

Six lines, each priced and switched on its own

Every dollar of revenue in the plan comes from one of six lines or from the services sold alongside them. Each line has its own price, its own attachment ramp and its own switch, so a reader can turn one off and recalculate rather than argue about it.

LINES, EACH WITH A
SWITCH
AND A PRICE FACTOR

1 The six lines, and what else is in revenue

Line	2027	2028	2029	2030	2031	Five year
A, subscription	\$1,808,948	\$8,773,053	\$21,786,639	\$36,856,947	\$52,279,213	\$121,504,800
B, retention and archive	\$36,179	\$315,830	\$1,045,759	\$2,063,989	\$3,136,753	\$6,598,509
D, review and annual report packs	\$92,798	\$958,847	\$3,458,543	\$6,761,016	\$10,346,903	\$21,618,107
E, second regulator	\$0	\$698,381	\$3,361,507	\$8,222,861	\$13,766,769	\$26,049,518
F, retrieval and attach meters	\$167,700	\$1,706,681	\$5,897,543	\$11,467,739	\$17,035,003	\$36,274,667
Recurring from the lines	\$2,105,625	\$12,452,792	\$35,549,992	\$65,372,552	\$96,564,640	\$212,045,601
C, evidence reconstruction	\$834,300	\$2,466,000	\$3,657,283	\$2,616,409	\$1,941,306	\$11,515,297
Services and engagements	\$940,000	\$2,833,000	\$4,971,000	\$5,726,000	\$6,771,000	\$21,241,000
TOTAL REVENUE	\$3,879,925	\$17,751,792	\$44,178,275	\$73,714,961	\$105,276,946	\$244,801,899

Legend. Five of the six lines recur. Line C is the one designed to shrink, and the workbook fails a check if it is ever larger in 2031 than in 2028. The institution and platform contract line carries nil in the base case and is not shown. Source: the master pro forma, base case, Canadian dollars.

Line A, the subscription

Every day the system reads what the bank holds and what the books say each customer is owed, compares them, records the answer and seals it. That sealed daily record is the subscription, and at \$52,279,213 in 2031 it is the largest line in the plan.

Tier	The card	2027	2028	2029	2030	2031
Command and institution	\$687,000	\$0	\$0	\$429,375	\$1,704,619	\$3,800,355
Enterprise and complex	\$219,500	\$244,742	\$1,300,373	\$3,430,354	\$6,276,962	\$9,529,988
Mid market regulated	\$83,250	\$371,295	\$1,961,636	\$5,342,830	\$9,598,217	\$13,929,422
Small regulated firm	\$29,450	\$903,011	\$4,466,936	\$10,486,000	\$16,046,918	\$20,666,383
Partner and white label	\$130,000	\$289,900	\$1,044,108	\$2,098,079	\$3,230,233	\$4,353,064
TOTAL LINE A		\$1,808,948	\$8,773,053	\$21,786,639	\$36,856,947	\$52,279,213

Legend. Customers billed in the year, weighted by the price each cohort signed at, times the card. The card steps once, on 1 January 2028, and a firm keeps the price it signed at for as long as it stays.

2 Where the subscription money actually sits

Small regulated firm		\$20,666,383	631 firms
Mid market regulated		\$13,929,421	156 firms
Enterprise and complex		\$9,529,988	41 firms
Partner and white label		\$4,353,064	31 partners
Command and institution		\$3,800,355	6 institutions

Bars start at zero and run to \$20,666,383, the 2031 subscription of the smallest tier. The tier with the lowest price carries the most money and the tier with the highest price carries the least, which is why the customer count matters more than the card.

The risk in the smallest tier is signing 631 firms, not what each one pays.

631 of the 835 customers at 2031 sit in that tier and carry \$20,666,383 of revenue. Cutting its price by a fifth costs 4.7 per cent of the 2031 total, so the price is a go to market decision rather than a lever on the headline.

Lines B and C, keeping the record and rebuilding the one nobody kept

One line survives the subscription being switched off. The other is designed to expire, and the workbook checks that it does.

3 Line B, retention and archive

Input	Basis	2027	2028	2029	2030	2031
Archive fee, share of the tier card	20%					
Attachment, share of the base	ramped	10%	18%	24%	28%	30%
TOTAL LINE B		\$36,179	\$315,830	\$1,045,759	\$2,063,989	\$3,136,753

Legend. Seven years of sealed daily records, indexed so a single day can be produced in seconds. It is nil in the design partner year, because retention only sells once there is something worth retaining, and it survives the subscription being switched off, because a firm that stops buying the daily record still owes the retention on what it already has.

4 Line C, evidence reconstruction, which is built to shrink

Input	Basis	2027	2028	2029	2030	2031
Discount off list, by the year sold	ladder	40%	25%	10%	0%	0%
Attachment on new logos	ramped	90%	80%	60%	35%	15%
Reconstruction sold on new logos		\$834,300	\$2,466,000	\$3,385,800	\$2,058,000	\$1,014,750
Event tail revenue		\$0	\$0	\$271,483	\$558,409	\$926,556
TOTAL LINE C		\$834,300	\$2,466,000	\$3,657,283	\$2,616,409	\$1,941,306

Legend. Priced at \$90,000 for command and enterprise, \$45,000 mid market and partner and \$15,000 small, on a discount ladder that starts at forty per cent off while the first customers are being won and narrows as the regime matures. The event tail is bought after an examination, a failed reconciliation or a change of custodian, at forty per cent of the full rebuild price.

A reconstruction line that grows would mean the model is wrong.

A firm registered in 2025 has three years of unkept ledger to rebuild. A firm signing in 2031 has almost none, because every year the regime runs the gap gets shorter. The line falls from **\$2,466,000** in 2028 to **\$1,941,306** in 2031, and the workbook carries a check that fails if it ever does otherwise.

Line D, the filings owed on a date

Three separate filings, each owed by a date rather than on request, and each assembled out of records the system already holds.

Pack	Priced at	2027	2028	2029	2030	2031
Review cycle pack	One third of the card	\$30,149	\$438,653	\$1,815,553	\$3,685,695	\$5,750,713
Annual report pack	\$3,000 to \$35,000 by tier	\$42,750	\$327,188	\$1,019,892	\$1,940,127	\$2,870,975
Anti money laundering pack	22 per cent of the card	\$19,898	\$193,007	\$623,098	\$1,135,194	\$1,725,214
TOTAL LINE D		\$92,798	\$958,847	\$3,458,543	\$6,761,016	\$10,346,903

Legend. The annual report is the only obligation in the regime carrying a fixed statutory date, 31 March, and every registered provider owes it every year without exception. About a third of customers are in their review year at any time once the three year cycle is running, which is what the review pack attachment builds up to.

5 Line E, the second regulator, and why it is quoted switched off

Tier	Annual fee	2027	2028	2029	2030	2031
Command and institution	\$150,000					
Enterprise and complex	\$100,000					
Mid market regulated	\$50,000					
Small regulated firm	\$25,000					
Share of the base carrying a second duty	ramped	0%	15%	30%	45%	55%
TOTAL LINE E		\$0	\$698,381	\$3,361,507	\$8,222,861	\$13,766,769

Legend. Partners resell rather than carry a second duty of their own, so they carry no fee. A property brokerage holds deposits under a provincial real estate act and a law firm holds retainers under a law society rule. The daily record is the same record, so this line charges to configure it against a second rule set rather than to rebuild it.

This is the most sensitive input in the model, and it should be quoted switched off.

No published Canadian figure exists for the share of firms carrying a second regulated duty. The workbook flags the line above fifteen per cent of revenue, and turning it off takes 2031 revenue to **\$91,510,177** without breaking a single check.

Line F, seven counted things

A meter beats a price rise, because a buyer can audit what they are paying for. Seven of them, each with its own fee and its own take up.

Meter	Fee	2027	2028	2029	2030	2031
Per entity beyond the first	\$12,000	15%	22%	26%	30%	0%
Per custodian account	\$15,000	10%	16%	20%	22%	0%
Retrieval volume band	\$7,500	18%	26%	32%	35%	0%
Per connector	\$15,000	20%	28%	34%	38%	0%
Twenty four hour retrieval window	\$30,000	3%	5%	7%	8%	0%
Seventy two hour retrieval window	\$12,000	9%	13%	16%	18%	0%
Evidence page and manifest	\$18,000	9%	13%	16%	18%	0%
TOTAL LINE F		\$167,700	\$1,706,681	\$5,897,543	\$11,467,739	\$17,035,003

Legend. The year columns are take up, being the share of billed customers carrying that meter. Partners resell the platform and are not metered. The twenty four hour window is the highest priced meter because it constrains how the platform is run, not because it is the hardest to build.

6 The services, none of it recurring

What we sell	2027	2028	2029	2030	2031	Five year
Implementation	\$840,000	\$2,178,000	\$3,496,000	\$3,546,000	\$4,156,000	\$14,216,000
Readiness programme design	\$70,000	\$280,000	\$560,000	\$770,000	\$875,000	\$2,555,000
Remediation	\$0	\$135,000	\$315,000	\$450,000	\$540,000	\$1,440,000
Examination response	\$30,000	\$240,000	\$600,000	\$960,000	\$1,200,000	\$3,030,000
TOTAL SERVICES	\$940,000	\$2,833,000	\$4,971,000	\$5,726,000	\$6,771,000	\$21,241,000

Legend. Two of the six original service lines moved into recurring revenue. Historical migration became Line C, because it is sold against a duty rather than a project brief, and connectors became a named meter inside Line F, because a customer on three banks and two processors pays for five connections whether or not anybody is doing project work that year.

What each line is worth, and what happens when one is switched off

Every line carries a switch. These are the lines ranked by 2031 revenue, and the four checks the workbook runs on the shape of the mix.

Line A, subscription		\$52,279,213	the daily record
Line F, retrieval and meters		\$17,035,002	seven meters
Line E, second regulator		\$13,766,768	quoted switched off
Line D, review and report packs		\$10,346,902	filings owed on a date
Services		\$6,771,000	none of it recurring
Line B, retention and archive		\$3,136,752	survives Line A
Line C, evidence reconstruction		\$1,941,305	built to expire

Bars start at zero and run to \$52,279,213, the 2031 subscription. Together they are total revenue of \$105,276,946.

7 The four checks on the shape of the mix

The subscription carries most of the recurring revenue, but not all of it

Above eighty per cent, the lines sold alongside it are not doing their work. In 2031 the subscription is 54.1 per cent of recurring revenue.

The meters stay under a third of revenue

Line F is the least evidenced part of the build. Above thirty per cent of revenue the plan would be leaning on the assumption with the least support behind it. In 2031 it is 16.2 per cent.

Evidence reconstruction is smaller in 2031 than in 2028

It falls from \$2,466,000 to \$1,941,306. If it were growing, the discount ladder or the attachment ramp has been set wrong.

The second regulator stays under fifteen per cent of revenue

It reaches 13.1 per cent in 2031. Above that the plan turns on a share for which no published Canadian figure exists.

Recurring revenue is \$96,564,640 of \$105,276,946 in 2031.

The recurring share runs from 54.3 per cent in 2027 to **91.7 per cent** in 2031, and annual recurring revenue at the 2031 year end is **\$108,935,933**, which is what the business is worth a multiple of.
