professional associations	Efficient access to concentrated professional populations	Education, pilots, member access
Errors and omissions insurers	They benefit directly from better records and lower reconstruction risk	Risk reduction programmes and distribution
Existing financial platforms	They already own the workflow and the distribution	Embedded 4orm infrastructure
Compliance, accounting and legal firms	Trusted advisers to the buyer	Referral, implementation and assurance ecosystem
Data and connectivity providers	They reduce the integration burden	Connector partnerships

Legend. MGA means managing general agent, an organisation that distributes insurance through licensed agents and carries supervisory duties over them.

The principle.

Prove the product directly, then scale through organisations that already aggregate the people and the transactions the company needs to reach. Partnership exploration begins now, not after full product-market fit, because the conversations that establish a distribution path take longer than the ones that establish a sale.

S E C T I O N 6 · C O M M E R C I A L

6.4 The access the company already holds

A network is only an asset if it can be described precisely enough to be tested. The table below is the current inventory. None of it is revenue.

Relationship or capability	Role it could play
ATB Financial relationship	Institutional perspective, financial data ecosystem, lending, and potential collaboration
Alberta credit union relationship	Consumer and lending insight, and potential financial institution access
Century 21 relationship	Real estate design partner and network access, through a realtor with twenty one years in the network
eXp Realty relationship	Large network scale case and potential enterprise access, through an owner reachable via a company contact
Mortgage practitioner relationships	Beachhead discovery and candidate design partners
Automotive relationships	Architecture test and second market discovery
Fasken, through Michael Stephens	Legal and regulatory counsel, and introductions where appropriate
Speer Technologies	Senior engineering capacity and specialised technical capability
Existing consumer network	Initial 4ormIQ distribution and the first consumer learning cohort

Legend. These relationships provide access and learning. They are not customers, signed distribution agreements, regulator endorsements or forecast revenue unless separately documented. The legal name of the credit union relationship is to be confirmed before this document is used externally.

The business development register, and what each entry must carry

Who they are	Why it could work	Where it stands
Partner	Problem 4orm solves for them	Internal relationship owner
Partner type	Why they might distribute it	Stage
People or organizations reachable	Commercial structure to explore	Probability
Transaction volume reachable	Integration required	Next conversation

Legend. A final field records the evidence required before the entry counts financially. This is what turns a good network into something an investor can evaluate without being asked to treat relationships as revenue.

S O U R C E S [Century 21 Canada](#) · [eXp Canada transition](#)

S E C T I O N 6 • C O M M E R C I A L

6.5 Six growth motions, not one acquisition engine

Customers arrive through six motions with different costs and cycle lengths. The model prices each one separately, and each carries its own failure mode.

Growth motion	Comparable	What it costs to acquire	2031 base revenue
4ormlQ, consumer	Borrowell, KOHO	Brand and creative spend, no revenue attached	Nil by design
Professional direct	Vertical software	\$600 per seat	\$4,455,000
Professional channel	Neo Financial	\$50,000 per partner, about \$800 per activated seat	\$34,155,000
Organization	Vanta, Drata analogues	\$8,000 per contracted firm	\$9,300,000
Embedded and platform	Flinks	\$30,000 per account, plus integration	\$7,425,000
Regulated infrastructure	Nasdaq Verafin	\$12,000 per named account	\$6,843,463

Legend. Comparables are growth precedents, not competitors. Network minimums of \$6,937,500 and evidence case usage of \$1,950,000 complete the \$71.1 million total.

What each motion is for.

The consumer layer buys attention and earns nothing. Direct seats prove the product will be paid for. Channel is where scale is available and where the plan is most exposed. Organization and embedded turn a seat business into a firm-level one, and regulated infrastructure is the high-value wedge.

What each motion needs before it can be counted

Motion	The evidence that opens it	The measure that keeps it open
4ormlQ, consumer	Checks run by people the company did not introduce	Return usage, and referral into a paid transaction
Professional direct	A firm that pays after a pilot, without a discount	Acquisition cost against first-year revenue
Professional channel	One network that puts the product in front of its members	Activation rate inside the network, not its size
Organization	One firm that renews without a discount	Contract value holding at renewal
Embedded and platform	One platform that ships an integration	Volume, and the minimum behind it
Regulated infrastructure	One institution treating the record as a control	Expansion inside the account

SECTION 6 · COMMERCIAL

6.6 Pricing architecture, and the comparables that bracket it

No price has been validated by a signed Canadian contract. Each line sits inside a band established by published or observed comparables, and each comparable is named so that the assumption can be challenged directly.

Revenue line	Low	Base	Blue-sky	Comparable that sets the band
Professional seat, per month	\$59	\$99	\$149	Follow Up Boss US\$58 to \$69; BNTouch US\$99 to \$165; AgencyZoom US\$149
Evidence case, per completed case	included	\$5	\$12	Verification floors: Sumsb US\$1.35; Veriff US\$0.80 to \$1.89
Organization platform, per year	\$12,000	\$30,000	\$48,000	Vanta at a US\$20,000 median; Drata US\$25,000 to \$45,000 mid-market
Network platform minimum, per year	\$24,000	\$75,000	\$120,000	Set by the reach a network distributes, not by seat count
Embedded platform minimum, per year	\$20,000	\$60,000	\$100,000	An annual commitment, not a small platform fee
Embedded usage, per check	\$1.50	\$3.00	\$4.00	Against a published vendor floor of \$1.13 a check
Consumer premium, per month	nil	nil	\$12.99	Aura US\$12 billed annually. Free in Low and Base

Legend. MODELLED ASSUMPTION. Comparables are adjacent products rather than direct substitutes. An **evidence case** is one completed transaction record produced and retained, modelled at twelve a year for the average professional.

Safeguarding rate card, retained from the company's earlier pricing work

Customer size	Core subscription per year	Basis
Small	\$29,450	Retained from the August 2026 pricing analysis
Mid-market	\$83,250	Retained
Enterprise	\$219,500	Retained
Institution	\$687,000	Retained
Weighted average used in the base case	\$71,255	Blended across the mix. Low uses \$48,932, Blue-sky \$119,404

Legend. AutoRek and Kani Payments publish safeguarding products without public prices. Guardexia publishes a standard platform at £2,500 per month for one entity. The card is benchmark-supported and remains unvalidated until Canadian contracts are signed.

SOURCES Vendr, Vanta · Persona pricing · Sumsb pricing · Guardexia pricing

S E C T I O N 6 · C O M M E R C I A L

6.7 Expansion sequence, and the reuse test that governs it

Each market after the beachhead is entered to test the architecture. The company treats the order as a hypothesis and the reuse threshold as a measured gate.

Market	Role in the sequence	What it tests
Automotive finance	Second decision integrity market	Consent, lender submissions, alternative offers, compensation, changing terms and consumer visibility
Real estate trust accounts	Parallel financial position discovery	Money position, authorization, reconciliation, exception handling and evidence
Investments	Later decision integrity expansion	Suitability evidence across an ongoing relationship rather than a single transaction
Insurance	Later decision integrity expansion	Recommendation evidence and consumer understanding in policy decisions and servicing
Payment service providers	Later financial position expansion	Safeguarding of end-user funds and the operational controls around it

Legend. A trust account is a bank account holding money that belongs to somebody else. Safeguarding is the equivalent duty for firms holding funds on behalf of payment users.

The reuse gate.

The second vertical must reuse at least 70 per cent of the core services, data model and evidence architecture, measured in code rather than asserted in a presentation. Identity and actors, permissions, provenance, versions, goals, options, consequences, conflicts, acknowledgement and evidence generation are counted. A shared brand, a shared login and a shared sales narrative are not. If the measurement falls below the threshold, the company narrows to the market that works and the plan is rewritten accordingly. The measured figure will be published either way.

Sequencing rule

One market at a time	A second market opens only after the first has produced paying customers and a measured adoption rate inside them
Discovery may run in parallel	Real estate trust discovery runs alongside the mortgage build because it tests the other half of the architecture at low cost
Expansion follows evidence	Neither enthusiasm nor an inbound request opens a market. Customer evidence does

S E C T I O N 6 · C O M M E R C I A L

6.8 Five Canadian companies that already ran these motions

None of these companies competes with 4orm Finance. Each one ran, in Canada and recently, one of the commercial motions inside this plan. They are listed to show that the mechanism has precedent here, not to borrow their growth rates.

KOHO, on consumer trust	Raised \$130 million in June 2026 at a \$1.33 billion valuation, and ranked second on the 2025 Deloitte Technology Fast 50 in its third consecutive year on the list. The lesson for 4orm Finance is that a consumer relationship can create strategic value well beyond the free product that started it
Borrowell, the closest analogue to 4ormIQ	Reports more than four million Canadian members after ten years, having moved from lending to a free credit score, then free monitoring, then a marketplace. The lesson is that a free consumer utility people actually use can build the relationship first and earn elsewhere
Neo Financial, on channel	Reports more than one million customers and more than 10,000 partners, with 1,279 per cent revenue growth recorded by Deloitte in October 2025. The lesson is that channel distribution behaves differently enough from direct selling that it has to be modelled separately
Flinks, on embedded infrastructure	Publishes connectivity to 15,000 North American financial institutions and more than one million secure connections a month. The lesson is that one infrastructure relationship can carry very large downstream volume, and should never be modelled as another seat subscription
Nasdaq Verafin, on regulated infrastructure	Grew revenue from US\$107 million in 2020 to US\$331 million in 2025, a 25 per cent compound rate, on average annual net revenue retention above 110 per cent and a client base up 38 per cent since acquisition. The lesson is that once regulated infrastructure is trusted and embedded, expansion inside existing accounts matters as much as new logos

What this section claims, and what it does not.

These companies do not establish that 4orm Finance will grow at the same rate. They establish that each commercial motion inside the thesis has a working Canadian precedent. Borrowell's current model includes partner-paid referral revenue, which raises a conflict question this company has not resolved. No referral revenue is carried in any 4orm scenario.

S E C T I O N 7 • F I N A N C I A L

7.1 Basis of preparation

The financial plan separates the company's growth engines rather than applying one acquisition curve across the business. Direct, channel, organization, embedded and regulated infrastructure growth each carry their own pricing, acquisition cost, capacity and retention assumptions. The basis is stated in full so that a reader can reproduce or contest any figure.

Model of record	4orm Finance master pro forma, rebuilt and controlled. It supersedes every earlier forecast
Currency and period	Canadian dollars, calendar years 2026 to 2031, Canada only
Method	Adoption-led. Year-end adoption is the input and revenue is the output. Each engine bills on the average of its opening and closing counts, so revenue reflects when a customer actually arrived
Scenario construction	Low, Base and Blue-sky differ in adoption, price, retention and which engines are permitted to operate. They are not one forecast with three sentiments
What is now modelled	Operating cost base, gross margin, EBITDA, the solved seed, a month-by-month cash bridge to the round, unit economics and an illustrative cap table
Excluded from all scenarios	Referral and lead generation revenue, grants and non-dilutive awards, second-regulator expansion, and international revenue

The one rule that governs the whole model.

No figure in this plan is reverse-engineered to a terminal number. The earlier model drove revenue from customer additions and could be tuned until it reached a chosen 2031 total. This one fixes year-end adoption first, prices it, and derives customer additions afterwards so that acquisition cost can be charged against them. Revenue is therefore an output. Section 7.7 sets out the bridge between the two.

Where a reader should check each answer

Question	Where the answer sits
What is the revenue forecast, and on what assumptions	Sections 7.2 to 7.4, with every assumption ranked in Appendix B
What does it cost to run, and when does it earn	Section 7.5
How much capital, and when	Section 7.6, including the month cash is tightest
What would prove the plan wrong	Sections 8.1 and 8.2, and the checks carried in 7.8
What changed since the last version	Section 7.7

Legend. No figure in this document appears without a route back to the model or to the source register.

S E C T I O N 7 • F I N A N C I A L

7.2 Revenue by scenario

Base is the planning case. Low is the case in which the company proves the product and fails to prove distribution. Blue-sky is two or three national networks adopting it, at which point adoption stops being linear. None of the three is built to a target: each is a set of year-end adoption curves priced at its own card.

Canadian dollars	2027	2028	2029	2030	2031	Paid seats at 2031
Low	\$161,132	\$870,852	\$2,587,432	\$5,863,956	\$10,540,040	10,000
Base	\$937,888	\$6,106,188	\$18,728,038	\$40,748,550	\$71,065,963	40,000
Blue-sky	\$3,391,718	\$20,954,087	\$68,379,001	\$155,181,796	\$260,556,914	80,000

Legend. Source: master pro forma, Executive Summary and Revenue Build tabs. Adoption is set first on the Adoption Curves tab; revenue is what the price card makes of it.

Chart. Total revenue by scenario in millions of Canadian dollars, drawn from zero and grouped by year. Three alternative futures, read side by side. The label above each group is the Blue-sky value, which sets the scale.

What separates the scenarios	Low	Base	Blue-sky
Network partners holding at 2031	40	110	225
Paid seats arriving through them	8,200	35,500	65,000
Active consumers using 4ormIQ at 2031	1,200,000	3,000,000	6,000,000
First EBITDA-positive year	after 2031	2029	2028

Legend. Channel performance is the single largest difference between the three. It is also the assumption with the least evidence behind it, which is stated plainly in Appendix B.

S E C T I O N 7 • F I N A N C I A L

7.3 Composition of base case revenue

Seven lines, one platform. The largest by a distance is channel-distributed professional seats, which is also the least proven part of the plan. Every other line is under fourteen per cent of the final year.

Revenue engine, base case	2029	2031	Share of 2031
Professional seats through channel	\$7,959,600	\$34,155,000	48%
Organization platform	\$2,100,000	\$9,300,000	13%
Embedded platform and usage	\$1,890,000	\$7,425,000	10%
Network platform minimums	\$2,175,000	\$6,937,500	10%
Regulated infrastructure, safeguarding	\$2,579,038	\$6,843,463	10%
Professional seats, direct	\$1,544,400	\$4,455,000	6%
Evidence case usage	\$480,000	\$1,950,000	3%
Total revenue	\$18,728,038	\$71,065,963	100%

Legend. Source: master pro forma, Revenue Build and RPAA Build tabs. Shares are rounded and do not sum exactly to one hundred.

Chart. Base case 2031 revenue by engine, drawn to one scale from zero.

Note. Concentration is a risk in its own right. Channel seats and the network minimums that come with them carry 58 per cent of 2031 revenue and rest on one assumption: that a signed network activates its members. The Control Panel switch that turns channel off is the honest test of what remains without it.

S E C T I O N 7 • F I N A N C I A L

7.4 Adoption, and what it represents against the counted base

Adoption is the input to this model, not its result. Each curve below is a management assumption with a validation test ranked in Appendix B, and every one of them can be typed over.

Year-end adoption, base case	2027	2028	2029	2030	2031
Active consumers using 4ormIQ	75,000	350,000	1,000,000	2,000,000	3,000,000
Professional seats, direct	250	800	1,800	3,000	4,500
Professional seats, through channel	250	3,200	10,200	22,000	35,500
Organization accounts	8	40	100	220	400
Network partners	4	18	40	75	110
Embedded accounts	1	8	20	40	70
Regulated infrastructure customers	5	20	45	75	110

Legend. Base retention is 90 per cent on professional seats, 92 per cent on organizations and embedded accounts, and 95 per cent on network partners, applied to the opening base each year. Retention is the share of customers present at the start of a year still present at the end of it.

Penetration at 2031	Low	Base	Blue-sky	Counted base
Active consumers	2.9%	7.2%	14.5%	41,417,056
Professional seats	4.6%	18.4%	36.8%	217,585
Organizations	3.2%	8.1%	14.2%	4,940
Payment service providers	6.0%	14.8%	29.5%	745

Legend. Penetration is expressed against counted populations rather than an estimated market size. The 745 payment service provider figure is a snapshot and is refreshed from the live register before this document is used externally. The consumer line is measured against the whole Canadian population, which is the least flattering denominator available.

Measure	2027	2031	Treatment
Free consumer checks in 4ormIQ	97,500	4,500,000	Funnel measure. Never counted as revenue in Low or Base
Evidence cases created	3,000	390,000	Usage revenue at \$5 per case in the base case
Embedded usage checks	12,500	1,375,000	Usage revenue at \$3 per check, against a \$1.13 vendor cost

Legend. Free is not free to the company: every consumer check carries a data and infrastructure cost inside cost of revenue. The consumer product is instrumented from launch so the relationship between free usage and professional demand can be measured rather than assumed.

S E C T I O N 7 • F I N A N C I A L

7.5 What it costs to run, and when it earns

The operating model is built from a small senior internal team, named external specialists, and acquisition cost separated by route. The base case turns EBITDA-positive in 2029 and needs no capital after the seed.

Base case, Canadian dollars	2027	2028	2029	2030	2031
Revenue	\$937,888	\$6,106,188	\$18,728,038	\$40,748,550	\$71,065,963
Cost of revenue	\$154,306	\$1,102,285	\$3,520,372	\$7,772,850	\$13,571,723
Gross profit	\$783,582	\$5,003,903	\$15,207,666	\$32,975,700	\$57,494,240
Gross margin	83.5%	81.9%	81.2%	80.9%	80.9%
Total operating expense	\$2,581,898	\$5,278,116	\$8,713,434	\$14,088,414	\$20,627,699
EBITDA	(\$1,798,316)	(\$274,213)	\$6,494,232	\$18,887,286	\$36,866,541

Legend. EBITDA is earnings before interest, tax, depreciation and amortization: what the business earns from operating, before financing and accounting charges. Base EBITDA margin reaches 52 per cent in 2031, and 2028 misses breakeven by \$274,213.

Where the operating cost goes in 2031, base case

Chart. Base case 2031 operating expense by line, drawn to one scale from zero. External engineering falls every year as internal capability builds; legal, security and audit rise with scale.

Note. The lean team is credible only if the outside specialist cost is visible, which is why it is shown as its own line rather than folded into overhead.

SECTION 7 · FINANCIAL

7.6 How much capital, and the month it matters

The seed is solved from the operating plan rather than chosen. It is the largest shortfall across the scale window, plus a three month cash cushion. On the base case that is **\$3.55 million**, closing in September 2027, four months after the pre-seed completes.

Capital position, base case	Value	Basis
Pre-seed equity, complete by May 2027	\$2,050,000	Two priced subscriptions of \$550,000 and three \$500,000 SAFEs, milestone-gated
Venture debt facility	Not drawn	\$500,000 available at 8 per cent. Switched off; the plan reaches the round on equity
Solved seed requirement	\$3,550,000	Largest shortfall across the scale window plus a three month cushion
Total equity through the seed	\$5,600,000	Pre-seed plus the solved seed. Debt excluded
Closing cash at end of 2031	\$65,325,277	After the seed, with no further round modelled

Legend. A cash cushion is the reserve the company holds beyond its committed spend. Base policy is three months of forward operating cost; Low uses two and Blue-sky six. The seed is priced at a \$30 million post-money, which is 4.9 times 2028 revenue.

The month that decides the terms.

Cash is tightest in **February 2027 at \$176,229**, and stands at **\$230,176** the month before the round, which is **1.0 months** of forward operating cost. A company negotiating with four weeks of cash is not negotiating. Closing earlier, adding a fourth SAFE, or drawing the facility are the three available answers, and the choice between them is set out in section 11 rather than left to the market. The plan reaches September 2027 without the facility, and that is the reference test rather than a comfortable margin.

Unit economics, base case

Measure	Low	Base	Blue-sky	Test
Direct seat payback	11.2 months	6.6 months	4.4 months	Under 12 months
Channel cost per first-year activated seat	\$700	\$800	\$1,000	Recovered through partner economics, not against direct cost
Network first-year revenue against enablement cost	0.85x	1.49x	1.69x	Above 1.0x after year one
Embedded usage gross margin	25.0%	62.3%	52.5%	Positive after published vendor cost
2031 revenue per internal person	\$301,144	\$1,184,433	\$1,488,897	Explainable, not maximised

Legend. Payback is the number of months of gross profit needed to recover what it cost to acquire the customer. Channel enablement is deliberately not tested against direct acquisition cost: a partner is bought once and distributes many seats, so the network minimum and the recurring seat value are what have to justify it.

S E C T I O N 7 • F I N A N C I A L

7.7 What changed from the previous model, and why

One correction moves everything. Revenue used to be driven by customer additions, which meant it could be tuned until it reached a chosen 2031 figure. It now falls out of year-end adoption, and the additions are derived afterwards so acquisition cost can be charged against them.

Measure	Previous model	Current model	Why it moved
2031 base revenue	\$24,058,337	\$71,065,963	Adoption multiplied by the price card, with network distribution priced explicitly
2031 internal headcount	77	60	Senior core, channel distribution and named external specialists
Revenue per internal person	\$312,446	\$1,184,433	A consequence of partner distribution, not a productivity claim
Solved seed	\$12.8M in 2028	\$3.55M in September 2027	The pre-seed ends in May 2027, so the seed funds scale rather than three more years of burn
2031 paid professionals	12,039	40,000	The aggressive Base assumes national network distribution. This is a pressure test, not a settled figure
Regulated infrastructure	74 customers by 2031	110 customers by 2031	14.8 per cent of the 745 snapshot. The old 29 per cent case is now Blue-sky

Legend. Source: master pro forma, Old Model Bridge tab. Two rows are marked in the workbook as pressure tests rather than rebuilt figures: paid professionals and regulated customers.

Read the increase carefully.

Revenue rose because the adoption the company is planning for was written down and priced, not because the market grew. The figure to argue about is 40,000 paid professionals, and one signed network settles it faster than a better model.

Illustrative ownership at a September 2027 close, for scale rather than for terms

Holder	Illustrative fully diluted
Founder	52.6%
Team, advisors and the two priced pre-seed subscriptions	17.0%
Seed investor	11.8%
Option pool created at the round	10.0%
Three pre-seed SAFEs, converting at their ceilings	8.6%

Legend. Illustrative only, at the carried \$30 million post-money, where all three SAFE ceilings bind. Conversion must be reconciled against the signed documents. It is not an offer.

S E C T I O N 7 • F I N A N C I A L

7.8 The checks the model runs against itself

The workbook carries its own integrity tests and prints them before anything else. All but one of them clear. The one that does not is printed here rather than removed, alongside the exposure that no check covers.

Check	Rule	Base result	Status
Professional penetration at 2031	Base at or under 20% of 217,585	18.4%	Pass
Consumer reach at 2031	Base at or under a disclosed Canadian comparable of 3.6M	3.0M	Pass
Regulated penetration at 2031	Blue-sky at or under 30% of the 745 snapshot	14.8% Base, 29.5% Blue-sky	Pass
Revenue per internal person	Base at or under \$1.4 million	\$1,184,433	Pass
Revenue growth 2028 to 2031	Below the strongest Canadian precedent	127% a year	Pass
Embedded usage gross margin	Positive after the published vendor cost	62.3%	Pass
First EBITDA-positive year	2029 or earlier	2029	Pass
Reaching the seed without the facility	Yes, on equity alone	Yes	Pass
Engines carried at zero	None shipped unsized	3	Review

Legend. Source: master pro forma, Checks tab. A review status is a flag for the reader, not a defect in the model. Every check that can fail is printed whether it passes or not.

The one review flag, and the exposure that is not a check

Three engines carry a switch and no sizing	Referral and marketplace revenue, second-regulator expansion and international each have a switch in the workbook and a 2031 target of zero. Turning one on adds nothing until a named partner, a reachable population and commercial terms are typed against it. The flag exists so a reader who finds an unused switch knows it was left empty deliberately rather than forgotten
Cash cover before the round	One month at the point the round is negotiated. This is not a workbook check and it is the most uncomfortable figure in section 7. The available answers are closing earlier, a fourth SAFE, drawing the facility, or reducing 2027 spend. The company would rather name the exposure than present a smoothed cash line

Note. The three engines above are excluded because turning them on would improve the numbers without evidence, and referral revenue in particular raises a consumer conflict question the company has not resolved.

S E C T I O N 8 • R I S K

8.1 Principal risks and the response to each

Risks are rated on the likelihood of the event occurring within three years and materially changing the plan. Each carries an early signal that would indicate it is occurring, so that the response is triggered by observation rather than by opinion.

Risk	Early signal	Response	Rating
An incumbent workflow platform adds a comparable record	A vertical platform ships a consumer explanation screen or an audit narrative	Hold the position at the consumer's side of a transaction that crosses five parties, which no single platform represents	High
Firms purchase only after an adverse event	Pilots convert only at firms with an open complaint or examination	Price the pilot to be affordable before an event and lead with the regulator's published finding	High
Adoption stalls inside a signed firm	Evidence cases per professional fall below half the modelled twelve per year	Place the record inside the existing transaction rather than beside it, and report usage to the principal broker	High
Safeguarding adoption falls short of the base case	Fewer than three signed safeguarding contracts by the end of 2027	Treat safeguarding as a named-account wedge with a defined funnel rather than a market that arrives unaided	High
Privacy exposure on contributed communications	A consumer or regulator questions the basis for holding a message	Consumer-contributed only, explicit purpose, Canadian storage, retention aligned to the firm's legal duty	Medium
Automated explanation becomes commoditised	Freely available tools explain a mortgage as well as the product does	The explanation was never the defensible position. Authoritative transaction state is: who authorised what, which version applied, and what was known at the time	Medium
The architecture does not carry to a second market	Measured code reuse below 70 per cent	Publish the measurement and narrow the company to the market that works	Medium
Regulatory direction changes	A regulator prescribes a specific form or a central portal	The obligation library is dated, so a rule change is a configuration exercise. A prescribed form becomes an output	Low

Legend. Rating reflects likelihood within three years, not the size of the consequence. The consequence of the first four risks is the same: the base case does not hold.

S E C T I O N 8 • R I S K

8.2 Kill criteria: the findings that would end the current strategy

These are recorded as falsifiable statements with the evidence that would establish each one. They exist so that a later version of the company cannot move them without saying so.

Statement that would end the current product	Evidence that would establish it	Position at 1 September 2026
Existing vertical software already produces a re-performable account of the decision	A demonstration inside any incumbent platform	Not identified in scanning or trade press
Regulated firms will not pay to evidence why a consumer received the outcome they received	Ten target firms decline a paid pilot at any price	Untested. Discovery in progress
A usable record cannot be produced without deep system integration	No usable record from documents, application data and contributed information	Untested. The first build is deliberately integration light
The architecture does not transfer to a second market at 70 per cent reuse or better	A measured code reuse figure below the threshold	Untested until the second market is built

Legend. A finding against any of the first three ends the current product configuration. A finding against the fourth ends the infrastructure thesis but not the company.

Validation questions carried in the model

Priority	Question	Evidence required
1	Will professionals pay \$99 per month for a seat	Ten or more design partner pricing conversations
1	Will an organization pay \$30,000 per year	Three signed Canadian organization contracts
1	Will a network pay a \$75,000 platform minimum, and activate its members	One signed network, and observed activation inside it
1	Can embedded partners support \$60,000 per year plus \$3.00 a check	Two partner letters of intent with expected volumes
1	Will safeguarding buyers accept the retained rate card	Three signed Canadian safeguarding contracts
2	Does the free consumer product generate professional demand	A measurable consumer to professional referral path
2	What is actual retention by product line	First twelve-month cohort measured by line

Legend. Source: the master pro forma, Assumptions Register. Priority 3 questions, including whether a paid consumer tier is ever introduced, are deferred by decision.

SECTION 9 • REGULATORY POSTURE

9.1 Engagement with regulators, and the limits the company observes

The company engages regulators for challenge and clarity. It does not seek endorsement, and it does not represent any regulator as a customer, promoter or partner.

Market	Body or programme	Current relevance
Mortgage and insurance	FSRA Innovation Office and test and learn environments	Guidance applies to mortgage brokers and several other regulated sectors, with consumer protection built into the framework
Alberta mortgage and real estate	RECA sector advisory and compliance contacts	Sector-specific regulatory compliance contacts are maintained for mortgage and real estate brokerages
Ontario real estate	RECO	Annual financial filing becomes mandatory on 1 October 2026, with monthly trust reconciliation planned for 2027
Automotive	OMVIC	Published financing disclosure guidance describes the consent and offer questions a transaction record would answer
Payments	Bank of Canada, retail payment activities supervision	Registration, operational risk management and the safeguarding of end-user funds
Capital markets	Alberta Securities Commission innovation programme	A route to test regulated concepts with a securities regulator where relevant

Legend. Regulatory references in this document are informational. They do not imply approval, endorsement or partnership.

A regulator can be a user of the product without being a customer of the company.

The architecture provides an oversight and reporting experience, and a regulator with verified authority could be given access to a record a firm is already required to produce. That is a **capability**. It is not a commercial relationship, a distribution channel or a source of revenue, and no regulator appears anywhere in the financial model. Wherever company material shows a regulator as a platform user, that distinction is stated on the same page.

Privacy and data protection position

Legal basis	Personal information is handled under the federal Personal Information Protection and Electronic Documents Act and its provincial equivalents
Consent and purpose	Consent is explicit, purpose is stated, and storage is Canadian
Consumer rights	The person can see what is held about them and can seek correction, within the limits of the firm's legal retention duty
Communications	Contributed by the consumer or the professional, never monitored

SOURCES [FSRA Innovation Office](#) • [RECO financial filing](#) • [Bank of Canada retail payments](#) • [Privacy Commissioner finding 2015-005](#)

SECTION 9 • REGULATORY POSTURE

9.2 Check the evidence yourself

Every regulatory claim in this document comes from a body that publishes its own findings, its own enforcement record and, in most cases, its own complaint volumes. The links below go to the source rather than to a summary of it, so a reader can test any figure without asking the company for it.

Body	What it publishes	Where to look
FSRA, Ontario	Sector supervision plans, enforcement actions, monetary penalties, licence revocations	Supervision plan; enforcement and warnings register; enforcement annual report
RECO, Ontario real estate	Complaint volumes, discipline decisions, the annual financial filing requirement	Annual report; complaints and discipline; annual financial filing
OMVIC, Ontario automotive	Charges laid, restitution to consumers, financing disclosure guidance	Annual report; consumer complaint channel
CSA and CIRO, securities	Sweep findings on suitability documentation, and the annual enforcement report	Staff Notice 31-368; CIRO enforcement report
Financial Consumer Agency of Canada	Bank complaint-handling rules, and the proposed fraud reporting obligations	FCAC; Financial Consumer Protection Framework amendments
Canadian Anti-Fraud Centre	Reported fraud losses and victim counts, updated through the year	Annual reports and reporting statistics
Bank of Canada	Retail payment supervision, and consumer-driven banking implementation	Retail payments supervision; consumer-driven banking
Financial Conduct Authority, UK	The motor finance redress scheme and its cost, as the international precedent	Policy Statement PS26/3

Legend. None of these bodies has reviewed, approved or endorsed this document or the company. They are cited because they publish, and because a reader should be able to check a claim without taking the company's word for it.

Published complaint volume is a floor, not a measure of harm.

A complaint is made after the fact, by a person who knew where to send it. The gap between incidents and complaints is the part of this market nobody counts, and it is the reason the company argues from regulator findings rather than from complaint totals alone.

S E C T I O N 1 0 • O R G A N I Z A T I O N

10.1 Team, advisors and the build partner

The founding team is drawn from controls disciplines outside software: life safety work in oil and gas, and systems work at WorkSafe BC. The company applies the same discipline to financial evidence, which is establishing that something was done rather than asserting it.

Name	Role
Chad R. Johnston	Founder and Chief Executive
Kevin Wong	Co-founder, go to market
Zahiruddin Sandeela	Systems architect
Mathew Mozaffari	Chief Technology Officer
Vacant	Regulatory lead, search in progress

Legend. The advisory bench is engaged for named skills rather than titles: Bruce Fair on capital markets, Miika Makela on capital strategy, Michael Stephens of Fasken on technology and the corporate framework, James Atherton of Capiche Legal on founder structuring, Dean McCall on the order in which buyer groups are approached, and Don H as the first investor in the company.

Build partner

Speer Technologies	Founded in 2019 and named twice to the Globe and Mail Top Growing Companies list, on three-year revenue growth of 1,005 per cent
Structure of the engagement	A phased statement of work with a named bench of ten engineers. Design authority and review remain with 4orm Finance
Rationale	A team of this size takes six to nine months to recruit and carries salary from the first month. The partner engagement begins on signature and concludes on delivery
Reference work	Oxford Properties, GreenShield with Deloitte, OnPath, Prolink, WinMagic, and Seity Health including a mental health assessment application for Pfizer. Each is a client of the partner rather than of 4orm Finance, and none is an endorsement

Note. Governance: the company does not hold or move client money, does not sign filings on behalf of a customer, and does not certify compliance. These constraints are recorded in the product specification as well as in this plan.

S E C T I O N 1 0 · O R G A N I Z A T I O N

10.2 The operating shape, by design

4orm Finance is built around a small senior core, a few strong partners, network distribution, and specialist expertise engaged where it creates more value than internal headcount. This is a design choice rather than a funding constraint, and it is stated here so that it can be tested rather than discovered later.

Function	Operating philosophy
Leadership	A small senior team, accountable for judgement rather than for volume of activity
Product and engineering	Strong internal design authority, with Speer and specialists engaged where they shorten the path
Regulatory and legal	Senior internal capability built over time, with Fasken and specialist counsel alongside it
Commercial	Partnerships and enterprise relationships ahead of a large outbound organization
Implementation	Reusable integrations rather than a custom services business
Consumer growth	Brand, content, relationships and distribution partnerships

Legend. Each line is a constraint on hiring as much as a description of it. A function that cannot be run this way is a finding, and the plan changes rather than the principle.

The plan is 60 internal people by 2031, and the figure it produces has to be argued for.

The operating model plans 60 internal people in the base case, against 75 the same plan would need with no workflow automation at all, and against 77 implied by the previous version. That produces \$1,184,433 of revenue per internal person, inside the company's \$1.4 million rule but far above the private software median. It is only defensible because external engineering, legal and security costs are carried visibly on their own lines, and if those rise the headcount plan changes rather than the efficiency claim.

Function	2027	2029	2031	Roles avoided through automation by 2031
Engineering and product	3	10	24	6
Customer success and implementation	1	3	10	4
Regulatory and evidence	1	3	7	2
Partnerships and enterprise	1	3	7	nil
Leadership, growth, finance and operations	2	5	12	3
Total internal headcount, base case	8	24	60	15

Legend. Source: master pro forma, Team & AI Leverage and Automation Leverage tabs. The plan avoids 15 hires against an unlevered 75, which is 20 per cent. Nobody is removed: these are hires the plan does not make, and switching the automation assumption off in the model brings all fifteen back at the loaded cost. No numeric productivity multiplier is applied anywhere: automation is assumed to defer hiring in routine work, not to replace judgement.

SECTION 10 • ORGANIZATION

10.3 What the lean shape costs, and what it demands in return

A small team is not automatically a cheaper one. It moves the difficulty out of hiring and into three things the company has to be measurably good at: writing a specification a partner can be held to, choosing the right partners, and managing them once they are engaged.

The trade, stated in both directions

What the company gains	What it has to be good at instead
Senior capability without a nine-month hiring cycle	Writing a specification a partner can be held to, and testing delivery against it
A cost base that moves with the work rather than ahead of it	Deciding what stops when a phase ends, rather than absorbing the team
Distribution through organizations that already hold the audience	Partner management, onboarding and activation as a real function
Focus, because a small team cannot do everything	Saying no in public, including to markets that ask for the product

Legend. The right column is the work. A company that is good at the left column and bad at the right one ends up paying twice.

What each external relationship carries, and what would end it

Relationship	What it removes from the internal plan	What has to be true
Speer Technologies	A nine-month engineering hiring cycle at the start	Signed scope, cost, capacity, ownership and support terms
Fasken and specialist counsel	A full internal legal department	Defined engagement scope, rates and access protocol
Creative capacity, led internally	A large internal marketing function	A campaign plan with funnel metrics and measured conversion
Network and channel partners	A large outbound sales organization	Named reach, activation assumptions and economics per partner

Legend. Source: master pro forma, Channel Pipeline tab. No revenue or cost saving is credited to any of these relationships in the model until the evidence column is satisfied.

Note. Section 7.5 sets out the selling capacity the same question raises on the commercial side. The two tests are run together, because a channel-led company and a direct-sales company do not need the same organization.

S E C T I O N 1 1 · I M P L E M E N T A T I O N

11.1 Sequence and gates

The sequence is deliberately short. Each stage produces the evidence that determines whether the following stage is funded.

Workstream	Deliverable	Completion
Consumer product	4ormIQ in market, with usage instrumented	Within 30 days
Market discovery	Ten structured mortgage discovery conversations, with pricing tested	Within 60 days
Business development	Twenty to thirty potential network, channel and institutional relationships identified, with exploratory conversations opened	Within 60 days, running in parallel
First product	A transaction record produced for a live mortgage file at a design partner	90 to 120 days
Finance	Operating cost model, earnings view, cash plan and capital requirement	Complete. Carried in section 7
Capital	Pre-seed completed at \$2.05 million, then a seed opened against the solved \$3.55 million requirement for a September 2027 close	Pre-seed closes May 2027
Regulatory	FSRA Innovation Office engagement and counsel review of the privacy position	Within 90 days
Second market	Automotive build, with code reuse measured and published	By mid 2028

Legend. The finance workstream the previous version left open is complete and sits in section 7. Capital is now the sequencing risk: the account holds about one month of cover in August 2027 and the round is planned to close the month after.

The business development track, first sixty days

Step	Output
Identify	Twenty to thirty candidate network, channel and institutional relationships, ranked
Open	Conversations asking whether they would buy, distribute, embed or refer
Qualify	Which could become design partners, and what structure fits
Restrain	Nothing enters the pipeline without a defined commercial next step

S E C T I O N 1 1 · I M P L E M E N T A T I O N

11.2 Conditions that must remain true throughout

The sequence in 11.1 can be met while the company drifts away from what it set out to build. These six conditions are the check against that. Each is written so that a breach is observable rather than debatable.

Work removed	The product removes more work than it creates, and each release names the step added and the step removed
Consumer benefit	The person gains understanding and control rather than another account to administer
Professional accountability	Judgement and the signature remain with the professional
Evidence integrity	Evidence remains source-linked, versioned and reconstructable
Architecture reuse	The architecture materially reuses across a second transaction type
Evidence-led expansion	Market expansion follows customer evidence rather than enthusiasm

What is being watched in the policy environment

Consumer-controlled financial data	The Consumer-Driven Banking Act received royal assent in March 2026, with draft regulations published in June. The framework covers consumer-authorized data from deposit, payment, investment and lending accounts, overseen by the Bank of Canada, with phase one limited to read-only access. The company's consumer permission and identity design sits in the same direction as Canadian infrastructure
Fraud responsibility moving to institutions	Proposed amendments pre-published in June 2026 would require banks to hold policies and procedures for detecting and preventing consumer-targeted fraud, to obtain express consent before enabling prescribed transfer capabilities, to let consumers disable those capabilities, and to report fraud data to the Financial Consumer Agency of Canada each year
Anti-fraud policy becoming operational	Finance Canada's 2026 work considered new market conduct requirements for regulated organizations to prevent, detect and disrupt fraud. Canadians reported more than \$704 million of losses in 2025, against an estimate that only 5 to 10 per cent of incidents are reported at all

None of this creates a duty the company can sell against today. It establishes that protecting a consumer before the money moves is becoming an institutional responsibility, which is the environment 4ormIQ launches into.

12.1 What the company is asking readers to decide

This plan is written to support four decisions. Each is stated with the information required to take it and the consequence of deferral.

Decision	What it requires	Consequence of deferral
Approve the beachhead selection	Acceptance that mortgage brokering in Ontario is the first paid market and automotive finance the architecture test	Discovery is spread across markets and no market is proven
Approve the pricing hypothesis for testing	Agreement that the price card may be taken to design partners as a hypothesis, labelled as one	Pricing conversations stall and the largest assumption stays untested
Approve the capital plan and its timing	Acceptance of a \$3.55 million seed solved from the operating plan, opened in 2027 against a September 2027 close	The round is negotiated from under one month of cash, which is a price the company pays in terms rather than in effort
Confirm the reuse gate	Acceptance that a measured reuse figure below 70 per cent narrows the company to one market	The infrastructure thesis stays unfalsifiable, which is the condition this plan exists to remove

Legend. Each decision has an owner and a date recorded in the internal plan. This document presents the basis, not the internal schedule.

What the company reports against

Reporting item	Frequency	Why it is reported
Named channel partners signed, and seats activated	Monthly	Channel seats carry 48% of base case 2031 revenue
Design partner conversations completed, with pricing responses	Monthly	The largest revenue assumption is the seat price
Paid pilots signed, and conversion from pilot to contract	Monthly	Distinguishes commercial progress from research
Evidence cases created per professional	Monthly, once live	Adoption inside a signed firm is a high-rated risk
Retention by product line	Quarterly, from the first cohort	Retention compounds against every later year
Measured code reuse at the second market	Once, on delivery	Determines whether the infrastructure thesis holds

Legend. Each item maps to a validation question in Appendix B and a risk in section 8.

The next work is proving or disproving this proposition rather than extending the architecture.

Ten Canadian firms testing it will produce more than another quarter of design.

A P P E N D I X A · D E F I N I T I O N S

Definitions

Terms used in this document carry specific meanings. They are set out here so that no reader has to infer one, and so that the same words mean the same things in the product specification and in the financial model.

Term	Meaning as used in this document
Transaction record	The structured record of a single consumer transaction: intent, permissions, facts, options, recommendation, consequence, acknowledgement, outcome and the evidence behind each
Evidence case	One completed transaction record produced and retained. The unit on which usage revenue is charged
Decision integrity	The application of the record to a recommendation or advised decision
Financial position integrity	The application of the record to money held on behalf of others, including reconciliation and exception handling
Suitability assessment	A written record showing why a recommended product fitted the particular consumer, including the reasoning and any exit strategy
Provenance	The traceable origin of information: which system or person it came from, when, and in which version
Trust account	A bank account holding money that belongs to somebody else
Safeguarding	The equivalent duty for firms holding funds on behalf of payment users, including how those funds are held and evidenced
Professional seat	One licensed individual using the product under a subscription
Organization account	A firm-level contract covering supervision, administration and evidence across that firm
Embedded access	Access to the product through another company's software, priced as an annual minimum plus usage
Annual recurring revenue	The annualised value of subscriptions in force at a point in time, before usage fees
Retention	The share of customers present at the start of a period who are still present at the end of it
Penetration	Customers expressed as a share of a counted population, never as a share of an estimated market

Legend. Where a regulator uses a term differently, the regulator's meaning governs and the difference is noted at the point of use.

A P P E N D I X B • A S S U M P T I O N S R E G I S T E R

Assumptions register

Every material assumption in the financial plan, its current status, and the evidence that would move it from assumption to fact. Nothing in this register is presented elsewhere in the document as established.

Assumption	Value used	Status	Evidence that would settle it
Channel partner acquisition	4 rising to 39 new partners a year	Assumption	A named channel pipeline with letters of intent
Seats activated per new partner	63 rising to 405	Assumption	Observed activation inside the first signed network
Channel enablement cost	\$50,000 per new partner	Assumption	The first five partner implementations, costed
Network platform minimum	\$75,000 per year	Benchmark-informed	Two or three signed network or platform contracts
Direct professional acquisition cost	\$600 per seat	Assumption	Twelve months of observed direct acquisition
Professional seat price	\$99 per month	Benchmark-informed	Ten or more design partner pricing conversations
Organization platform price	\$30,000 per year	Benchmark-informed	Three signed Canadian organization contracts
Embedded minimum and usage	\$60,000 per year plus \$3.00 per check	Assumption	Two partner terms carrying a minimum and a volume band
Evidence case fee	\$5.00 per case, twelve cases a professional	Assumption	Observed usage across the first cohort
Safeguarding rate card	\$29,450 to \$687,000 by size	Benchmark-supported	Three signed Canadian safeguarding contracts
Safeguarding adoption	110 customers by 2031, 14.8 per cent of 745	Assumption	A named-account funnel with a measured win rate

Legend. The first rows carry the highest revenue and capital risk. Appendix D states what would replace each of them.

Status	What it means
Benchmark-informed	A published comparable sets the band the figure sits inside
Benchmark-supported	A directly analogous product exists, without public pricing
Assumption	No external reference is available, and the figure is management's

Legend. Every figure in the register above carries one of these five labels, and none is presented anywhere else in this document as established fact.

A P P E N D I X B • A S S U M P T I O N S R E G I S T E R

Retention, operating and excluded assumptions

The second half of the register: what the plan assumes about keeping customers, running the company, and what it has deliberately left out.

Assumption	Value used	Status	Evidence that would settle it
Professional retention	90 per cent	Planning assumption	First twelve-month cohort measured by line
Organization and embedded retention	92 per cent	Planning assumption	The first renewal cohort in each line
Network retention	95 per cent	Planning assumption	The first renewal cohort
Internal headcount	60 in 2031, against 75 unlevered	Operating thesis	Measured workload, service levels and actual specialist invoices
Automation policy	No numeric productivity multiplier	Policy	Observed support deflection and engineering velocity
External specialist cost	Engineering falls, legal and security rise	Company plan	Signed scopes and actual invoices
Consumer adoption	75,000 rising to 3.0 million active users	Assumption	Observed traffic and conversion into a paid transaction
Consumer premium	Excluded from Low and Base	Decision	Willingness-to-pay testing after the free product has scale
Referral and marketplace revenue	Excluded from every scenario	Decision	A conflict and disclosure design the company can defend
Second-regulator expansion	Excluded from Base	Decision	Signed demand in a second regulated market
International expansion	Excluded from every scenario	Decision	A named jurisdiction, its rule set and a first customer

Legend. **Planning assumption** and **operating thesis** mean management has chosen a way of working and will measure it. **Policy** and **decision** mean it has deliberately declined to model something.

Why the exclusions matter as much as the inclusions.

Referral revenue and second-regulator expansion would both improve the numbers, and both are switched off in the model rather than argued about. Referral revenue in particular raises a consumer conflict question the company has not resolved, and a trust product that earns from the party it is checking is not a trust product.

Note. Three switches in the model turn these engines on, and all three are set to zero. They are recorded here so that a reader who finds them in the workbook knows they were left empty on purpose rather than forgotten.

S21	More than 43,000 property and casualty insurance brokers	Insurance Brokers Association of Canada
S22	Complaint and investigation volumes for 2025	OBSI 2025 Annual Report
S23	A dealer unable to produce evidence of consent after records were destroyed	Privacy Commissioner of Canada, PIPEDA finding 2015-005

How sources are graded in the model

Grade	Meaning	Example in this document
Primary, regulator or law	A statute, regulation, regulator publication or official register	FSRA supervision plan; Retail Payment Activities Regulations
Primary, company	A company's own published material, including pricing pages	Persona, Sumsub, Guardexia
Primary, industry body	An association count or annual report	CREA, CADA, IBAC
Secondary, observed	Aggregated contract or survey data from a third party	Vendr contract data; Bridge Group research
Internal	The company's own analysis or register rebuild	The 745 firm safeguarding snapshot

Legend. Where a source publishes on a rolling basis, such as the regulatory actions register, the figures quoted are those published between March and August 2026.

A P P E N D I X C · S O U R C E R E G I S T E R

International sources and pricing comparables

International sources establish that regulated firms purchase outcome evidence where a duty requires it. Pricing sources establish the bands inside which each price in section 6.6 sits.

Ref	What it supports	Source, with link
S24	Consumer Duty in force 31 July 2023 and 31 July 2024	FCA Policy Statement PS22/9
S25	Data and management information alone do not establish consumer outcomes	FCA, outcomes monitoring, July 2026
S26	Motor finance redress scheme: £9.1 billion, 12.1 million agreements, £829 average	FCA Policy Statement PS26/3
S27	Absence of evidence of disclosure supports a presumption that no disclosure was made	FCA Consultation CP25/27
S28	Funding rounds of £11 million in 2024 and £12 million in 2026, and named enterprise customers	Aveni and Edinburgh Innovations
S29	More than 500 million customer interactions analysed	Recordsure, TCC RegTech
S30	Consumer-supplied assessment, integrations and named clients	MorganAsh
S31	Vulnerability assessment and outcome surveys by widget or interface	Comentis
S32	End-to-end safeguarding automation and a published Canadian case study	AutoRek
S33	Safeguarding calculation and reporting product published without pricing	Kani Payments
S34	Standard safeguarding platform published at £2,500 per month for one entity	Guardexia

Why the register exists	A reader should be able to check any figure in this document without contacting the company, and should be able to see which figures rest on a regulator, which rest on a company's own published claim, and which rest on internal analysis
How the international sources are used	To establish that regulated firms purchase outcome evidence where a duty requires it, and to identify the product areas the company has decided not to enter. No Canadian revenue figure depends on any of them

A P P E N D I X C • S O U R C E R E G I S T E R

Pricing and capacity comparables

Each comparable establishes a band for a price in section 6.6. None is a direct substitute for the product, and the model records that distinction on every line.

Ref	What it supports	Source, with link
S35	Professional software benchmark, US\$58 to US\$69 per user per month	Follow Up Boss
S36	Mortgage professional benchmark, US\$99 to US\$165 per user per month	BNTouch
S37	Insurance professional benchmark, US\$149 to US\$349 per month	AgencyZoom
S38	Dealer software benchmark, US\$99 and US\$199 per month	DealerCenter
S39	Evidence platform contracts at a US\$20,000 median	Vendr, Vanta
S40	Evidence platform contracts at US\$25,000 to US\$45,000	Vendr, Drata
S41	Embedded platform from US\$250 per month plus usage	Persona
S42	Verification pricing floors, US\$1.35 and US\$1.85	Sumsb
S43	Verification pricing floors, US\$0.80 to US\$1.89	Veriff
S44	Consumer protection subscription at US\$12 per month billed annually	Aura
S45	Free consumer checking as a category	ScamAdviser
S46	Quota attainment, median quota and ramp benchmarks for enterprise sellers	Bridge Group 2026 research

How a comparable is used	How it is not used
To establish what a buyer in an adjacent category already pays	To assert what this buyer will pay
To set an upper and lower bound for a scenario	To justify a single point price
To flag where no comparable exists at all	To fill the gap with an estimate

Legend. Where a directly analogous product publishes no price, the model records the absence rather than inventing a figure. AutoRek and Kani Payments are the two examples.

A P P E N D I X D • M O D E L D O C U M E N T A T I O N

Model documentation

The structure of the financial model, what it contains, what it excludes, and how it relates to the company's earlier forecasting work.

Tab	Contents
Control Panel	Scenario selector and the operating switches that turn each revenue engine off
Scenario Inputs	Prices, retention, activation and annual additions for all three scenarios
Revenue Build	The bottom-up build for all six engines, direct and channel separated
RPAA Build	The safeguarding customer build and rate card
Cost Drivers	Acquisition cost by route, delivery cost by layer and the payroll assumptions
Team & AI Leverage	Internal headcount by function, with the automation assumption stated per role
5-Year P&L	Revenue, cost of revenue, gross margin, operating expense and EBITDA
Capital Required	The solved seed, the cushion policy and the first EBITDA-positive year
Cash Bridge	Month by month cash to the round, and the month it is tightest
Unit Economics	Payback, channel enablement cost, usage margin and revenue per person
Channel Pipeline	Named relationships, what each could unlock, and the evidence needed first
Adoption Curves	Year-end adoption by scenario, benchmarked line by line. The forecast starts here
Checks	The model's own integrity and pressure tests, including the review flag
Old Model Bridge	What changed from the previous forecast, and why
Source Register	Every external benchmark with a link and an access date

Legend. Source: 4orm Finance master pro forma, rebuilt and controlled, 31 August 2026.

One item should be corrected in the next revision of the workbook. Several terminology panels still describe Blue-sky as **\$100 million to \$175 million** of 2031 revenue, which was the range before the model became adoption-led. The Blue-sky adoption curves now produce **\$260.6 million**. The figures in this plan follow the reference blocks, because those are the ones the revenue reconciles to.

A P P E N D I X D • M O D E L D O C U M E N T A T I O N

Model documentation, continued

What the current model keeps from earlier work, what it retires, and the assumptions an investor should attack first.

Relationship to earlier work

Element of the earlier model	Treatment in the current model
Safeguarding subscription architecture and rate card	Retained. It remains the basis for the safeguarding line
Source-backed pricing method and explicit no-comparable flags	Retained as the method for every price in this plan
Separation of market boundary from revenue expectation	Retained. A population is never multiplied by a price
The previous revenue forecast and customer counts	Retired. Superseded by the current build, with the bridge in section 7.7
Earlier market size figures	Retained as research context only, and not used as a denominator
Safeguarding adoption rate	Reset to 6 per cent in Low, 14.8 per cent in Base and 29.5 per cent in Blue-sky of the 745 firm snapshot

Legend. The bridge between the two models is documented inside the workbook so the change can be audited rather than taken on trust.

The five assumptions to attack first

Assumption	Base shape	What would replace it
Paid professionals at 2031	40,000 seats, 18.4% of a counted 217,585	One signed national network, and observed activation inside it
Channel partner acquisition and activation	110 partners; 63 to 405 activated seats each	A named channel pipeline, letters of intent and observed pilot activation
Channel enablement cost	\$50,000 per new partner	The first five partner implementations, costed
Network platform minimum	\$75,000 a year	Two or three signed network or platform contracts
Lean internal headcount	60 people in 2031, 15 hires avoided against 75	Measured workload, service levels and actual external specialist invoices

Legend. Source: master pro forma, Assumptions Register and Old Model Bridge. Every one of these is ranked as a company assumption rather than an observation, and all five carry high revenue or capital risk. They are printed here so that a reader can go straight to the weakest part of the plan.

Note. Three revenue engines are switched off in every scenario and can be enabled in the model: referral and marketplace revenue, second-regulator expansion, and international. All three are excluded because enabling them would improve the numbers without evidence, and referral revenue raises a consumer conflict question the company has not resolved.

A P P E N D I X E · M A R K E T E V I D E N C E

Market evidence: practitioner and consumer accounts

Primary and published accounts gathered during discovery. They are qualitative evidence of the failure described in section 3 and are presented as accounts rather than as findings.

Practitioner accounts, collected by the company in August 2026

"You should enter the information once, and it should then flow into ten other applications instead of being used only for the legal part of the transaction."

Realtor, twenty one years registered, Century 21 network. Transcript lightly edited for readability

"The system could confirm that a file is complete, identify what is missing, record when it was sent to the lawyers, flag deficiencies, and show how many times an agent was notified."

The same call, describing the product without being prompted

"I would not promote this to individual agents. I would promote it directly to brokers."

The same call, on route to market

Published accounts

"The broker said he did verbally inform the borrower and his wife of the five-year repayment rule, but could not include written information because the documents are system generated and cannot be modified."

Broker's account of a disputed mortgage penalty, CBC Go Public, 2017

"If I had all the information in front of me, I would have made a different decision."

The consumer's account of the same transaction

Note. Neither party in the 2017 account could evidence their version. The company treats this as the defining shape of the failure: two credible accounts, one transaction, and no record capable of settling the difference.

What the accounts have in common	What that indicates for the product
Information exists but is not connected	The requirement is a join across systems, not another system
The professional is not disputing the obligation	The purchase is about proof, not about persuasion
The failure surfaces months later	The record must be created during the transaction, not assembled afterwards

Legend. Qualitative evidence. It informs the product specification and is not used to size the market or to support any figure in section 7.

A P P E N D I X E · M A R K E T E V I D E N C E

Consumer complaint accounts, and what they have in common

Each account below is a published complaint about a financial transaction. They are included because each turns on what was said rather than on what was signed.

"We were assisted by a salesman who told us financing would be \$57 plus tax per week, including extras. When I asked how long the loan was, he said 228 months, but explained it was five years."

Complaint against an Ontario used vehicle dealer, Better Business Bureau, September 2025

"I called prior to my appointment to confirm I had coverage available. I was told by telephone on November 5th and 6th 2024 that I was covered."

Complaint against an insurer, Better Business Bureau, March 2025

"The fact that there were zero registered offers, that we were misled with false information in order for us to put in our top price."

Homebuyer who filed a complaint with the Real Estate Council of Ontario, CBC, December 2022

Common feature	Consequence
The dispute concerns a conversation	The consumer's evidence is recollection; the firm's evidence is a signed form that does not record the conversation
The document exists and is not in dispute	Document retention did not prevent the complaint and does not resolve it
The firm may have acted properly	Without a record the firm cannot demonstrate that it did, and the outcome turns on credibility

Legend. These accounts are qualitative. They are not presented as evidence of wrongdoing by any named party, and the company draws no conclusion about the merits of any individual complaint.

The pattern across every account in this appendix is the same.

A transaction occurred, both parties describe it differently, and no record exists that can establish which description is accurate.

A P P E N D I X F · A R C H I T E C T U R E

The rest of the architecture, for the build conversation

Sections 2 and 5 describe what the platform is and why. This appendix carries the remainder of the architecture as it appears in the company's own diagrams, so that a technical reader is not asked to infer it. It is capability, not implementation.

Who can enter the platform	How they are onboarded	What that means commercially
Consumers	40rmIQ, minimal friction, light identity	No fee in any scenario
Professionals and firms	Verified firm, then roles inside it	The paying customer
Regulators	Authority verified	A capability of the platform. Not a customer, not a channel, and not in the model
Partners and third parties	Contracted access	Network, embedded and integration relationships

Legend. The regulator row is the one most often misread. Section 9.1 states the distinction in full: an oversight experience can exist without a commercial relationship behind it.

Foundation services, shared across every domain

Service	What it provides
Identity and access	Single sign-on, multi-factor authentication, role and attribute based access, tenant isolation
Tenant and organization management	Multi-tenant design, organizational hierarchy and roles, branding and policy
Configuration and rules	Business rules, workflow rules, eligibility and suitability logic held as configuration
Workflow and tasks	Dynamic workflows, tasks and reminders, escalation and routing
Audit and monitoring	System audit logs, user activity, performance and health
Encryption and key management	Encryption at rest and in transit, key rotation and control
Data governance and retention	Retention policies, legal holds, purge and archival

Legend. These exist in every serious platform. They are listed because a firm's security review asks for them by name, and because the retention and legal hold service is what makes the consumer deletion right in section 5.4 legally honest.

A P P E N D I X F · A R C H I T E C T U R E

The qualities the architecture is judged on

Six properties, each written so that a build partner demonstrates it rather than agrees with it, on the same basis as the five principles in section 5.7.

Quality	What it has to mean in practice
Scalable	Components scale independently, so one busy domain does not slow the others
Secure	Security is designed in rather than added at review
Resilient	High availability and fault tolerance, because an evidence system that is down during an examination has failed
Observable	Monitoring, alerts and tracing, so a failure is known before a customer reports it
Modular	New domains and connectors added without rebuilding the core
Extensible	Application programming interfaces, webhooks and events, so a partner can build against it

Legend. An evidence system that is unavailable during an examination has failed at the only moment it existed for. That is why resilience is on this list rather than in an operations manual.

Why this appendix exists at all.

A firm's security review asks for these by name, and a build partner prices against them. Putting them in an appendix rather than the main narrative keeps the plan readable for a commercial audience while giving a technical reader what they need to assess the same company.

Where each quality is tested in this plan

Quality	Where it appears as a commitment
Scalable and modular	The reuse gate in 6.7: a measured 70 per cent reuse at the second market, published either way
Secure and resilient	The security, audit and insurance line in 7.5, which rises every year rather than being absorbed
Observable	The reporting items in 12.1, which depend on instrumentation existing from launch
Extensible	The embedded and platform motion in 6.5, which only works if a partner can build against it

Legend. A quality that appears nowhere else in the plan is decoration. Each of these carries a cost, a gate or a commitment somewhere in the document.

Note. Nothing here commits the company to an implementation. The retention and legal hold service is the one item with a direct consequence in the main plan: it is what makes the consumer deletion right in section 5.4 legally honest rather than aspirational.
