

The required daily proof a regulated business owes when it holds your money

4orm Finance performs the check, keeps the record, and produces the evidence a Canadian regulator asks for, on the day it was done and under the rule that applied then.

The Challenge Canada Is Feeling

WHAT CHANGED ON 26 MARCH 2026

Bill C-12 brought the amended **Proceeds of Crime (Money Laundering) and Terrorist Financing Act** into force on **26 March 2026**.

- **Penalties rose forty fold.** A violation reaches **\$20,000,000** for an entity and **\$4,000,000** for an individual.
- **A cap tied to size.** Cumulative penalties reach **three per cent of gross global revenue**.
- **A new very serious violation.** A programme that is not **reasonably designed, risk based and effective**.
- **Enrolment becomes universal.** Every reporting entity enrolls with FINTRAC, the Financial Transactions and Reports Analysis Centre of Canada.
- **Compliance orders.** Breaching one is a fresh violation and can cost the enrolment itself.
- **Record keeping reaches further.** Financing and leasing entities must now run a programme and keep the records behind it.
- **No anonymous accounts.** None may be opened where identity cannot be verified or the name is obviously fictitious.
- **Enforcement is moving.** Twenty nine notices in 2025 totalling **\$203.1 million**, against \$19.0 million the year before.

The test moved from whether a programme exists to whether it works.

A penalty is set by the harm caused and the ability to pay, which only helps a firm that can show its work.

Who Does This Impact

WHERE THE OBLIGATION LANDS

The amendments reach every business already caught by the Act, and the enrolment duty extends the money services registration model across all of them.

- **Financial institutions.** Banks, credit unions and trust companies now enrol, not only money services businesses and casinos.
- **Every reporting entity.** Any business subject to the Act must comply, and enrol once the provisions are proclaimed.
- **Professionals.** Lawyers, accountants and real estate agents carry the same compliance duties.
- **Real estate.** Agents, brokers and developers meet client identification and reporting duties on every deal.
- **Financing and leasing.** Newly required to run a compliance programme and keep the records behind it.
- **Mortgage brokers, administrators and lenders.** Already in scope, now enrolled and examined on effectiveness.
- **Virtual currency and stablecoin issuers.** Deemed to be dealing in virtual currency, and caught by the same regime.
- **Government entities and related persons.** Barred from opening an anonymous account or an account for an anonymous client.

The duty is the same shape everywhere it lands.

Know who the client is, watch what moves, report what must be reported, and keep the evidence that each of those was done.

How Does This Impact You

THE PERSON IS ASKED TO PROVE A BALANCE THE FIRM HAS NO RECORD OF

The transfer that does not arrive

Canadians born in countries eligible for development assistance send \$5.2 billion abroad in a year, \$2,855 each. When the provider cannot show whose money is whose, the transfer stops and a family at the other end waits on rent already spent.

The savings nobody can find

More than 100,000 people lost access to over \$265,000,000 when one provider's customer ledger and its partner banks stopped agreeing. The records were so compromised that who owned what became unanswerable.

The account that closes without a reason

A bank is not required to explain a closure and is sometimes prohibited from doing so. Complaints went from 19 in 2019 to 113 in 2023.

The investment that freezes for years

One Canadian lender went into receivership in April 2021 holding **\$2.09 billion** for about 26,000 investors. Expected losses reach \$1.3 billion and those people are still waiting.

The keys nobody wrote down

76,000 investors carried \$169,000,000 of client losses, \$115,000,000 of it attributed to fraudulent trading. No independent daily record existed.

What Everyone Is Saying

A FAILURE TO PROVE WHERE THE MONEY WAS, NOT A FAILURE TO HOLD IT

The regulator	The Bank of Canada makes a payment service provider hold end user money in trust or behind insurance, and warns that deposit insurance is not paid out when the provider itself becomes insolvent.
The bank	The Canadian Bankers Association: “Any decision to close an account is not taken lightly. Banks make these decisions independently, evaluating the risk of their respective clients.” A firm that cannot evidence its risk is priced out.
The government	The Minister of Finance and National Revenue, to FINTRAC on 12 February 2026: illicit financing is “a serious threat to Canada’s economic integrity, and the safety and well-being of Canadians”.
The people	The Ombudsman for Banking Services and Investments took 26,000 consumer inquiries in 2025, up nearly 60 per cent, and opened 6,100 investigations, up 90 per cent.
The press	Three collapses, one shape. An exchange with no ledger, a lender whose reported values were wrong, a platform whose ledger stopped matching its banks.

The Pain Points

WHAT BUSINESSES ARE ACTUALLY FEELING

Penalties larger than the compliance budget	Administrative monetary penalties now reach \$20,000,000 for an entity and \$4,000,000 for an individual, against a function that in a firm of fifteen to eighty people is usually one person’s second job.
Universal enrolment, and keeping it current	Every reporting entity applies, renews, and reports a change in its information, on the footing money services businesses have carried for years. The filing is easy. Proving what was true on the day is not.
Risk based, so a template will not pass	The programme must be tailored to the firm’s own risks and operations. A downloaded manual is now evidence against the firm rather than for it.
Ongoing obligations that never stop falling	A suspicious transaction report within thirty days of forming the suspicion. A large cash transaction report within fifteen days. Beneficial ownership and sanctioned property each run their own clock.
Enforcement tools that escalate	A compliance order can lift a finding from serious to very serious, and breaching one is a fresh violation that can cost the enrolment itself.

This Is Already Happening

THE ENFORCEMENT RECORD, AND WHAT IT COSTS

\$203.1M

PENALTIES ISSUED IN 2025

294

EXAMINATIONS IN A YEAR

18,254

ENTITIES ON THE REGISTER

2,778

ENROLLED WITH FINTRAC
TODAY

- 35 lost their registration in the first quarter of 2026, against 12 in the whole prior year. Rarely for laundering. It follows a deficient programme or a missed thirty day request.
- Only the 2,778 enrolled today are examinable. Enrolment reaches every reporting entity under the Act, a several fold rise in the exposed population.

The same finding capped at \$500,000 before 26 March 2026. Today it is \$20,000,000.
Or three per cent of worldwide gross revenue if larger, and \$30,000,000 for breaching a compliance agreement.

Where The Evidence Of People's Money Lives Today

THE FRAGMENTATION, AND WHAT IS ACTUALLY IN IT

This is not paperwork. It is a named person's address, date of birth, occupation, identification numbers, account numbers and transaction amounts, kept **five years** because the Act says so. In most firms it sits in six or seven places that do not speak to each other.

- A spreadsheet on one person's desktop, with a formula nobody can explain
- The bank account and its statements, downloaded by hand
- Email threads, where the approval actually lives
- A shared drive nobody can lock, date or version
- Personal computers and phones, outside the firm's control
- Paper, in an office somebody has since left
- **Security.** The most sensitive data the firm holds, sitting where it cannot be secured, or even inventoried.
- **Privacy.** The Supreme Court calls financial information part of a person's **biographical core**.
- **Integrity.** Anything can be edited afterwards and nobody can tell, the one thing a reviewer tests for.
- **Time.** One question pulls three or four people off their work for days, and what comes back is an assembly.

One hub, not seven places.

Encrypted, access controlled, dated, signed and **produced on demand**.

SOURCES • [FINTRAC RECORD KEEPING](#) • [PRIVACY COMMISSIONER](#)

Current Solutions In The Canadian Market

WHAT IS ON THE SHELF TODAY

Every row below is sold in Canada today, against FINTRAC’s expectations for reporting and record keeping.

What a firm buys today	What it does well	Where it stops
Money laundering platforms	Monitoring with explainable outputs, sanctions, politically exposed persons and adverse media	Priced for institutions, and it keeps no evidence that the daily duty was done
Governance and risk tools	Policy, workflow, attestation and access control	Built on the American bank model, with no cover of the Canadian payment rules
Filing and reporting tools	Submit the reports at a small firm price	They stop at the filing. No record of the decision behind it that survives
Certification courses	Teach the framework, know your customer and programme structure	Training is not evidence. Nothing is recorded, kept or produced
A spreadsheet and a shared folder	Free, and what most firms actually use	The status quo that fails under review, and the real competitor

Legend. Personal information gathered for these duties sits under PIPEDA, the federal privacy law, wherever it is held.

The 4orm Finance Solution

WHAT WE BUILD

- **CVER, cryptographically verifiable evidence retrieval.** A record of what was held, when, and who confirmed it, that can be proven later to have gone unaltered.
- Six modules on one subscription: the evidence store, the time model, reconciliation and case handling, the obligation library, submission binders, and retrieval with citation.
- The obligation library holds every duty as **dated content**, so a decision made in 2026 still reads under the 2026 rule in 2029.
- Records are added and never changed. A correction is a new record naming what it replaces, so the original always survives.

What we never do

- Never hold or move client money
- Never sign a filing on a customer's behalf
- Never decide anything for the customer

We read the money. We never touch it.

The duty stays with the firm that holds the money, and so does the signature. Nothing 4orm Finance does can put client funds at risk, which is what makes the software buyable by a compliance officer without a treasury review.

Why This Moment Matters

TIMING

8 Sep 2025

The daily safeguarding
duty begins

Aug 2026

Today. Eleven months in,
and nobody has a supplier

26 Mar 2026

Money laundering penalties
rise forty fold

2027

The first paying cohort
off the published register

1

The rule is eleven months old

No firm is locked into a contract yet, so there is no supplier to displace and no renewal date to wait for. That does not last.

2

The buyers sit on a public list

The Bank of Canada publishes the register of payment service providers, with company names on it. There is no list broker to pay and no cold market to work out.

3

The duty is already running

Section 15 has required a daily record of what each end user is owed since 8 September 2025. The regulation names no first date for the outside review, and history nobody kept cannot be recreated afterwards.

What This Actually Does For A Client

THE BENEFIT, IN THE WORDS A CLIENT USES

1 Time back

Compliance stops being rework.
Nobody rebuilds last quarter from email and a spreadsheet, so the hours go back to operations, lending, listings and deals.

2 Peace of mind

The owner knows the proof exists before anybody asks, and the firm is not standing in front of a \$20,000,000 ceiling with an answer it still has to assemble.

3 Everything in one place

The highest risk information in the business, held once, secured, access controlled, and retrievable at the speed of light rather than over days.

Payments and money services	The daily safeguarding check performed, signed and kept, ready for the independent review the rules require.
Credit unions and banks	An examination pack assembled without pulling the branch network off its work.
Auto, equipment, financing and leasing	A programme built to the firm's own risk, with the record that shows it was followed.
Real estate and mortgage	Client identification that survives an agent leaving.

WHEN THE QUESTION COMES FROM THE REGULATORS

Why The Record Of Proof Is The Business

People forget. Staff leave. Systems get replaced. Events go unnoticed. Then the question arrives, and everyone who carries accountability for the answer is in the dark.

What happened?

When did it happen?

What did you do about it?

The only thing between the answer and a compliance infraction is the record.

A record made on that day, kept with the rule it was made under, signed by a named human being, and held by the party it belongs to. That record still answers the question in 2028, in 2031, in court, and to a regulator who was never in the room. **We build those records, hold them securely, and find them at the speed of light when a question arrives.** We do not hold your money, we do not decide whether you are compliant, and we do not certify anything. We keep the proof, so you can reach it the moment evidence is asked for.

Instead of calling a department and asking whether anybody can find out, you say: I will check the form.

That sentence is the whole product.

Executive Overview

WHO WE ARE, WHY NOW, AND WHAT WE ARE ASKING FOR

- **Who we are.** A software company in Calgary, Alberta. We build the daily proof a business owes when it holds money that belongs to somebody else. We are not a bank, we do not move money, and we never touch it.
- **Why now.** Two federal regimes changed inside seven months. The daily safeguarding duty began 8 September 2025 and money laundering penalties rose forty fold on 26 March 2026. The duty falls every morning from here.
- **The opportunity.** A register of **18,254** regulated entities, a recurring addressable market of **\$840M**, and no tool in Canada built for these rules.

The raise

A **\$50,000** angel cheque and a **\$2,050,000** pre-seed in five instalments, the first of them committed at close. Then **\$3,500,000** of seed in 2028, priced on paying customers rather than on a forecast.

Where it lands

The plan reaches **\$105.3M** of revenue and **\$58.4M** of earnings before interest, tax, depreciation and amortisation in 2031, on **835** customers and **47** people, and turns profitable in **2028**.

Who Carries The Duty

WHO IS IMPACTED

Bars start at zero and length is the count of entities, each counted once and sitting in one tier only, **18,254** in total. Payment providers, law and accounting firms, real estate brokerages and developers, financing and leasing entities, mortgage administrators, insolvency trustees, property managers, insurance brokerages, collection agencies and travel registrants all carry a version of the same duty.

A register, not a pipeline.

The count is built from published registries, banded by what a firm can pay. It is the denominator for every customer number in the plan.

Six Modules On One Subscription

WHAT WE SELL

1 The evidence store

Records go in, get dated, and are never changed or deleted. A correction is a new record that names what it replaces.

2 The time model

Two dates on every record: when the thing happened, and when we were told. An old decision reads under the old rule.

3 Reconciliation and case handling

The daily check of the two lists, and the file that follows a gap until it closes.

4 The obligation library

Every duty a firm carries, held as dated content, signed by the regulatory lead before release.

5 Submission binders

The pack a reviewer asks for, built out of records already held, in the shape the regulator publishes.

6 Retrieval with citation

An answer that comes back with the record behind it attached, rather than a summary a firm has to trust.

The modules are priced and metered on their own. The subscription carries **\$52,279,213** of 2031 revenue, the five lines sold alongside it carry **\$44,285,427**, and the sealed page a reviewer is sent to sits inside the meters.

Six Service Lines, None Recurring

HOW THE WORK IS DELIVERED

Service line	What it is	When a customer buys it
Implementation	The software in, first records flowing	Every new customer
Historical migration	Old records in, history searchable	Now sold as evidence reconstruction, and it recurs
FINTRAC readiness	Preparing a firm for the regulator	Before enrolment or examination
Remediation	Repairing a record trail already behind	After a gap is found
Examination response	Standing beside the customer	On demand
Connectors and integrations	Joining a bank or an existing system	Now a named meter, counted per connection

Legend. Four of the six do not repeat, so none of those is recurring revenue. They carry their own delivery cost at 55 per cent of the fee. Services are **\$6,771,000** of the **\$105,276,946** in 2031, and **\$21,241,000** across the five years. Historical migration and connectors moved into recurring revenue, which is why the services column falls as a share of the total while the dollar figure holds.

Four Ways To Size The Same Market

MARKET OPPORTUNITY

Each layer is smaller than the one above it. The top layer assumes every entity buys at list price and is **never** used as the bottom of a capture rate. The figure we work to is the second, **\$840,471,950**, which is \$46,043 of recurring revenue for each entity on the register.

11.5% of the recurring market

By 2031 the plan holds \$96.6M of recurring revenue against an addressable \$840M. Almost nine tenths of the market is still there.

19.7% of the budget qualified part

Measured against the entities that can fund a purchase in the near term, the same revenue is under a fifth.

4.7% of the register by count

865 customers and partners out of 18,254 entities. A share of a counted population rather than a typed number.

What A Customer Pays

PRICING

Tier	The card, held flat	Locked signing in 2027	Locked from 2028	Entities	Who buys here
Command and institution	\$687,000	\$766,005	\$858,750	65	Banks and processors
Enterprise and complex	\$219,500	\$244,743	\$274,375	552	Multi entity firms
Mid market regulated	\$83,250	\$92,824	\$104,063	3,091	Mid market providers
Small regulated firm	\$29,450	\$32,837	\$36,813	13,746	Small providers, brokerages
Partner and white label	\$130,000	\$144,950	\$162,500	800	Reviewers, networks

Legend. The card is held flat for the life of the model and steps once, on 1 January 2028. A firm keeps the price it signed at for as long as it stays, so the 2027 column is a closing price rather than a discount and nobody is ever repriced. The blended step actually realised runs from 1.11 in 2027 to 1.24 by 2031, because the mix of cohorts moves and the card does not. Churn is per tier, not blended: command 3%, enterprise 5%, mid market 8%, small 7%, partner 8%.

Nobody Sells What Sits In Between

COMPETITIVE ADVANTAGE

What a firm can buy today	What it does well	Where it stops
Enterprise money laundering platforms	Monitoring, sanctions, adverse media	Priced for large institutions, and keeps no evidence the daily duty was done
Canadian filing tools	Submit the reports at a small firm price	They stop at the filing. No client money work and no record that survives
Governance and risk platforms	Policy, workflow and attestation	Built for the American bank model, with no cover of Canadian payment rules
Reconciliation and treasury tools	Reconciliation itself	Rule versioning, approval history and regulator facing retrieval are out of scope
Certification and training courses	Teach the rules to the people	Training is not evidence. Nothing is recorded, kept or produced afterwards
A spreadsheet and a shared folder	Free, and what most firms use today	The status quo that fails under review. This is the real competitor

Legend. Where it stops is where the tool stops answering the question an examiner asks. Every category is bought in Canada today.

Product And Technology

HOW IT IS BUILT

Records are append only	Every record goes on the pile, keeps the date it was made, and stays exactly as it was. Nothing is edited and nothing is deleted.
Two dates on everything	When the event happened, and when we were told. That is what lets an old decision read under the old rule eighteen months later.
Grounded retrieval only	An answer comes back with the source records attached. The assistant retrieves and cites; it never decides, and every external output passes a named human approval gate that is logged.
Integrity manifest	Hashing, timestamps and a verification workflow, so a package handed to a reviewer can be proven to be the package that was made.
Canadian residency by design	Stored and processed in Canada, on infrastructure the customer controls, with customer isolation documented rather than asserted.
Independent security review	External penetration testing and architecture review, funded at \$30,000 a year from 2028 and never run by the team that wrote the code.

Traction And The Gates

WHERE WE ARE

- **\$550,000 committed**, the angel cheque and the first pre-seed instalment, as shares bought at a set price, not a loan.
- Build partner engaged, with the intellectual property assignment that pre-seed instalment one is conditioned on.
- Counsel engaged at Osler and Fasken, and the offering documents drafted.
- Eight non-dilutive programmes mapped, worth **\$775,000** across the plan. None is awarded yet. They sit inside the base case, and **\$305,000** of them land in 2026 and 2027.

Gate	What it unlocks
Live evidence record with a real customer's data	Any external product claim
Customer isolated vault and integrity manifest	The verifiable evidence language
Grounded retrieval with citations and approval gate	Module pricing
Five paid customers or signed commitments	The small firm price
Signed partner terms with named first clients	Partner revenue

The institution and original equipment manufacturer platform line carries no revenue in the base case at all. Partner and white label subscription is in the plan from 2027, **\$289,900** that year and **\$1,044,108** in 2028, and it is gated on signed partner terms with named first clients.

Leadership Team

WHO IS BUILDING IT

Chad R. Johnston

FOUNDER AND CHIEF
EXECUTIVE

Kevin Wong

Business Model

HOW THE MONEY ARRIVES

Subscription led

Core plus the lines sold alongside it, billed annually in advance. Recurring is **\$96.6M** of the **\$105.3M** in 2031.

Services that open doors

Four lines, none recurring, at 55 per cent delivery cost. Examination response is bought under pressure and converts.

A partner channel, counted once

Firms served through a partner are already inside the register, so the channel is never added to the direct market.

Roadmap And Milestones

THE PATH

Period	Commercial	Product	Evidence produced
H1 2027	First paying customers off the published register	Evidence store, time model, reconciliation, first connectors	The small tier price, at the card
H2 2027	First mid market customer and first paid reconstruction	Grounded retrieval with citations, approval gate, export pack	The mid market price validated
2028	Seed raised on paying customers. First profitable year	Full duty set, FINTRAC readiness modules, legal holds	65 customers at 2027 close, 238 at 2028 close
2029	Partner channel at scale, enterprise security cycle completed	Open interface, broader connectors, dedicated environment	Enterprise procurement proof
2030 to 2031	Scale across payments, money laundering and trust verticals	Vertical rule packs, verifier access, archive at scale	Full cohort economics, break even passed

The independent review wave is the commercial event that 2027 and 2028 exist to be ready for. The regulation names no first date for it, so the plan sells against the daily record the rules have required since 8 September 2025.

Financial Pro Forma

THE BASE CASE

CA\$ millions	2026	2027	2028	2029	2030	2031	6-YR
Revenue	0.00	3.88	17.75	44.18	73.71	105.28	244.80
Recurring at year end	0.00	4.21	19.49	47.18	75.49	108.94	108.94
Gross margin	0.0%	64.3%	69.9%	73.6%	76.5%	77.6%	75.7%
Operating expenses	(0.48)	(2.79)	(7.09)	(12.73)	(18.04)	(23.26)	(64.39)
Grants and non-dilutive	0.01	0.29	0.21	0.20	0.06	0.00	0.78
EBITDA	(0.47)	(0.00)	5.54	19.97	38.40	58.39	121.83

Legend. EBITDA is earnings before interest, tax, depreciation and amortisation. The 2027 figure is a loss of \$4,315, which rounds to nil here. Eight grant programmes worth \$775,000 are modelled. None is awarded yet, and all of them are inside the base case above.

\$105.3M

REVENUE 2031

\$58.4M

EBITDA 2031, 55.5% MARGIN

2028

FIRST PROFITABLE YEAR

835

CUSTOMERS ON 47 PEOPLE

What One Customer Is Worth

UNIT ECONOMICS

Per customer	2027	2028	2029	2030	2031
Recurring revenue per customer	\$61,033	\$78,544	\$96,399	\$112,889	\$125,906
Cost to win one customer	\$6,142	\$10,696	\$18,896	\$38,818	\$47,560
Lifetime value	\$392,231	\$549,048	\$709,173	\$863,404	\$976,553
Value against cost to win	64x	51x	38x	22x	21x
Customers needed to break even	53	90	108	113	120
Customers live at year end	65	238	473	645	835

Legend. **Cost to win** includes money spent on customers who never signed. **Lifetime value** is gross profit per customer over the life implied by that tier’s churn. The usual test is three times the cost to win.

Gross revenue retention of **93.4 per cent** falls out of the per tier churn rates rather than being typed in. Cohort data replaces it as soon as renewals exist.

The Ten Year Model

FOUR MORE YEARS

CA\$ millions	2032	2033	2034	2035
Revenue growth on the year	30%	20%	15%	12%
Revenue	136.86	164.23	188.87	211.53
EBITDA	70.03	86.55	101.82	116.21
EBITDA margin	51.2%	52.7%	53.9%	54.9%
Net profit after tax	53.98	66.71	78.46	89.54

Legend. Growth steps down every year because the register fills up. Across the ten years the company sells **\$946,349,916** and earns **\$382,655,975** after tax, and closes 2035 holding **\$223,801,747** in cash after every distribution has been paid.

Risk Mitigation

WHAT COULD GO WRONG, AND WHAT IS DONE ABOUT IT

Product does not deliver on the integrity and retrieval claims	Independent architecture and security review before any enterprise sale. Claims stay qualified until the gate that proves them is passed.
Model output is unsupported or mis-cited	Grounded corpus only, source citations on every answer, an enforced human approval gate, and citation accuracy measured rather than assumed.
Implementation is too bespoke	Paid implementation, connector limits, and time to first evidence measured on every customer. Gross margin and growth both depend on this one.
Partners do not activate	Platform minimums and activation milestones. Partner subscription is \$289,900 in 2027 and \$1,044,108 in 2028, so the early plan does not lean on it.
Institution sales cycles run long	The institution and original equipment manufacturer platform line is off in the base case entirely. The command and institution tier carries its own subscription from 2029, on one customer that year.
Break even slips past 2031	The downside scenario governs runway and hiring is gated to revenue milestones rather than to dates.

The Ask

WHAT WE ARE RAISING

- A **\$50,000** angel cheque, already advanced, and a **\$2,050,000** pre-seed in five instalments. The first is priced and committed at close. The rest release against named milestones.
- **\$3,500,000** seed in 2028, priced on paying customers who will take a reference call rather than on a forecast.
- Fits a registered retirement savings plan or a tax free savings account. Governed by Alberta law.
- A \$500,000 borrowing facility sits behind the plan and is switched off in every figure.

Where the money goes

- Product and engineering, the evidence store and the first connectors
- Security and assurance, independent review before enterprise selling
- Go to market against the published register
- Delivery, productised implementation and the first paid reconstruction
- Entity, intellectual property, contracts and claims review

The pre-seed is sized on the base case and a fixed regulatory calendar, never on the premium case.

Development runs to **\$6,736,391** across the plan on the build partner rate card, and **\$825,000** of that falls in the 2026 and 2027 build window.

EVERY DOLLAR OF CAPITAL BACK IN CASH DURING 2029, 15.5X BY 2038

How Long Until The Money Is Back

Line	In	Year	Cash back in full	Years	Cash by 2038	Multiple	A year
Angel	\$50,000	2026	2029, month 4	3.2	\$2,333,119	46.7x	103%
Pre-seed, tranche one	\$500,000	2026	2029, month 8	3.6	\$11,665,597	23.3x	73%
Pre-seed, tranche two	\$500,000	2026	2029, month 8	3.6	\$11,823,617	23.6x	73%
Pre-seed, tranche three	\$500,000	2027	2029, month 9	2.7	\$9,853,014	19.7x	94%
Pre-seed, tranche four	\$500,000	2027	2029, month 10	2.8	\$8,867,713	17.7x	87%
Seed, 2028	\$3,500,000	2028	2030, month 2	2.1	\$41,382,660	11.8x	108%
All investors	\$5,550,000	2026 to 28	2029, month 11	3.8	\$85,925,720	15.5x	58%

Legend. **Cash back in full** is the month the running distribution first covers the whole cheque, and **Years** counts from the year the money went in, which for the pooled row is the first cheque in 2026. **A year** is the compound annual rate of return on the cash alone, each instalment discounted from the year it was actually paid in, shares valued at nothing.

\$5,550,000 IN, AND WHAT COMES BACK

What The Investor Gets Back

Line	Invested	Held after the seed	Price	Cash to 2038	Shares at 8x	On the money
Angel	\$50,000	0.66%	\$0.25	\$2,333,119	\$5,732,435	161.3x
Pre-seed, tranche one	\$500,000	3.29%	\$0.50	\$11,665,597	\$28,662,173	80.7x
Pre-seed, tranche two	\$500,000	3.33%	\$15M ceiling	\$11,823,617	\$29,050,426	81.7x
Pre-seed, tranche three	\$500,000	2.78%	\$18M ceiling	\$9,853,014	\$24,208,688	68.1x
Pre-seed, tranche four	\$500,000	2.50%	\$20M ceiling	\$8,867,713	\$21,787,819	61.3x
Seed, 2028	\$3,500,000	11.67%	\$0.9866	\$41,382,660	\$101,676,491	40.9x
All investors	\$5,550,000	24.22%		\$85,925,720	\$211,118,032	53.5x

Legend. A share bought at \$0.50 is marked at **\$0.9866** by the 2028 seed, which prices the company at \$30,000,000 post-money across 30,406,375 shares. Instalments three, four and five are simple agreements for future equity: no price today, converting at the ceiling shown, the highest valuation they can convert at. **Shares at 8x** is eight times annual recurring revenue at the end of 2031, \$108,935,933. **On the money** adds the cash and that mark, over what went in.

Three Years, Five Years, Ten Years

WHAT THE MONEY COMES BACK AS, ON EACH HORIZON

Line	Invested	Cash by 2031	3 yr	Cash by 2033	5 yr	Cash by 2038	10 yr
Angel	\$50,000	\$703,900	14.1x	\$1,056,719	21.1x	\$2,333,119	46.7x
Pre-seed, tranche one	\$500,000	\$3,519,498	7.0x	\$5,283,594	10.6x	\$11,665,597	23.3x
Pre-seed, tranche two	\$500,000	\$3,567,172	7.1x	\$5,355,165	10.7x	\$11,823,617	23.6x
Pre-seed, tranche three	\$500,000	\$2,972,644	5.9x	\$4,462,637	8.9x	\$9,853,014	19.7x
Pre-seed, tranche four	\$500,000	\$2,675,379	5.4x	\$4,016,374	8.0x	\$8,867,713	17.7x
Seed, 2028	\$3,500,000	\$12,485,103	3.6x	\$18,743,077	5.4x	\$41,382,660	11.8x
All investors	\$5,550,000	\$25,923,695	4.7x	\$38,917,566	7.0x	\$85,925,720	15.5x

Legend. Distributions begin in 2029, so three years runs to 2031, five years to 2033 and ten to 2038. Every figure is cash actually paid, shares valued at nothing and no sale assumed.

The whole distribution goes to the investors until they have had **four times** their money back. The investors hold **24.22%** after the seed, the founding shares 65.78%, which are paid nothing until the hurdle is met, and the option pool 10%, which is paid nothing in any year.

Investment Summary

THE WHOLE DECK ON ONE SLIDE

The chance

- A duty that falls every morning, in force since 8 September 2025
- Penalties up forty fold since 26 March 2026
- A register of 18,254 entities and \$840M of recurring market
- No tool in Canada built for these rules

The model

- Six revenue lines and the services alongside them, on one system
- \$105.3M of revenue and \$96.6M of it recurring in 2031
- 77.6% gross margin and a 55.5% EBITDA margin at 2031
- 835 customers and 47 people, first profit in 2028

The raise

- A \$50,000 angel cheque, already advanced
- A \$2,050,000 pre-seed in five instalments
- \$3,500,000 seed in 2028, priced on proof
- \$775,000 of grants modelled, none awarded yet

The return

- Every dollar of capital back in cash during 2029
- 15.5x in cash by 2038, 58 per cent a year, no sale assumed
- \$85,925,720 of the payout goes to the investors
- The founders wait until the investors have four times back

Built In Canada

JURISDICTION AND SOVEREIGNTY

- Incorporated in Alberta, with a registered office in Calgary.
- Every record stored and processed on Canadian ground, which the Personal Information Protection and Electronic Documents Act makes a purchase requirement rather than a preference.
- The rule content is Canadian and authored in house, signed by a named regulatory lead before release.
- A customer's evidence belongs to the customer and exports on demand, in the shape the regulator publishes.

Sovereignty

Businesses control their own records and their own proof. Nothing they depend on can be taken away by a foreign vendor.

Protection

The people who trust a business with their money are the first ones protected, not the last.

Several of the platforms a Canadian firm could otherwise buy are ruled out on data residency before price is even discussed.

That is a structural advantage for a Canadian evidence custodian, and it is the reason the second regulator and the partner channel both open.

A duty that falls every morning, proved on the day it was done.
