

What May Be Said About the Build, and Where

An application covering the evidence store is in preparation with counsel and carries no filing date. Until a date exists, every document 4orm Finance puts out about the technology is written against this sheet.

None	1	3	7
FILING DATE ON RECORD TODAY	MECHANISM UNDER THE FENCE	TIERS OF READER ABOVE IT	PIECES OF DETAIL HELD

1 The three tiers

Tier	Who reads it	Released on	Document
Open	Any member of the data room, an investor at first contact, a channel partner	Nothing. Written as though it were public, because in effect it is	03.1 Technology Overview
NDA	A build partner, a customer's security reviewer, an investor in diligence	A countersigned mutual NDA	03.2 Technical Architecture
Counsel	Patent counsel, the named inventors, the company's own file	Nothing. It does not leave the company	Invention Disclosure Record

Legend. Tier is a property of the reader, not of the document. The same pages handed to somebody who has not signed drop to the open tier, whatever is printed on them.

The fence is narrow on purpose.

One mechanism is fenced by the application. Everything else is fenced by contract and by the order the work is done in. Treating the whole architecture as secret would make the room unreadable and would protect nothing.

A room reader is a public reader. The data room gates on membership, not on a signature, so a document a member opens without an NDA behind it counts as a disclosure to the public, whatever the cover page says. Every rule on this sheet follows from that and from the absence of a filing date.

The one mechanism under the fence, and the seven pieces held

May be said at every tier

- A stored record cannot be changed and cannot be deleted.
- A correction stands beside the record it replaces, which stays readable.
- The claim is proved by exporting the same month twice, a year apart.
- Every record carries the day it is about and the day it was written.

Held until counsel files

- The fingerprint fields, and the pairing that locks one record to the last.
- Where the chain is anchored, and how often.
- How a correction is admitted into a store that permits no change.
- How a record is serialised so two exports land on the same bytes.
- What a seal fixes, and how a late arrival is taken after it.
- How one key for each customer sits beneath the chain.

OPEN ITEM, FOR COUNSEL, BEFORE FILING

The 21 page Architecture Pack is dated 5 August 2026. The mutual NDA with Speer is dated 13 August 2026. If the pack reached any reader in the eight days between those dates, it went out carrying six of the seven held items with a cover marking rather than a signature behind it. Who received it, on what date, and what was signed at the time, wants to be on the file before the application goes in.

Say the outcome, never the method.

The open tier is allowed to be persuasive. It states what the system refuses to do and how a reader can test the refusal. It stops at the line where a competent engineer could build the thing from the page.
