

Two Documents for Every Claim

Each subject in the room exists twice. A summary of one or two pages states the claim, carries the figures that matter and links each one to its source. Behind it sits the full document, which shows the working. A reader who accepts the summary never has to open the second file, and a reader who does not can go straight to the evidence.

11

SUBJECTS, EACH WITH A SUMMARY AND A FULL

22

DOCUMENTS IN THE FINISHED ROOM

6

BUILT AND PASSING THE GATE TODAY

4

BLOCKED, EACH FOR A NAMED REASON

1 How the pair works

The summary, one or two pages

It states the claim in the title, so a reader knows what the document argues before opening it. Every figure carries a live link to its source. It closes with a read more line naming the full document. And it is sendable on its own, by mail, without room access.

The full document

It shows the working: tables, charts and comparisons rather than paragraphs, on the principle that a wall of bullets is a failure. It carries a source block on every page. It states its own limits, closing with what the evidence does not prove. And it stays under twelve pages.

A reader should be able to stop after two pages and still be persuaded

The summary carries the argument. The full document exists so that a reader who wants to challenge a number can find it, not so that anyone is required to read it. Twenty two documents, and a reader is expected to open three.

2 The rule that was added on 17 August

No document enters the room carrying a regulatory claim that has not been read at its source. This was added because three documents already in the room asserted a statutory deadline that the regulation does not contain, and one of them attributed it to a regulator page that does not carry it. A claim marked Primary that is not in the primary source is worse than an unsourced claim, because it survives the one check a careful reader makes.

3 Folders 01 to 03

No.	Subject	Built from	Status
01.1	README and how to read the room	Written last	To build
01.2	One page teaser	Business plan	To build
01.3	Investor presentation	Held in a separate workstream	Elsewhere
02.1	Market size, total, serviceable and obtainable	Market size paper of 15 August	Blocked
02.2	The obligated population, 745 named firms	Disruption benchmark, source register	To build
02.3	Capture precedent, what registry-defined mandates deliver	Precedent evidence	Built 17 Aug
02.4	The disruption benchmark	Disruption benchmark	To build
02.5	Market capture and share	Capture and share model	To build
02.6	Competitive landscape	Business landscape, disruption benchmark	To build
02.7	The obligated segments, beyond payments	Business landscape	To build
03.0	Disclosure control	Source register	Built
03.1	The regulatory clock	Source register, business plan	Built 17 Aug
03.2	Primary source index	Source register	Blocked
03.3	The enforcement record	Source register, risk briefing	Built
03.4	Regulatory risk, the other side	Precedent evidence, source register	Blocked
03.5	Exposure across money laundering and securities oversight	Risk briefing	To build

Legend. Built means the summary and the full document both exist and have passed the house gate. Built 17 Aug marks a document rebuilt today against a verified source. Blocked means something has to be resolved before the document can state what it states. Elsewhere means it is produced in a separate workstream.

Three statuses changed today. 02.3 was marked built on 16 August while twenty four unresolved verify chips were printing as the word VERIFY in its output, and while its headline target contradicted the master pro forma; it has been rebuilt and now passes. 03.1 has been rebuilt onto the duty that is actually in force. 03.2 and 03.4 each carry one row of the withdrawn claim and are blocked until re-cut.

4 Folder 04 and the evidence appendix

No.	Subject	Built from	Status
04.1	The revenue lines	Revenue line specification	To build
04.2	Pricing and expansion	Premium pricing paper	Blocked
04.3	Performance evidence and the dual case	Performance evidence guide	Blocked
04.4	The model decisions and what they moved	Model decision packet	To build
A.1	Master source register	Already built, carried as is	Carry
A.2	Validation sourcebook	Internal quality record	Internal only
A.3	Business plan	Business plan	To build

Legend. Folders 05 Investment and 06 Corporate are produced in separate workstreams and are not listed here.

5 What is blocking four of the twenty two

The market size figure	The 15 August market size paper builds to \$218,582,312 total, \$143,857,527 serviceable and \$10,921,933 obtainable in 2031, across 19,527 firms. The precedent evidence paper and the data room guide both carry \$690,000,000 across 19,113 entities. Nothing numbered 02.1 can be written until one of them stands.
The pricing paper's own base	The premium pricing paper derives its uplift from 411 customers and \$9.18M of recurring revenue. The live model carries 835 customers and \$105,276,946 of revenue at 2031, with \$108,935,933 of annual recurring revenue. That arithmetic has to be rebuilt against the current model before the document is shown to anyone.
The stale revenue figures across the older papers	Four values appear across the uploaded set for 2031: \$8,469,051, \$15,826,838, \$33,100,000 and \$82,246,895. A fifth, \$62,122,127, was the live model until the rate card was reset. The 17 August model is canonical and carries \$105,276,946. Every paper restating an older figure has to be re-cut or withdrawn.
The withdrawn regulatory claim in folder 03	03.2 and 03.4 each state that a first mandatory independent review falls on 8 September 2028 and reads three years back. The regulation names no first date and imposes no lookback. 03.2 carries it inside a row marked Primary, which is the more serious of the two because it invites a reader to check and find nothing there.

6 Three rules the room runs on

One number, one place

Every figure lives in exactly one document, and every other document links to it rather than restating it. Restating is how a room breaks: the conflicts on the previous page exist because figures were retyped into new papers instead of referenced.

Every claim read at its source

Added 17 August. A regulatory claim enters the room only when the statute, the regulation or the regulator's own page has been opened and read. A law firm note is useful for finding the question and is never the answer.

Disclose the weaknesses

The source split is published rather than hidden, the unsourced figures are named one by one in the master source register, and a claim that fails verification is recorded as withdrawn rather than deleted without a word. A reader who finds a disclosed weakness trusts the rest. A reader who finds a hidden one stops reading.

What the link does

A figure that can be linked to a source or to the model carries a live address at the point it is used. A figure that cannot be linked does not get one, and the absence is visible on the page. A link that renders as the word VERIFY is a build failure and the document does not ship.

7 Naming, and what a reader is expected to do

The naming pattern	4orm_Finance_NN.N.SUBJECT_SUMMARY_DDMMYYYY.pdf, and the same name ending FULL. The number sorts the file into its folder and the suffix says which of the pair is open. On a rebuild the date in the filename and the month in the header both change.
Opens the index, picks two or three	One page listing every summary with a single line each. The reader chooses by title rather than reading in order.
Reads a summary, follows read more or does not	Every figure carries a link that opens the source. The full document is linked at the foot of each summary, written for the reader who wants to argue with a number.
Checks a figure	The link opens the regulator page, the filing or the register entry directly. Where a figure has no external source, the master source register says so by name.

SOURCES ON THIS PAGE

Source	What it carries	Class
Bank of Canada, registry data feed	The machine readable payment service provider register, from which the 745 holding of funds count is taken. Open	Primary
SOR/2023-229	The regulation behind folder 03, read in full on 17 August 2026. Open	Primary
4orm Finance master pro forma	The canonical figures: 835 customers, \$105,276,946 revenue and \$108,935,933 recurring at 2031, from the model of 17 August 2026.	Internal
