Major financial decisions.

Easier to understand. Easier to explain.

THE CHALLENGE

Recent Canadian compliance and anti-money laundering regulations and laws, along with significant penalties, are pressuring businesses and increasing compliance costs and workloads.

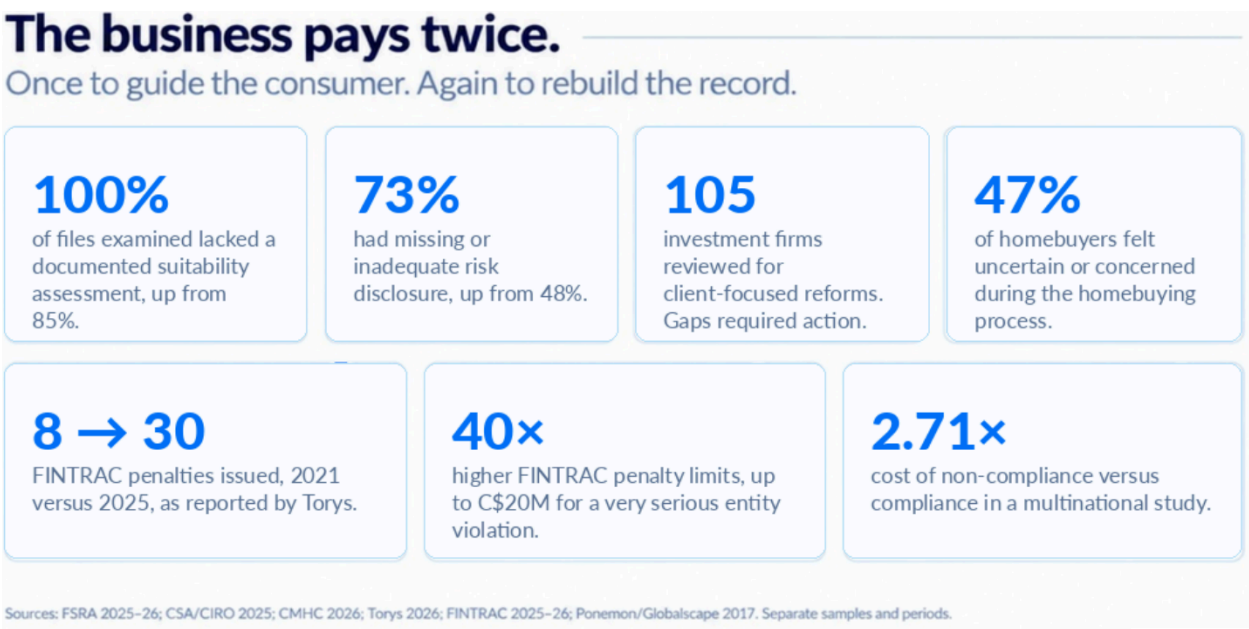

The question no one can seem to answer for us:

How can a business prove suitability when it hasn't established what suitable means for the person?

OUR SOLUTION

4orm Finance is building integrated “counselling-centered” intelligence tools for businesses to enhance their client discovery experience. The tools allow clients to privately explore major financial decisions, model and optimize potential outcomes, and comprehend potential short- and long-term risks. This experience enhances the client’s ability to move forward with greater clarity and confidence.

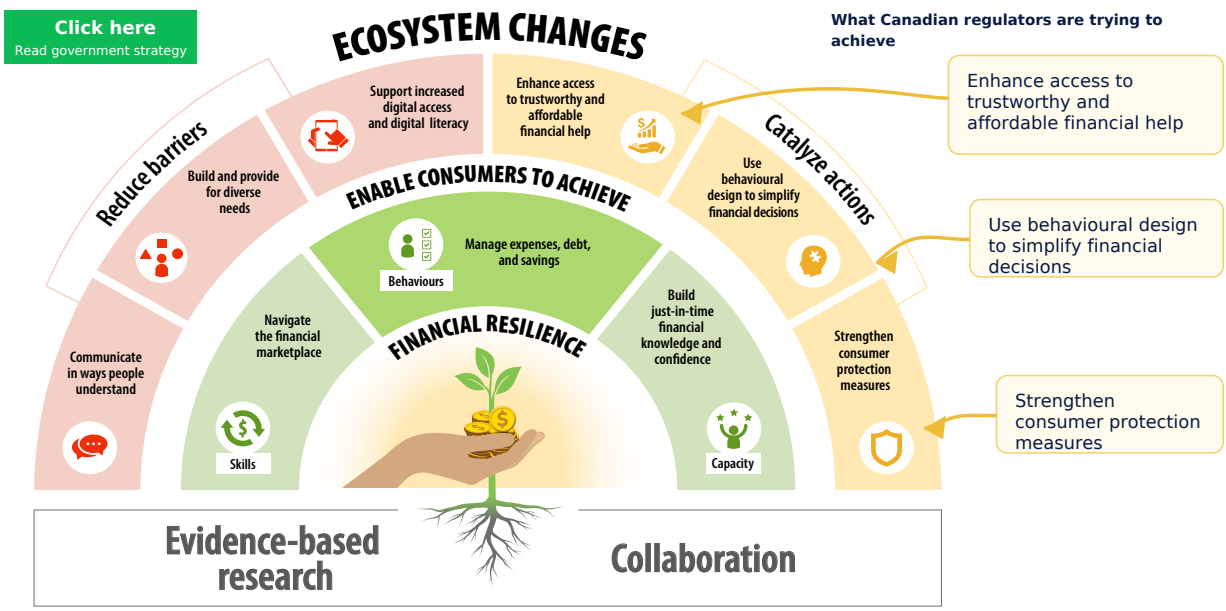

4orm Finance integrates into the business’s existing applications and compliance tools, helping to reduce costs and discovery time while supporting the suitability procedure and creating an auditable record throughout the decision process.

What Canada is trying to achieve.

How 4orm helps businesses put it into practice.

Canada's National Financial Literacy Strategy emphasizes stronger consumer understanding, simpler financial decisions and stronger consumer protection. 4orm helps businesses operationalize that direction inside real workflows.

How 4orm turns this into a business workflow

01
Explore privately
Goals, concerns, scenarios and risks are explored in the person's private account.

02
Build understanding
Plain-language guidance and just-in-time education help make sense of the trade-offs.

03
Share by choice
The client decides what matters and what they want to share with the business.

04
Support the professional
Richer client context helps the professional make a more suitable recommendation.

05
Preserve the why
An auditable record captures the reasoning and suitability evidence at the point of decision.

Better consumer understanding and outcomes → a practical workflow businesses can use, with evidence created as the decision happens.

Where the alignment is strongest

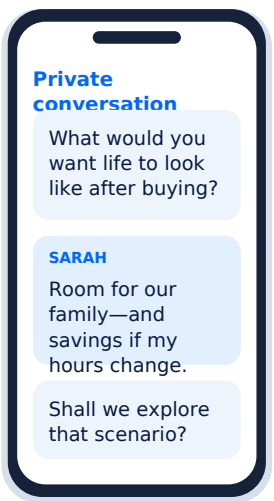

Canada's priority	How 4orm helps
Enhance access to trustworthy and affordable financial help	→ Private counselling-centred exploration helps people work through goals, concerns and scenarios, then choose what to share with a professional.
Use behavioural design to simplify financial decisions	→ Just-in-time explanations, scenario modelling and plain-language prompts help people understand trade-offs at the point of decision.
Strengthen consumer protection measures	→ Client-controlled sharing, suitability context and an auditable decision record help businesses preserve why the recommendation made sense.

Consumers are already adopting a new way to understand their finances.

Businesses are already proving the economics.

Consumer behaviour shows growing comfort with digital financial tools - while major decisions still benefit from human support. In financial services, comparable workflow technologies are already cutting review, administration and onboarding time.

The opportunity for 4orm

Bring private financial exploration, risk awareness and consumer choice into the professional setting — while helping businesses reduce manual work, improve oversight and preserve a defensible record of how decisions are reached.

Published company surveys and customer case studies; different products, markets and workflows. These validate adoption and operating leverage, not measured 4orm outcomes.

Market opportunity.

A business workflow problem with a large recurring revenue pool.

4orm starts in mortgage and expands into adjacent regulated decisions where businesses need better client understanding, workflow efficiency and auditable evidence.

C$1.77B

Broader Canadian market opportunity

Modelled full-penetration estimate · Pending validation

Businesses pay to guide the decision — and to preserve the why.

C$94.7M

2031 base-case revenue

~3.5%

penetration of the currently identified financial firm market

Why this is credible

- Starts with a focused mortgage workflow
- Subscription + decision-record model
- Expansion from one regulated path into adjacent markets
- Savings tied to efficiency, evidence and client experience

Partner, Fasken, Vancouver.

Ranked in Best Lawyers in Canada for technology law. Owns the securities framework.

Dean McCall
Growth strategy
Digital Mass Consulting · Startup advisor.

Fifteen years moving companies from concept to scale. Owns go-to-market sequencing.

Why invest in 4orm.

A growing business problem. A clearer workflow. A large market opportunity.

01 Growing business problem

Compliance pressure is increasing, while documentation alone still fails to show what the client understood and why the recommendation made sense.

02 Founder-product-market fit

4orm comes from direct experience in high-consequence operating systems, business building and financial decision support.

03 We understand the consumer

The founders have worked one-on-one with hundreds of people directly and supported thousands indirectly through financial decision-making, risk and behaviour change.

04 Business-first savings

4orm helps businesses reduce repeated discovery, improve suitability evidence, integrate with current tools and provide a better client value-add.

05 Built to protect people before money moves

4orm is building tools that help businesses protect people before money is ever moved — and preserve why the decision made sense.

06 Strong build and advisory support

Speer, legal counsel and experienced advisors strengthen delivery, governance and readiness for regulated clients.

4orm gives businesses tools to guide clients more clearly, understand them better and preserve the evidence regulators increasingly expect.

That creates savings for the business and better outcomes for the people they serve.

People trust Clear Outcomes.

Current Financing: C$500K pre-seed now. C$2M to follow.

4orm is raising the first C$500K to fund the next build-and-validate gate, with a planned C$2M follow-on pre-seed round to complete the broader execution plan.
