

Who we can reach, and how we reach them

The contact workbook holds 1,886 named payment firms, 226 named contacts across 86 credit unions and community banks, 162 finance and leasing members and nine brokerage head offices. None has been contacted. This document sets out what the list contains, the filter that has to be applied before a single call is made, the five routes in, and what a qualified answer looks like at the end of each one.

1,886

NAMED PAYMENT FIRMS ON THE REGISTER AND IN THE QUEUE

~702

OF THEM LIKELY TO OWE THE DUTY

226

NAMED CONTACTS AT 86 INSTITUTIONS

20

CALLS THAT SETTLE THE FIRST QUESTION

0

CONTACTED AS AT AUGUST 2026

1 What the workbook holds, sheet by sheet

What it is	Named	Where it came from	Class
Registered payment service providers	1,472	Bank of Canada public register. Numbered shells with no trade name, the Big Six and their affiliates, and the global card networks are excluded	Primary
Payment service providers in the application queue	414	Bank of Canada list of applicants, on the same exclusions	Primary
Credit union and community bank contacts	226	Prior research file. 86 institutions, with role, province, size band and a contact route on each row	Secondary
Finance and leasing members	162	Canadian Finance and Leasing Association listing, lessors and captive finance arms only	Secondary
Brokerage head offices	9	National and major regional networks. The sector ranks 31st of 34 on the market entry matrix	Secondary
Channel and collaboration organisations	6	Named for partnership, infrastructure or referral rather than as buyers	Secondary
Named rows in the workbook	2,289	Every one carries an outreach status, and every one currently reads not yet contacted	

Legend. The workbook is the working file and this document is the plan against it. Source: 4orm Finance outreach contact workbook, 5 August 2026, read against 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full.

The filter that has to be applied before the first call

This is the most useful thing in the workbook and it is not in it. The register carries 1,562 registered providers and **745 of them report holding end user funds**. Holding the money is what triggers the duty. Being registered does not. On the register's own ratio, about 702 of the 1,472 named firms in the workbook owe the daily duty and about 770 do not, and nothing in the workbook's own columns tells you which is which.

FROM THE WORKBOOK TO THE FIRST PAYING CUSTOMER

Named on the register and in the queue		1,886 firms	the workbook
Likely to hold end user funds		about 702	the filter below
Reachable inside one quarter		about 200	at the stated cadence
Discovery calls that settle it		20	milestone, Q4 2026
Design partners live in production		2	milestone, Q1 2027
First paying subscription customer		1	milestone, Q1 2027

Bars start at zero and run to 1,886. The step from 1,886 to 702 is a data step rather than a sales step: it is applied by reading the holding of funds flag off the registry feed and writing it onto every row, once, before any outreach begins. **Calling a firm that does not hold end user funds is the single most expensive mistake available on this list**, because it burns the one thing a first call has, which is the buyer's assumption that the caller has read the register. Source: 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, population register tab, and 4orm Finance outreach contact workbook, 5 August 2026.

1

Do this first, once

■

Pull the holding of funds flag from the registry feed and write it onto all 1,472 registered rows.

■

Split the file in two. Only the fund holders are called on the duty. The rest are a later conversation about a duty they do not yet carry.

■

Re-pull before each calling block, because the register is a live search rather than a fixed page.

2

What the same pull settles

■

The queue moved from 423 applicants on 5 August to 459 ten days later, which is 36 firms in ten days.

■

The registered count moved from 1,520 to 1,562 across the same period.

■

A list read once is a list that is wrong within a fortnight, and every row in the workbook carries the date it was read for that reason.

Who is actually on the register, and when they arrived

REGISTRATIONS BY MONTH, ALL 1,472 NAMED FIRMS

Bars start at zero and run to 438. The first month carries the firms that registered when the regime opened. **The register has added an average of 131 firms a month across the last six months** and has not slowed, which means the addressable named list grows faster than a two person calling effort can work it. Source: 4orm Finance outreach contact workbook, 5 August 2026, registration dates as published.

WHERE THE REGISTERED FIRMS ARE HEADQUARTERED

Bars start at zero and run to 1,265. **207 of the 1,472, or 14.1 per cent, are headquartered outside Canada** across nineteen countries. A foreign head office does not remove the duty and it does change who answers the phone, what time zone they answer in, and whether the compliance decision is made in Canada at all. Source: 4orm Finance outreach contact workbook, 5 August 2026.

Twenty nine of the 1,472 are flagged as recognised brands.

Affirm, Berkeley, BitPay, Chexy, Dream Payments, Everlink, Flexiti, Float, Helcim, KOHO, Lightspeed, Loop, Neo Financial, Nuvei, Payfirma, PaymentEvolution, Plooto, Rotessa, Sezzle, Shakepay, Splitit, Trolley, Versapay, VoPay Financial Canada, VoPay International, Wagepoint, Wave, Wealthsimple Payments and Zum Rails. Twenty six are Canadian headquartered. They are flagged because a recognised name answers a call, not because they are better prospects: a firm this size is more likely to have built something in house, which is the question the first call asks rather than assumes.

The credit union contact book, and how to read it

226 named contacts across 86 institutions: 163 credit unions, 33 Schedule I banks and the balance across cooperative groups, federal credit unions and crown corporations. 136 of the contacts sit at institutions above a billion dollars in assets and 90 below it. **This is the only segment in the workbook where a named person exists.** The names, direct lines and published profiles stay in the workbook and are not printed in any document that circulates.

CONTACTS BY PROVINCE

CONTACTS BY ROLE

Both charts start at zero. **Ninety of the 226 are chief executives and only ten sit in risk and compliance**, which decides the shape of the first message: at this size the person who owns the duty and the person who answers the phone are frequently the same person, and a message written for a compliance department will miss. Alberta at 21 contacts is the home market and the first reference. Source: 4orm Finance outreach contact workbook, 5 August 2026, credit union sheet.

Credit unions are not one of the five register tiers, and the call is made on a different basis.

They do not carry the retail payments safeguarding duty. They are on the list because they hold money for other people under their own rules, because two of them carry published penalties for weak money laundering work, and because a credit union sits in front of the regulated businesses that bank with it. The first conversation is a channel conversation, not a duty one, and the document that opens it is different.

What may be sent, and on what basis

Canada's anti-spam law governs a commercial electronic message sent to an electronic address, and a business address is not exempt because it is a business address. One of the grounds below has to apply before the first message is sent, and which one applies has to be recorded on the row before it is sent rather than reconstructed afterwards.

Business to business	Both organisations have an existing relationship and the message concerns the recipient organisation's activities. Where this applies, no consent, sender identification or unsubscribe mechanism is required.
Implied consent, conspicuously published	The address was published conspicuously by the contact or their organisation, on their own material rather than through a paid database, with no stated objection to receiving messages, and the message is relevant to their role. This is the ground most of this workbook stands on.
Implied consent, business card	The contact handed over a card, the message relates to their role, and they did not object to promotional messages at the time.
Existing business relationship	A prior purchase, contract or inquiry inside the applicable window.
Referral	The first message follows a qualifying referral, names the referrer, and carries the referral statement.
None of the above	Express consent has to be obtained before anything is sent. There is no sixth route.

1

What has to be kept, per row

- Where and how the address was found, and the date it was obtained.
- Whether the publication was conspicuous, and whether any statement objecting to contact was present.
- How the message was judged relevant to that person's role.

2

What the status column is for

- Every row reads not yet contacted today. Holding valid contact information is not the same as having sent anything.
- The column turns as soon as a row moves off that value, which is the record that a message was sent and when.
- A row without a recorded basis does not get a message. That rule costs nothing today and is close to unreconstructable later.

The five routes in, ranked by what each one costs

Route	Who it reaches	What it costs	Where it sits
Direct off the register, fund holders first	About 702 named firms that hold end user funds today	One person's time, and a data pull that has to happen once	This quarter. It is the only route with a named, public, countable population behind it
The application queue	459 firms waiting on a decision, 414 of them named	The same calls, filtered. No new list work	This quarter, alongside the first. A firm that is not yet operating can install a way of working rather than replace one
The reviewer channel	About 120 firms that perform the outside review, no published roster	Building the roster, and a free workspace that is a real cost carried as channel cost rather than as a discount	Starts now, converts slowly. It is the one route that raises capture and lowers cost at the same time
Associations and infrastructure partners	Six named organisations reaching credit unions, lessors and mortgage brokers	Relationship time, and a margin on whatever they bring	Opens now, produces later. Partner origination has to reach 51.6 per cent of new business by 2031
Warm, already in conversation	The handful of live conversations on the file	Nothing, and that is the risk. A warm conversation with no dated next step is not a route	Convert to a design partner arrangement rather than to a sale

Legend. Ranked by cost rather than by size. The first two routes carry the first two years and the third and fourth have to carry the rest, which is what the channel arithmetic on the next page is about. Source: 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, channel and sales, cohorts and population register tabs.

The reviewer channel is the one route that has never been tested, and the plan depends on it.

About 120 firms perform the outside review that the rules require, each sitting in front of dozens of obligated businesses. No roster is published anywhere, so the roster is work rather than a lookup. No reviewer has yet used the evidence pack in a live engagement. That is the one structural condition the core market does not meet, and it is why a rehearsal in 2027 matters more than the milestone that sits in 2028.

SOURCES ON THIS PAGE

The five populations	745 fund holders, 459 in review, about 120 independent reviewers with no published roster, and 800 partner and white label entities. 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, population register tab.	MODEL
Reviewer independence	The reviewer must not have participated in establishing, implementing or maintaining the framework being reviewed, which is why reviewers are excluded from any revenue share. Justice Laws Canada	PRIMARY

The arithmetic the list has to satisfy

The plan asks for 970 signatures across five years, and the list is only the first half of the answer. The other half is who brings the customer. Partner origination rises from a fifth of new business in 2027 to just over half by 2031, which means **the direct list carries the early years and the channel has to carry the later ones**, and the channel does not exist yet.

Year	New customers required	Brought by a partner	Left for the direct team	Quota heads funded	Direct logos per head
2027	69	20%	55	3	18
2028	184	35%	120	8	15
2029	259	45%	142	10	14
2030	214	50%	107	9	12
2031	244	51.6%	118	10	12

Legend. New customers required includes replacing everyone who leaves. Partner margin is ten per cent of the revenue a partner brings, held for as long as that customer stays, and independent reviewers are excluded from it. Source: 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, cohorts, channel and sales, and team roadmap tabs.

1

What this means for the list

- The named register is enough for 2027 and 2028 and is not enough after that. About 702 fund holders against 55 and then 120 direct signatures is workable.
- From 2029 the direct team is asked for 142 signatures against a fund holding population that is being worked for the third year running.
- That is the year the channel either exists or the plan reprices.

2

What is measured, not counted

- Partner sourced qualified opportunities, never partner logos. A directory of signed partners who introduce nobody is the failure mode.
- Signatures monthly against the annual plan, so a shortfall shows in the first quarter rather than the fourth.
- Time from signature to a first signed reconciliation, from customer one. The gross margin case rests on it and it cannot be modelled.

SOURCES ON THIS PAGE

The channel	Partner origination of 20, 35, 45, 50 and 51.6 per cent at a ten per cent margin, with reviewers excluded. Quota carrying heads of 3, 8, 10, 9 and 10. 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, channel and sales tab.	MODEL

What each segment is told, and what a qualified answer is

Segment	What is sold	The proof it needs	A qualified answer
Fund holders already registered	The daily record of whose money is whose, then the framework, the testing, the notices and the 31 March return	A worked example of one day, reconstructed twenty months later, with the rule version that applied on that day	They name who signs the daily reconciliation today and how long it takes to produce twelve months of it
Firms in the application queue	The same thing sold earlier, as a way of working installed before day one rather than a duty already being missed	The same worked example, plus what the register asks of a firm before it is approved	They give a target date for their own registration and say who owns the framework
Independent reviewers	The workspace for the review itself, laid out from the rule, free, with read only access scoped to one client	The evidence pack in the format a reviewer would receive it, on a real customer's records	One reviewer agrees to read a pack on a design partner's records before they are asked to recommend anything
Credit unions and community banks	Nothing, in the first conversation. What the product does, what an examiner asks for, and whether their own regulated clients need it	A one page account of what the duty is and who it lands on, written for somebody who does not carry it	They name a regulated client of theirs who does carry the duty, or they ask for something in writing to take to an internal team
Associations and infrastructure partners	A route to their members, priced as a margin on what they bring rather than as a fee they pay	The margin, the attach rate and what the partner is expected to do, in writing before anything is announced	A named person owns the relationship on their side and a first introduction is dated

Legend. The proof column is the part usually missing. Every one of these conversations ends in a request to see something, and the thing being asked for is the same in four of the five. Source: 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, milestones tab, and 4orm Finance Technology Overview 03.1, 17 August 2026.

A qualified answer is a fact, not a feeling.

Interest without urgency is what a compliance buyer expresses when nothing is due. Every row above ends in something that either happened or did not: a name, a date, a document requested, or a number. The twenty discovery calls settle one question and it is not whether the market likes the idea. It is what share of the counted firms will agree to pay, and how long a new customer waits for their first signed reconciliation.

The sequence, and what is either done or not done

When	What happens	Done means
Before any call	The holding of funds flag is written onto all 1,472 registered rows and the file is split in two. The anti-spam ground is recorded on every row that will receive a message	Two files exist, and no row without a recorded ground has been messaged
This quarter	Twenty discovery calls off the register and the queue, weighted to fund holders, run as a check on willingness to pay rather than as a pipeline exercise	Twenty calls completed, every objection logged verbatim, and the log reviewed monthly rather than at quarter end
This quarter	Two design partners scoped, signed and scheduled, chosen from the mid market band rather than from whoever is available	Both are signed with a dated production plan. A partner without one is not a partner for tranche purposes
This quarter	The reviewer roster is built from scratch, because none is published, and three conversations are opened	A roster exists with more than a handful of names on it, and three firms have taken a call
Q1 2027	Both design partners live in production, and the first paying subscription customer signed at list price	Live in production is a different milestone from signed, and the money releases on the second
During 2027	One reviewer reads an evidence pack on a design partner's records, as a rehearsal rather than as the milestone	A reviewer has read a real pack and said what was missing from it
Q1 2028	Ten paying, deployed customers who will take a reference call	The milestone the whole plan turns on. Not revenue, not pipeline, not letters of intent

Legend. Each row is written so it is either true or it is not. Source: 4orm Finance master pro forma rebuild of 16 August 2026, base case, recalculated in full, milestones and capital structure tabs.

Three of these fall before the money that funds the rest of them.

The architecture note, the twenty discovery calls and the two design partners all gate the next instalment of capital, and none of the three is expensive. All three are cheaper than finding out later, which is why they sit before the build deposit rather than after it. The calling work on this list is not a sales activity in 2026. It is a gating condition.

The six organisations that reach further than we can

Central 1 Credit Union	Payments infrastructure and settlement for the British Columbia and Ontario credit union system, processing more than 645 million payments a year for roughly 280 to 295 financial institutions. It reaches more institutions in one conversation than the whole credit union contact book. Its transfer of digital banking operations covered more than 170 credit unions and banks (Intellect).
Everlink Payment Services	Credit union owned shared payments infrastructure, switching for automated tellers and debit. An integration and collaboration route rather than a sales target.
Canadian Finance and Leasing Association	The association behind the 162 member companies already in the workbook. Sector wide introductions and events reach the whole list at once rather than one company at a time.
M3 Financial Group	Canada's largest non-bank mortgage originator holding company, roughly 8,300 brokers and more than \$60 billion funded annually across five brands. Mortgage administration is a trust account duty under a different regulator.
Dominion Lending Centres	Canada's largest mortgage brokerage network, roughly 380 offices and more than 7,500 brokers. The same route into the same second duty.
Interac	The national interbank payments network, owned by its member financial institutions. Relevant for interoperability rather than as an outreach target, and the ownership structure is the reason.

A partner conversation is a different document and a different first meeting from a customer conversation.

A customer is asked what they hold and who signs for it. A partner is asked what their members are already asking them for, and whether a margin on something their members need is worth their name on it. Nothing is announced until the margin, the attach rate and what the partner actually does are agreed in writing, because a partner announcement without those three is a logo and the plan does not count logos.

What this list cannot do

Seven gaps, each of which changes how a row should be used. None of them is a reason not to start calling and all of them are reasons to record what is learned as the calls happen.

The gap	What it means in practice
The workbook carries no holding of funds flag	1,472 registered rows and no column saying which of them owe the duty. About 770 of the names do not. The flag exists on the registry feed and has to be written onto the file before the first call
No contact name exists for any payment firm	The two register sheets carry a company, a legal name, a country and a date. Not a person. The first call finds the office, and the office is the unit the plan works in
No roster of independent reviewers is published anywhere	About 120 firms, and the count is a management estimate rather than a list. The route the plan leans on hardest is the one with no directory behind it
Seven of the 414 named applicants are numbered companies	A numbered company with no trade name cannot be researched before the call, and it cannot be qualified from the register alone
No national count of property management brokerages exists	3,500 is a management estimate, and 3,100 of them sit in the smallest tier. The second duty is reached through an owner network rather than through a list, because there is no list
The brokerage sheet ranks 31st of 34	Nine head offices, held for completeness rather than as a near term priority. It should not consume calling time this year
The credit union book holds named people and the payment lists do not	Two different standards inside one file. The named contacts stay in the workbook, are used under a recorded anti-spam ground, and are not printed in any document that circulates

What gets measured while the calling happens

Calls completed, weekly	Against twenty by the end of the quarter. Fewer than twenty completed, or calls skewing toward polite interest rather than a budget holder, is the early and cheap signal to revisit the segment assumptions before more capital goes against them.
Every objection, logged verbatim, reviewed monthly	Not summarised. Watch specifically for deferral language, and treat an early cluster of it as the signal to lead with the daily duty rather than waiting for urgency to arrive on its own.
Willingness to pay, named on every call	The card is \$29,450 for a small firm, locked at \$36,813 for a firm signing from 2028. Ask the number. A call that ends without a reaction to a price has not settled anything.
Days from signature to a first signed reconciliation	From customer one, not from customer twenty. It appears nowhere in the arithmetic because it can only be observed, and the whole gross margin case rests on it.
Partner sourced qualified opportunities, quarterly	Opportunities and conversion, never partner logos. Against 20 per cent of new business in 2027 rising to 51.6 per cent in 2031.
Anti-spam ground recorded, per row, before sending	Where the address was found, when, whether the publication was conspicuous, whether any objection was present, and how the message was judged relevant to that role.

Two numbers come out of this list, and both of them decide the plan.

The first is what share of the counted firms will agree to pay, which is why twenty calls come before the build rather than after it. The second is how long a new customer waits for their first signed reconciliation, which cannot be modelled and can only be measured. Everything else on these pages is in service of producing those two answers earlier than the plan assumes they will arrive.
